# uniQure N.V. (Nasdaq: QURE)

## Company Update: FY2026E–FY2033E Revenue and EBITDA Forecast and Finagle Run (revision 2b, valuation v4)

*30 October 2026. US$ millions unless a row states patients or a count. Includes a Finagle valuation section, but Finagle flagged every scenario NOT A VALUATION (Section 8); no rating or price target. Forecast: rev2b `forecasts/QURE/forecast.json` (uncommitted); valuation: Finagle v4 run of `valuation_request_v4.json`. Earlier Finagle runs (v1–v3) used older forecasts and are superseded. Numbered sources are in Appendix B.*

## 1. Summary

**FORECAST UPDATE**

■ **The launch network is now about 30 surgical centers, each doing 1–2 procedures a week, per the user's instruction [P5]. Base FY2028E revenue rises to $5,940M, from $511M in revision 2 [C18].** Base treats 518 US patients in H2 2027 and 2,952 in FY2028E [C75].

■ **The source is weaker than the instruction: ClearPoint said in August 2026 that 15 centers had qualified, and that 20–30 centers at 1–2 cases a week would give 50–100 cases a week [G1].** We use 30 at launch as instructed and flag the gap. Utilisation in the first quarters (site activation, surgeon training, referrals) is an assumption [S6].

■ **The ~6,000-patient backlog is cleared in Q4 2029 in base (bull Q4 2029), versus Q2 2035 (bull Q2 2036) in revision 2.** Cumulative US treatments pass 6,000 in Q3 2029. After that, treatments fall to the yearly refill of 1,124 patients [P3][C2], and revenue falls to $2,070M in FY2031E [C21].

■ **EBITDA peaks at $6,910M in FY2029E and settles at a 67% margin [S26][C40].** Opex now includes a $70M-a-year confirmatory study [S1] and $80M of US commercial fixed cost. Hemgenix royalties were sold to HemB SPV and are booked as $473.2M of debt [A14].

**Figure 1 – Base case: patients and financials (FY2026E–FY2032E)**

| Row (units) | FY26E | FY27E | FY28E | FY29E | FY30E | FY31E | FY32E |
|---|---|---|---|---|---|---|---|
| US patients treated (patients/yr) | 0 [C73] | 518 [C74] | 2,952 [C75] | 4,461 [C76] | 1,124 [C77] | 1,124 [C78] | 1,124 [C79] |
| US eligible backlog, year end (patients) | 6,000 [C65] | 5,744 [C66] | 3,456 [C67] | 0 [C68] | 0 [C69] | 0 [C70] | 0 [C71] |
| Revenue (US$M) | 24.9 [C6] | 1,067 [C17] | 5,940 [C18] | 8,963 [C19] | 2,291 [C20] | 2,070 [C21] | 2,073 [C22] |
| EBITDA (US$M) | -161 [C28] | 501 [S24] | 4,395 [S25] | 6,910 [S26] | 1,496 [S27] | 1,302 [S28] | 1,390 [S29] |

## 2. Business Description and Reporting Lines

uniQure is a gene-therapy company. Almost all of its revenue today is royalties on Hemgenix, the haemophilia B gene therapy licensed to CSL Behring [A21]. AMT-130 for Huntington's disease (HD) is a one-time AAV5 gene therapy given by MRI-guided neurosurgery, delivered with ClearPoint Neuro's system. Its BLA and a UK MAA were filed on 2 September 2026 [G12]. The reported lines are license (royalty), collaboration and contract manufacturing revenue. We add AMT-130 product lines for the US and, in bull only, the UK. Genezen makes AMT-130 and gives it preferential access to its plant [G13].

## 3. Management

CEO Matt Kapusta and Chief Customer & Strategy Officer Kylie O'Keefe set out the launch plan, including ~6,000 "initially treatable" US patients [G5][G6]. Management gives no capacity number; it says capacity depends on neurosurgeons and OR suites [G9]. ClearPoint, the delivery partner, has given center counts [G1][G2].

## 4. Key Developments

| Date | Event | Source |
|---|---|---|
| 2025-09-24 | Investor event: ~6,000 initially treatable US patients at launch | [G5] |
| 2026-07-29 | Q2 2026: confirmatory-study design agreed with FDA; runway into 2030 | [G4][A22] |
| 2026-08-10 | ClearPoint: 15 centers qualified, ready for 1–2 procedures a week | [G1] |
| 2026-09-02 | BLA submitted; UK MAA filed, priority review requested | [G12] |
| 2026-10-28 | ClearPoint: approval possible mid to second half of 2027 | [G3] |
| 2026-10-30 | User: ~30 centers at 1–2 procedures a week | [P5] |
| 2026-11-04 | Q3 2026 results due | [S402] |

*Source: company filings and calls; user prompts.*

## 5. Business Drivers by Line

**AMT-130 US: capacity.** Treated = min(capacity, backlog + refill). Capacity = centers × procedures per center per week × 13 weeks × utilisation [S6]. Base starts at 30 centers and 1.0 procedure a week, rising to 2.0. Utilisation is 50% in the first quarter and reaches 100% after a year. Centers grow by 3 a quarter while patients are waiting, capped at 70. The cap does not bind. HDSA has 69 HD centers [A12]. ClearPoint targets 35–40 initial centers with 5,000 patients a year of capacity across all its partners [G2]. We assume vector supply does not bind through FY2029E.

**Figure 2 – Base capacity ramp by quarter (US)**

| Quarter | Centers active (count) | Procedures per center per week | Utilisation (%) | Capacity (patients/qtr) | Treated (patients/qtr) | Backlog at quarter end (patients) |
|---|---|---|---|---|---|---|
| Q3 2027 | 30 | 1.000 | 50% | 195 | 195 | 5,934 |
| Q4 2027 | 33 | 1.125 | 67% | 323 | 323 | 5,744 |
| Q1 2028 | 36 | 1.250 | 83% | 486 | 486 | 5,401 |
| Q2 2028 | 39 | 1.375 | 100% | 697 | 697 | 4,860 |
| Q3 2028 | 42 | 1.500 | 100% | 819 | 819 | 4,214 |
| Q4 2028 | 45 | 1.625 | 100% | 951 | 951 | 3,456 |
| Q1 2029 | 48 | 1.750 | 100% | 1092 | 1092 | 2,578 |
| Q2 2029 | 51 | 1.875 | 100% | 1243 | 1243 | 1,576 |
| Q3 2029 | 54 | 2.000 | 100% | 1404 | 1404 | 441 |
| Q4 2029 | 57 | 2.000 | 100% | 1482 | 722 | 0 |
| Q1 2030 | 30 | 2.000 | 100% | 780 | 281 | 0 |
| Q2 2030 | 30 | 2.000 | 100% | 780 | 281 | 0 |

*Source: assumptions [S6] anchored on the user [P5] and ClearPoint [G1]; backlog per [G5][C2][S5].*

**Demand.** The backlog starts at 6,000 [G5]. Each year adds the refill: incidence less a few for eligibility, willingness and coverage [P3]. The untreated backlog loses 10% a year [S5].

**Price and recognition.** Base net price is $2.0M through FY2030E, then 10% lower from FY2031E once US sales have passed $2B a year [S10]. Bull is $2.4M, stepping down from FY2028E [S11]. For comparison, list prices are $4.25M for Lenmeldy, $3.95M for Kebilidi, $3.2M for Elevidys and about $3.5M for Hemgenix [A13]. We recognise revenue at treatment [S401].

**Costs.** COGS per patient is $0.30M at launch, falling to $0.20M; it is unverified [S12]. No AMT-130 licensor royalty is disclosed [A15]. Opex is the Q2 2026 run rate [A22], plus US commercial fixed cost, per-center cost, and the confirmatory study [S1].

**Hemgenix royalties.** These stay in revenue and EBITDA, growing to $52.2M in FY2033E [S20]. The cash goes to HemB SPV until 1.85× the upfront ($693.8M) is repaid by mid-2032, or up to 2.25× through 2038 [A14]. For valuation, treat the $473.2M liability as debt.

## 6. Risks

**Center count.** The user's 30 compares with 15 qualified by ClearPoint in August 2026 [G1]. Fewer centers or lower utilisation push treatments later. They do not change the total.

**Refill.** If refill is 30% of incidence, it falls to 490 patients a year, and FY2031E base revenue falls to $929M. This is the key open question (Figure 5).

**Approval timing.** If approval comes in Q4 2027, FY2027E base revenue is $420M and the backlog clears one quarter later (Figure 5).

**Payer budget.** Base US spend peaks near $8.9B in FY2029E, a single year of backlog clearance. That invites managed access.

**Consensus.** FY2027E base revenue is 9.4× consensus. It is not scaled, because the user's capacity instruction overrides consensus [C202]. Goldman's reported peak is $2.5B [E6].

**Figure 5 – Sensitivities (US patients; US$M)**

| Case (units) | FY27E | FY28E | FY29E | FY30E | FY31E | FY32E | FY33E |

# 8. Valuation – NOT A VALUATION

**Finagle flagged all three scenarios `not_a_valuation: true`. The per-share figures below are mechanical outputs of default policies that misfire for this company, not values we stand behind [D30].** Raw values per share (FCFE, equal to DDM; no post-run adjustment): base $226.87, bull $663.39, bear -$18.51, vs. a price of $25.30 on 2026-10-30 [D30]. The v3 run on the older forecast gave $97.40 / $221.53 / −$18.09 [D32].

Reasons, in Finagle's words:

- **base:** default SBC (year-0 SBC/EBITDA ratio) goes negative: min -798.9; negative cash (unfunded; no funding policy); HemB SPV royalty liability 473.2 not in debt (Finagle default debt 49.699) while royalties stay in EBITDA. Sanity flags: negative cash, negative FCFE after year 1. Validation warning: average EBITDA growth is 42.9% and there are no acquisitions. If that growth includes acquired EBITDA, use an organic path and book the purchase price with acquisitions, or MnA stays zero.
- **bull:** default SBC (year-0 SBC/EBITDA ratio) goes negative: min -1389.0; negative cash (unfunded; no funding policy); HemB SPV royalty liability 473.2 not in debt (Finagle default debt 49.699) while royalties stay in EBITDA. Sanity flags: negative cash, negative FCFE after year 1.
- **bear:** negative capex in forecast years; negative cash (unfunded; no funding policy); HemB SPV royalty liability 473.2 not in debt (Finagle default debt 49.699) while royalties stay in EBITDA. Sanity flags: negative cash, negative FCFE after year 1.

**Terminal growth is Finagle's default, not ours.** Finagle set terminal growth to its risk-free-based default of 4.99% [D30]. The forecast's own next-period growth is 0.08% in base, 0.02% in bull and 3.00% in bear [D31]. For a one-time therapy whose sales fall to a refill level after the backlog clears, a ~5% perpetual growth rate is far above the forecast and inflates the terminal value.

**Debt path.** The user asked to hold debt until EBITDA is positive, then target 1x EBITDA [P103]. Base debt rises with EBITDA to a peak of 6,910 in FY2029E, then falls only slowly while EBITDA drops to about 1,400. Debt is 3.6–4.9x EBITDA from FY2030E to FY2035E (max 4.9x), not 1x, and cash builds to about 13,401 and stays there [D30]. Borrowing that cash and holding it adds nothing to the operations; it shows the target is applied to rising EBITDA but not enforced on the way down. Bull peaks at 12,014 with a maximum of 1.7x; bear holds debt at 49.699 [D30].

**Prompt inputs (user, carried from v3 unchanged)** [P]: debt held, then 1x EBITDA from FY2027E in base and bull, held in bear ("rerun and keep debt constant until the year when EBITDA is positive. Then target 1x EBITDA from that year onward.", 2026-10-29) [P103]; cost of debt 10% ("take rd as 10%", 2026-10-29) [P101]; year-0 D&A 3% of revenue = $0.48M ("set the year 0 depreciation and amortization to 3% of revenue and rerun", 2026-10-29) [P102].

**Defaults filled (Finagle's words):** baseline.noa, baseline.nol, distribution.mode, forecast.dwc.mode, rates.gt, rates.re, rates.roict, rates.t, year [D30].

**Policies the user has not decided** (from the request [D31]), with the risk each creates:

- **stock-based compensation policy.** Finagle's default holds the year-0 SBC/EBITDA ratio (about -11.6%, SBC 17.7 / EBITDA -152.9 in FY2025). Once EBITDA turns positive (FY2027E) that ratio gives negative SBC, i.e. a non-cash cost becomes a cash add-back and inflates value. If defaults_filled shows stock comp at that ratio, report the result as not a valuation.
- **capex / reinvestment (ROIC) policy.** Defaults tie capex to growth or year-0 ratios of a pre-revenue company; with revenue jumping ~40x then falling, implied reinvestment can be near zero or negative, overstating free cash flow.
- **HemB SPV royalty-financing liability $473.2M (10-K, FY2025).** Booked as debt (ASC 470) and repaid from Hemgenix royalties until 1.85x upfront ($693.8M) by 2032-06-30, else up to 2.25x through 2038. The forecast keeps the royalties in revenue/EBITDA. If Finagle's debt excludes it, royalty cash is counted while the claim on it is ignored (overstates value by up to ~$0.5-0.7B). Not decided by David whether to count it as debt or strip royalty cash.
- **tax rate and NOL use.** uniQure has large accumulated losses (Dutch/US). A default statutory tax from FY2027E ignores NOLs (understates value); unlimited NOLs overstate it. Not decided.

- **funding of negative cash (bear especially).** Bear EBITDA is negative every year with debt held; if cash runs below zero Finagle may treat it as free negative cash at no cost or dilution, misstating bear value. No equity raise or dilution policy stated (post_finagle is null).

**Market inputs and commit.** Price $25.30 (2026-10-30), risk-free 4.99% (2026-10-30), shares 62.53M (dei:EntityCommonStockSharesOutstanding; Share count is as of 2026-02-26, the 10-K cover date, not the fiscal period end.). Finagle commit `377f177b4013e713fe7c4603962e5f883a67e298`, run 2026-10-30T12:00:57.618687-04:00 [D30].

**Method.** Finagle discounts free cash flow to equity at the cost of equity. It takes the forecast's revenue and EBITDA growth for FY2026E–FY2033E as given, extends them two more years (FY2034E–FY2035E) with the starting margin, incremental margin and next-period growth, and fades to terminal growth. The terminal growth is Finagle's default. Negative cash is left unfunded: no equity raise, dilution or borrowing cost is modelled for it.

**Figure 7 – Valuation inputs**

| Input | Base | Bull | Bear | Source |
|---|---|---|---|---|
| Cost of equity | 10.49% | 10.49% | 10.49% | Finagle default [D30] |

| Cash | 80.2 | -99.2 | -254 | -378 | -483 | -581 | -674 | -762 | -846 | -928 | -1,006 |

*Source: Finagle v4 result [D30].*

**Figure 12 – Scenarios vs. price.** The spread is driven by the backlog-clearing peak (FY2028E–FY2029E) and by a terminal value built on Finagle's ~5% default growth, not on the forecast.

| Scenario | Value per share (US$) | Price (US$) | not_a_valuation |
|---|---|---|---|
| bull | $663.39 | $25.30 | True |
| base | $226.87 | $25.30 | True |
| bear | -$18.51 | $25.30 | True |

*Source: Finagle v4 result [D30].*

**Caveats.** The values ignore: the $473.2M HemB SPV royalty liability (Finagle debt is the 10-K $49.7M); funding for negative cash in FY2026E (all) and FY2026E–FY2035E (bear); dilution; NOLs; a stock-comp policy (the default turns negative and adds value); a capex policy (bear capex is negative); the probability of approval (base and bull assume approval); and terminal growth that is Finagle's default, not the forecast's. No rating or price target.

# Appendix A – Bull and Bear Cases

**Bull.** Bull starts at 30 centers doing 1.5 procedures a week, rising to 2.0. It adds 5 centers a quarter, up to 100 [S7]. Refill is 2,872 a year [C3]. The UK launches from Q3 2028 at $1.5M [S9][G11]. Cumulative US treatments pass 6,000 by Q1 2029, and the backlog clears in Q4 2029.

- **E6** Goldman Sachs modeling potential peak global sales of $2.5 billion with a 90% probability of success, assuming approximately 25% cumulative penetration into the estimated 20,000 diagnosed, symptomatic patients in the US.
- **G1** I think we already have 15 centers just in the first couple months that have filled out and sort of qualified by saying, yes, not only do we have the materials, the patient recruitment, the cooperation with pharmacy to thaw out the drugs, all those types of things, but they've also pretty much raised their hand and say, yes, we could be ready to do 1, if not 2 of these procedures a week. So, if we can get to 20 or 30 of these centers that are each willing to commit 1 to 2 cases a week, which is 50 to 100 cases a week, you can imagine getting to a ramped-up procedure type pretty quickly here.
- **G2** Our highest priority with the neurosurgical community is to work hand-in-hand with our biopharma partners and to identify the first 35-40 specialized treatment centers which can add 5,000 patients a year in capacity.
- **G3** the expectation would be a final formal decision sometime six to eight months after the acceptance of that BLA. Again, if everything went perfectly. That would put a potential approval for the very first neuro gene therapy to treat Huntington's disease sometime middle to second half of next year.
- **G4** Management and the FDA reached alignment on a randomized standard-of-care controlled design, substituting the previous sham procedure, with total functional capacity at 36 months as the primary endpoint … the confirmatory study should be well underway and potentially fully enrolled at the time of accelerated approval.
- **G5** ~6,000 patients *Initial Treatable Patients at Launch … ~20,000 patients Diagnosed HD ~40,000 patients Symptomatic HD ~100,000 patients Genetically Identifiable HD …* Management Estimate. (slide 25)
- **G6** About 6,000 patients, representing the initially treatable ~30% of the total ~20,000 total diagnosed and symptomatic HD patients in the United States today. Approximately 40,000 U.S. patients are symptomatic for HD.

- **G9** There are a number of centers that are available to do this, and we are working with what we think is the right number in the initial term, and then we will continue to build from there. From a capacity point of view, it's very challenging to give you one number, and we're still working through that because it depends on the number of neurosurgeons at a particular hospital. It depends on the number of intraoperative OR suites and other competing priorities.
- **G11** There are between 7,000-8,000 patients living with HD in the U.K., with approximately 30,000 at risk.
- **G12** its Marketing Authorisation Application (MAA) for ifezuntirgene inilparvovec has been submitted to the United Kingdom's (U.K.) Medicines and Healthcare products Regulatory Agency (MHRA) ... The Company has requested priority review for the BLA. If granted, priority review would shorten the FDA review cycle to six months following the FDA's 60-day BLA filing review period.
- **G13** we rely on Genezen for the production of HEMGENIX and will have preferential access to the Lexington Facility for the production of materials related to AMT-130 and AMT-191 programs under separately negotiated development and supply arrangements.
- **G14** divestment of our commercial manufacturing activities in July 2024
- **P3** Yearly refill is the incidence rate and exclude a few due to eligibility, willingness and coverage.
- **P5** Your centers count at the end of 27 is wrong. There are currently around 30 centers that can do 1-2 procedures a week. This is available info from ClearPoint
- **P101** David May 2026-10-29: "take rd as 10%"
- **P102** David May 2026-10-29: "set the year 0 depreciation and amortization to 3% of revenue and rerun"
- **P103** David May 2026-10-29: "rerun and keep debt constant until the year when EBITDA is positive. Then target 1x EBITDA from that year onward."
- **S1** Confirmatory-study R&D $70M/yr FY27E-FY31E on top of the Q2 2026 R&D run rate (midpoint of $60-80M; cost undisclosed) [S]
- **S5** 10%/yr of the untreated eligible backlog is lost (progression past early-manifest stage, death) [S]
- **S6** base capacity: 30 centers at Q3 2027 launch (David, ClearPoint); 1.00 procedure/center/week at launch rising 0.125/qtr to 2.0; first-quarter utilisation [0.5, 0.67, 0.83, 1.0] (site activation, surgeon proctoring, referral and prior-authorisation pipeline: the binding short-term limit); +3 centers/qtr while a backlog exists, to 70; Genezen vector supply assumed not binding through FY29E (no disclosed dose capacity); after the backlog clears the network falls to max(30, refill need) [S]
- **S7** bull capacity: 30 centers at Q3 2027 launch (David, ClearPoint); 1.50 procedure/center/week at launch rising 0.125/qtr to 2.0; first-quarter utilisation [0.67, 0.83, 1.0] (site activation, surgeon proctoring, referral and prior-authorisation pipeline: the binding short-term limit); +5 centers/qtr while a backlog exists, to 100; Genezen vector supply assumed not binding through FY29E (no disclosed dose capacity); after the backlog clears the network falls to max(30, refill need) [S]
- **S9** Bull UK: MHRA approval and NHS access from Q3 2028; initial backlog 30% x 7,500 = 2250; refill 0.48/100k x 69M x bull haircut; centers [3, 6, 9, 12, 15]; 1 procedure/center/week (4.33/month); net price $1.5M [S]
- **S10** Base US net price $2.0M FY27E-FY30E, then -10%% to $1.8M from the year after annual US sales first pass $2B (payer budget pressure); Kebilidi $3.95M, Elevidys $3.2M, Hemgenix $3.5M list are gross [S]
- **S11** Bull US net price $2.4M, then -10%% to $2.16M from the year after annual US sales first pass $2B [S]
- **S12** base AMT-130 COGS (Genezen manufacturing, release, cold-chain; no licensor royalty, none disclosed for AMT-130): $0.30M/patient in FY27, falling $0.020M/yr to $0.20M; UNVERIFIED, no uniQure disclosure [S]
- **S14** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]
- **S15** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]
- **S16** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]
- **S17** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]
- **S18** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]
- **S19** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]

- **S20** Hemgenix royalty build (US$M, GAAP license revenue): growth slows as Hemgenix matures; FY32+ +2.5/yr fading 5%/yr. Cash goes to HemB SPV until the royalty-financing cap is met (liability $473.2M = debt) [S]
- **S21** Collaboration services to CSL wound down after the 2024 Lexington Transaction; none in H1 2026 [S]
- **S22** No AMT-130 US revenue: no approval before 2027.
- **S23** No AMT-130 UK revenue in base
- **S24** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 155.5 - cash opex 408.2 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S25** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 826.6 - cash opex 715.5 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S26** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 1160.0 - cash opex 890.4 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S27** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 269.7 - cash opex 522.4 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S28** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 247.2 - cash opex 517.6 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S29** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 224.7 - cash opex 454.3 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S30** base EBITDA (US$M) = license GP + AMT-130 revenue - COGS 224.7 - cash opex 461.1 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $80M, $1.5M per active center, 5% variable) [S]
- **S31** Average of me and FY38 gross margin (Finagle default rule); no positive-EBITDA history to set it against [S]
- **S32** FY39 growth: royalty 53.8 (+3%) + AMT-130 at the FY38 steady-state flow and price, vs FY38 revenue [S]
- **S35** No AMT-130 UK revenue in bull (UK launch from Q3 2028 in bull only)
- **S36** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 301.7 - cash opex 485.0 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S37** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 1334.8 - cash opex 980.6 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S38** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 1788.0 - cash opex 1246.8 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S39** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 821.7 - cash opex 803.8 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S40** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 730.4 - cash opex 810.2 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S41** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 611.4 - cash opex 727.7 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S42** bull EBITDA (US$M) = license GP + AMT-130 revenue - COGS 565.4 - cash opex 715.4 (core Q2 2026 run rate x4 +3%/yr, US commercial fixed $90M, $1.5M per active center, 5% variable, UK $15M from FY28) [S]
- **S43** Average of me and FY38 gross margin (Finagle default rule); no positive-EBITDA history to set it against [S]
- **S44** FY39 growth: royalty 53.8 (+3%) + AMT-130 at the FY38 steady-state flow and price, vs FY38 revenue [S]
- **S45** No AMT-130 US revenue: bear case, AMT-130 not approved.
- **S46** No AMT-130 UK revenue in bear
- **S48** bear: license gross profit - fixed cash opex 170 after a restructuring (US$M) [S]
- **S49** bear: license gross profit - fixed cash opex 150 after a restructuring (US$M) [S]
- **S50** bear: license gross profit - fixed cash opex 140 after a restructuring (US$M) [S]

- **S51** bear: license gross profit - fixed cash opex 140 after a restructuring (US$M) [S]
- **S52** bear: license gross profit - fixed cash opex 140 after a restructuring (US$M) [S]
- **S53** bear: license gross profit - fixed cash opex 140 after a restructuring (US$M) [S]
- **S54** bear: license gross profit - fixed cash opex 140 after a restructuring (US$M) [S]
- **S55** Bear: opex fixed after restructuring; an incremental royalty dollar drops through at the license gross margin [S]
- **S56** FY39 growth: Hemgenix royalty only, +3% [S]
- **S401** Revenue recognised at treatment (point in time), usual practice for one-time gene therapies; not a uniQure policy disclosure [S]
- **S402** Q3 2026 results date 2026-11-04 (not reopened this revision) [S]

## Appendix C – Method

We follow the forecaster method. Reported periods stay as reported. FY2026E is consensus, because there is no guidance. Later years are a quarterly line build: capacity, backlog and refill set patients, and patients × net price set AMT-130 revenue. FY2027E is not scaled to consensus, because the user's capacity instruction overrides it. The user's instructions are tagged P with their dates and override the default method. A CEO-simulation bot's review was used only as a pointer, and every figure is tagged to a document we opened. Tags: A actual or reported, G company statement, E external estimate, C calculation, S assumption, P user instruction, D document.
