Pro-Dex, Inc. (Nasdaq: PDEX)

Company Update: FY27E–FY28E Revenue and EBITDA Forecast

Rewritten 8 November 2026, America/Toronto. Forecast and research as of 7 November 2026; valuation run 9 November 2026. Latest reported quarter ended 30 September 2026. US$ millions unless stated otherwise; fiscal year ends 30 June. Includes a Finagle valuation (Section 9). No rating and no price target. Forecast figures and assumptions are unchanged from v4 in `forecast.json`*. Valuation result:* `forecasts/PDEX/collab/valuation_result_v03.json`*. Numbered sources appear in Appendix B.*

1. Estimate comparison

Figure 1 shows why we use consensus for revenue and a cost build for EBITDA. Our unscaled revenue build is close to consensus in FY27 and about two percent below it in FY28 [C79, C83]. The EBITDA bottom-up view uses the consensus-anchored revenue mix; the separate unscaled-revenue EBITDA sensitivity is not that selected view [C23, C24, C25, C26].

Figure 1 – Estimate comparison

View	FY27E revenue	FY28E revenue	FY27E EBITDA	FY28E EBITDA
Bottom-up	82.6 [C9]	89.3 [C10]	15.5 [C23]	16.5 [C24]
Top-down low / high	n/a — no guide	n/a — no guide	n/a — no guide	n/a — no guide

Source: forecast.json `views` *[E1][E2][C9][C10][C23][C24][C79][C80][C81][C82][C83][C84][C85][C86]. May not sum due to rounding.*

The consensus covers one analyst and was reopened on 7 November 2026 [E1, E2]. The provider capture is 30 October 2026 at 12:17 EDT, America/Toronto; the analyst's estimate publication date is not stated [D13]. Annual numerical management guidance and a usable current EBITDA consensus are unavailable [D13, D16]. No new estimate or financial disclosure was incorporated for this report-only rewrite.

2. Summary

FORECAST UPDATE

■ **We forecast revenue of $82.7M in FY27 and $86.8M in FY28, with consensus setting the base while robotics broadens the sales mix [E1, E2, S28].** Figure 1 records consensus as the revenue base and the cost build as the EBITDA base [E1, E2, C23, C24]. The own-line revenue build is $82.6M/$89.3M [C9, C10]. Monogram Technologies, Zimmer Biomet's acquired robotic-surgery business, contributes within—not on top of—the base total [D23, S28]. Its prices and fee percentage remain redacted in the supply contract [D18, D25].

■ **We forecast EBITDA of $15.5M/$16.5M as hardware-led robotics growth absorbs launch support and new manufacturing occupancy [C23, C24, G21, S26].** Core gross margin remains tied to trailing experience [C4]. The

model treats hardware, billable engineering and sourced-product fees separately [S24, S25, S26]. Additional program support remains a cost rather than disappearing into a royalty-margin assumption [S26]. Historical financials remain reported, not retrospectively normalized [C1, C2, A40].

■ **We allocate $0.307M/$6.2M of Monogram revenue to the base because the June 2026 comment puts Monogram at the second-customer rank by FY28 [G17, A43, S23].** The band is about $6.20M from the FY26 8% customer and about $9.95M if the latest quarter is annualized [C267, C268]. FY27 stays the validation year [G10]. FY28 ships 244 expected systems, 70% of 348 conditional systems, which is what the $6.2M requires at the existing kit price [S23]. Purchase fees follow eligible sourced purchases rather than a fixed dollar royalty per completed operation [G15, S25].

The bull reaches FY28 revenue of $92.1M and EBITDA of $19.8M; its Monogram total meets the $9.95M annualized comparator, and the line build is in Appendix A [C52, C54, S23]. The bear reaches $70.7M and $10.2M; its delayed robotics launch and core-customer stress are also in Appendix A [C71, C73].

Figure 2 shows the base case against reported history.

Figure 2 – Financial summary

US$M	FY25A	FY26A	FY27E	FY28E
Revenue	66.6 [A16]	77.5 [A17]	82.7 [E1]	86.8 [E2]
Revenue growth	23.7% (derived) [D12]	16.5% [C34]	6.6% [C38]	5.0% [C38]
Gross margin	29.3% [C27]	31.4% [C28]	32.3% [C272]	32.5% [C275]
EBITDA	12.5 [C1]	15.1 [C2]	15.5 [C23]	16.5 [C24]
EBITDA growth	39.7% (derived) [D12]	20.7% [C35]	2.8% [C39]	6.6% [C39]
EBITDA margin	18.7% (derived) [C1][A16]	19.4% (derived) [C2][A17]	18.7% [C36]	19.0% [C37]

Source: forecast.json; D1, D3, D12, D13. FY25 growth uses FY24 reported history. May not sum due to rounding.

3. Business Description and Reporting Lines

Pro-Dex designs and manufactures autoclavable, battery-powered surgical drivers and shavers for orthopaedic, thoracic and craniomaxillofacial (CMF) device companies, mostly as a contract or co-development manufacturer, and since February 2026 also machines parts for aerospace and defence through Advanced Precision Machining (APM) [D1]. It reports one segment; we use its revenue-by-type disclosure as the lines [D1]. Non-recurring engineering (NRE) means billable customer-development work [D1]. Figure 3 shows that medical devices are now four-fifths of sales and repairs have fallen to a sixth.

Figure 3 – Revenue by line, FY26

Line	FY26A	Share	FY26 growth
Medical devices (orthopaedic 48.8, CMF 11.2, thoracic 2.1)	62.1 [A6]	80%	30.1% [C29]
Industrial and scientific (incl. APM from Feb 2026)	1.5 [A7]	2%	75.7% [C30]
NRE and prototype services	1.7 [A8]	2%	136.4% [C31]
Repairs	12.5 [A9]	16%	−32.5% [C32]
Discounts and other (rebates)	−0.3 [A10]	0%	n/m [C33]
Total	77.5 [A17]	100%	16.5% [C34]

Source: D1 p.19. May not sum due to rounding.

Medical devices. Sold direct to OEMs under exclusive development and supply agreements. The largest customer's next-generation orthopaedic handpiece drove FY26 growth; the customer extended the contract through calendar 2028 with higher volumes and no volume rebates [G3, G6]. CMF drivers sell through distributors and rose 39% in Q1 FY27 [G7].

Repairs. Mostly repairs of the largest customer's legacy handpiece, falling as it moves to the new model. Billable next-generation repairs start in FY27, but management does not know the volumes [G8]. The latest quarter's repair margins are significantly lower because of expensive replacement components and labour under-utilisation; historical high margins are not a stable current annuity [G19].

NRE and prototype services. Billable engineering for customers, lumpy by quarter [G7].

Industrial and scientific. Air motors (de minimis) and APM's third-party machining [D3].

Product pipeline. Helios is already released for production, with interest but no guaranteed orders; commercial volumes remain uncertain; v4 now allocates a modest central sales path within the medical-device line [G9]. The June presentation also names an articulating attachment, spinal driver and shaver system, without annual revenue commitments [D20, D21]. Pipeline allocations are explicit inside the consensus total, not incremental to it [S28].

Monogram / Zimmer Biomet: hardware, sourced-product fees and cash milestones

Zimmer completed its acquisition of Monogram on 7 October 2025; PDEX remains an independent supplier, not a Zimmer subsidiary [A37, D23, D18]. The operative 3 October 2023 supply contract, unlike the ineffective 2018 agreement, separates exclusive PDEX-manufactured end effectors and gearing from sourced burrs, saw blades and custom patient-specific implants [G16, G15]. Hardware uses cost-based pricing with a redacted target gross margin and annual adjustment; development services are time-and-materials [G16, D18]. The sourced-product fee is a redacted percentage of Monogram's eligible purchases, payable on purchase/payment timing, not a disclosed fixed amount per completed operation; the robotic arm and navigation cameras are excluded from that basket [G15]. PDEX has no manufacturing responsibility for these sourced items, supporting a potentially capital-light fee stream, but neither a near-100% gross margin nor an EBITDA margin is disclosed [D18, S22].

The latest PDEX 10-Q expects validation units in the second half of FY27 (January–June 2027), not the October–December 2026 start in Guillaume Meignin's article of 29 June 2026 [G10, D17]. In June 2026 the CEO said Monogram "could definitely be customer number two" within a couple of years, but declined to quantify revenue [G17]. On 4 November, Zimmer's CEO anticipated a surgeon-guided fully autonomous launch in calendar H1 2027, pending regulatory clearance; that statement is not a PDEX purchase order, and a 510(k) filing is not clearance [G18]. We do not map installations of ROSA, Zimmer's existing robotic-surgery platform, or all Zimmer robotic procedures into PDEX-eligible fee volumes [D23, G15].

Investment proceeds and contingent value rights (CVRs) are separate from product sales. PDEX received $8.9M for its Monogram equity and a $2.3M first milestone; the gains sit below operating income and are excluded from EBITDA [A37, A38]. Remaining contingent value rights (CVRs), which pay on specified milestones, are uncertain and cannot be added as recurring operating sales or counted again as cash already received [D1, D2].

The base case includes $0.307M/$6.2M of Monogram revenue [S23, S24, S25, S26]. That revenue sits within the base total, not on top of it [D23, S28]. Validation and commercial kits are recorded in medical devices [S24, S28]. Billable engineering stays in non-recurring engineering and prototype services [S26, S28]. The sourced-product fee is provisionally assigned to discounts and other operating revenue, because its final reported presentation is unavailable [S26, S28].

The supply term begins after ten end effectors have been developed and validated and runs for fifteen years; this is a contractual trigger, not a guaranteed ten-unit annual order [D18, D25]. Monogram pays the sourced-product fee as a percentage of gross eligible unit purchase cost multiplied by purchased units [G15]. Fee percentage, eligible purchase mix and timing are not disclosed, so the historical fee share is unavailable and the modeled base contribution remains an assumption [S25]. Ordinary Persona implants are not automatically custom patient-specific implants [D25].

4. Management

Richard (Rick) Van Kirk is President and CEO; in June he described roughly eleven years as CEO and twenty years at PDEX, after an operations role [D21]. The capital-allocation record is long-dated: the Monogram stake returned $8.9M plus a $2.3M milestone [A37, A38]; buybacks were $3.4M in FY26 [A39]; APM was bought for vertical integration in February 2026 [D1]. The June public presentation confirms an actively staffed M&A effort [G11]. Beneficial

ownership was not refreshed for this revision; no ownership-based forecast assumption is used. The record on diversification away from the largest customer is thin: that customer rose to 78% of sales [A36]. That share equals about $60.5M of FY26 revenue (derived) [C90]. Guillaume Meignin's article of 29 June 2026 calls that customer "very likely Stryker" [D17]. That attribution is conjecture [D17]. PDEX's own instructions-for-use (IFU) index independently lists the Zimmer Biomet Atlas Pro Driver and accessories [D26, A36]. The listing corroborates a Zimmer Biomet product relationship [D26, A36]. It does not identify the customer that accounts for 78% of sales [D26, A36]. Zimmer Biomet acquired Monogram [A37, D23, D18]. A National Institutes of Health device record dates that product tie to before that acquisition [D19]. Neither the supplier relationship nor the discussion of Monogram, taken separately, proves or disproves whether Zimmer Biomet is the large customer [D17, D26, A36].

Shareholder letters (qualitative evidence only). The inherited source review covers CEO letters at the front of the FY2022–FY2026 proxies. The FY2026 letter (filed 6 October 2026) confirms the three-year extension with the largest customer, counts "four projects in development" including Monogram/Zimmer Biomet with shipments expected this fiscal year, describes the Helios CMF driver as "ready for production" with "a number of potential customers", and says management is evaluating acquisitions [D14]. Earlier letters are short histories; the "strong year ahead" tone was followed by growth in each of the last four years, but every year in that sample was a growth year, and none flagged the later repair decline or customer concentration. The FY2025 letter cites $65M of sales against $66.6M filed; its own 24% growth matches the filed figure, so we treat $65M as loose rounding [D15, A16]. No forecast number rests on the letters.

5. Key Developments

Figure 4 shows the tight sequence between validation, regulatory clearance and commercial launch. The new manufacturing lease also adds costs beyond the latest-quarter run rate [G10, G18, G21].

Figure 4 – Dated developments

Date	Evidence and relevance
3 October 2023	Executed exclusive supply contract: manufactured end effectors/gearing, engineering and separate eligible purchase fees [D18][D25]
7 October 2025	Zimmer acquires Monogram; PDEX remains an independent supplier [D23]
17 June 2026	PDEX CEO: Monogram "could definitely be customer number two" within a couple of years, but declines revenue expectations [G17][D21]
29 October 2026	PDEX: validation units in second half FY27 = January–June 2027; meaningful incremental sales have not yet occurred [G10][D2]
30 October 2026	New APM manufacturing space starts November 1; monthly rent $11,600 initially, then $12,064 from March 2028 [G21]
4 November 2026	Zimmer targets fully autonomous launch in H1 calendar 2027, conditional on clearance; no annual Monogram unit guidance [G18][D22]

Source: D18, D21, D22, D23, D28. May not sum due to rounding.

6. Business Drivers by Line

Medical devices and repairs

There is no new event in core medical devices [S2]. The forecast continues from the latest-quarter sales run rate [S2]. The FY28 assumption is three-percent growth in total medical-device revenue, with the dollar increase attributed to
craniomaxillofacial distributor growth rather than a claim of three-percent growth in that smaller business alone [S3]. Orthopaedic revenue is anchored by management's expectation of similar levels through 2028 [G3].

Repairs decline as legacy handpieces leave the installed fleet [G8]. We retain an unscaled repair build of about $8.53M in FY27 and $7.00M in FY28 [S8, S9]. Expensive replacement parts and labor under-utilization mean the historical repair margin is not a dependable annuity [G19]. Next-generation repair volumes remain unquantified [G8].

Helios is a released craniomaxillofacial driver, not a future regulatory launch assumed to be ready without evidence [G9]. We allocate $0.150M/$0.450M within the existing medical-device run rate and growth budget [S27].

The illustrative unit count and transfer price are judgments, not disclosed orders [S27]. No second setup-engineering uplift or article-based premium margin is added [S27].

Monogram hardware, engineering and purchase fees

Commercial kits and purchase fees wait on regulatory clearance of Zimmer Biomet's surgeon-guided fully autonomous system, which has not occurred [G18]. Validation shipments are the earlier PDEX step, the dollars below are the weighted shipment plan, and the Monogram subsection and Figure 4 give the dates [G10, S23, G18].

The manufactured products are autoclavable bone-milling end effectors and gearing that converts rotation into sagittal motion [G16, D25]. Routine functional testing belongs in unit manufacturing cost, not a separate engineering invoice [D25]. We record these validation and commercial kits in medical devices [S24, S28]. Billable engineering stays in non-recurring engineering (NRE) and prototype services, while the sourced-product fee is provisionally assigned to discounts/other operating revenue because its final reported presentation is unavailable [S26, S28].

We assume commercial delivery starts in April–June 2027, after validation during January–June [S23]. FY27 keeps ten conditional systems at 40% realization, four expected systems [S23]. FY28 conditional systems are 348 at 70% realization, 244 expected systems, because that is the count that brings Monogram revenue to the $6.20M second-customer band at the existing kit price [S23, G17, A43]. The old plan of 120 systems was not a cap the company stated [S23]. These weights are timing and adoption judgment, not clinical-trial success probabilities [S23]. Expected values can contain fractional kit or procedure equivalents; they are not literal fractional purchase orders [S23, S24, S25].

We assume four end-effector/gearing kits per new system for working, backup and sterilization rotation [S24]. A $6,000 kit price is supported only by a cost sketch of $2,500 materials, ten direct hours at $70 and roughly $850 indirect/testing cost [S24]. The modeled hardware gross margin approximates the trailing company margin; neither the bill of materials nor the price is a supplier quotation [S24, C4]. Spares equal five percent of beginning installed kits, with no current-year kit replacement assumption [S24]. The one-year warranty and multi-year handpiece life do not support an immediate billable repair annuity [D18, D21].

Figure 4a shows how expected kit deliveries lead the procedure exposure used to estimate eligible purchases.

Figure 4a – Base-case operating bridge

Metric	FY27E	FY28E
Conditional new commercial systems	10 [S62]	348 [S78]
Shipment realization	40.0% [S63]	70.0% [S79]
Expected new commercial systems	4 [C153]	243.6 [C182]
Beginning installed systems	0 [C154]	4 [C183]
Validation kits	10 [S64]	0 [S80]
Kits per new system	4 [S65]	4 [S81]
Spares / replacement kits	0.0 [C157]	0.8 [C186]
Total expected kits	26.0 [C158]	975.2 [C187]
Kit price, US$	6000 [S66]	6000 [S82]
Active system-years	0.5 [C161]	125.8 [C190]
Procedures per active system-year	120 [S68]	120 [S84]
Procedure equivalents	60 [C163]	15096 [C192]
Inventory purchases / contemporaneous use	130.0% [S69]	115.0% [S85]
Eligible purchase basket, US$	300 [S70]	300 [S86]
Purchase-fee percentage	5.0% [S71]	5.0% [S87]

Source: unchanged v4 robotics_model.csv and forecast.json [S23][S24][S25]. May not sum due to rounding.

Procedure exposure in FY27 uses half of the final quarter on average [S23]. FY28 uses beginning systems plus half the new deliveries [S23]. MAKO Surgical's RIO orthopaedic platform achieved 6.6 procedures per system per month

in Q4 2012, against which the central assumption of 120 procedures per active system-year is an operational plausibility check, not a like-for-like market-share forecast [G20, D27, S23]. Zimmer's distribution reach supports a faster rollout than the older independent company, but its robotic sales specialists serve the wider suite and are not a Monogram-only unit commitment [D22, S23]. ROSA, Zimmer's existing robotic-surgery platform, is not assumed to convert automatically into this installed base [D22, D23].

Only eligible sourced products enter the purchase basket: burrs, saw blades and genuinely custom patient-specific implants [G15, D25]. Robotic arms, navigation cameras, drapes, ordinary implants and sterile packaging are excluded from the modeled basket [D25, S25]. We assume $300 of eligible purchases per procedure-equivalent and a five-percent fee [S25]. Purchases are stocked ahead of use, so purchase timing can lead operating procedures [S25]. PDEX has no manufacturing responsibility for those products; the fee, not their gross purchase bill, is PDEX revenue [D18, S25].

Hardware revenue is expected kits multiplied by the assumed kit price: about $156,000 in FY27 and $5.85M in FY28 (derived) [C170, C199].

The FY27 fee bridge is 60 procedure-equivalents multiplied by a 130-percent stocking factor, $300 of eligible purchases and the assumed five-percent fee, producing about $1,170 (derived) [C171]. FY28 uses 15,096 procedure-equivalents, a 115-percent stocking factor and the same basket/rate, producing about $260,000 (derived) [C200]. This is an expected eligible-purchase calculation, not a contractual flat fee per surgery [S25].

Engineering revenue assumes about 1,000 billable hours at $150 per hour in FY27 and roughly two-thirds of that workload in FY28 [S26]. The resulting engineering sales stay inside the existing NRE budget, rather than being added twice [S26].

We allow a ninety-five-percent fee gross margin and an eighty-five-percent fee contribution before shared program support [S25]. Engineering gross margin is thirty-five percent in the base [S26]. Hardware and engineering contribution before shared launch support equals modeled gross profit; kit costs already include routine testing and indirect manufacturing costs [S24, S26]. Additional support is deducted separately, so billable engineering labor is not charged twice [S26].

Figure 4b separates the revenue streams from their contribution. Monetary rows use the report's US$M rounding; small early purchase fees are therefore better understood through the operating bridge than the rounded cell.

Figure 4b – Base-case stream economics

US$M unless margin	FY27E	FY28E
Hardware revenue	0.2 [C170]	5.9 [C199]
Engineering / NRE revenue	0.2 [S72]	0.1 [S88]
Eligible sourced purchases, not PDEX sales	0.0 [C167]	5.2 [C196]
PDEX purchase fees	0.0 [C171]	0.3 [C200]
Total Monogram revenue	0.3 [C174]	6.2 [C203]
Hardware gross margin	32.5% [S67]	32.5% [S83]
Engineering gross margin	35.0% [S73]	35.0% [S89]
Fee gross margin	95.0% [S74]	95.0% [S90]
Fee contribution before shared support	85.0% [S75]	85.0% [S91]
Monogram gross profit	0.1 [C175]	2.2 [C204]
Fee administration expense	0.0 [C176]	0.0 [C205]
Additional shared launch support	0.0 [S76]	0.1 [S92]
Monogram incremental EBITDA	0.1 [C178]	2.1 [C207]
Helios revenue already in core budget	0.2 [S77]	0.5 [S93]

Source: unchanged v4 robotics_model.csv and forecast.json [S24][S25][S26][S27]. May not sum due to rounding.

The June 2026 comment that Monogram could become customer number two within a couple of years sets the FY28 band [G17]. Said in June 2026, that horizon is the end of FY28. The FY26 second customer is about $6.20M, and the latest quarter annualizes to about $9.95M (derived) [C267, C268]. The base meets the $6.20M figure. The bull meets the $9.95M figure. The medium-term organic growth forecast is the other lines' trajectory plus one more year of that path [S14, S18]. Appendix A has the bull and bear builds. The comment does not identify the customer that accounts for 78% of sales [G17, A36].

Industrial machining, occupancy and working capital

There is no new event in third-party industrial sales [S4, S5]. Advanced Precision Machining's third-party industrial sales remain unscaled at the existing run rate [S4, S5]. The change in this subsection is the manufacturing lease that starts in November 2026 [G21]. Advanced Precision Machining's acquired standalone revenue cannot simply be added to PDEX because some activity was already intercompany supply [D21]. We do not assume automation savings or an unannounced acquisition [D17, G11].

The new APM manufacturing lease starts in November 2026, outside the latest-quarter run rate [G21]. We deduct contracted cash rent of about $92,800/$141,000 as an incremental expense proxy, not as temporary integration spend [G21]. Actual straight-line lease expense and cost allocation may differ [G21]. Existing renewed-space escalations remain in ordinary inflation [S1].

Outsourcing and existing capacity can support an initial rollout but do not establish zero future investment [D1, D2, D21]. Inventory and receivables timing remain important to cash conversion [D2]. Capex method and year-zero cash, debt and shares remain exactly as in the v4 forecast [S21].

7. Risks

Customer concentration is the largest company-specific exposure: one customer accounts for 78 percent of FY26 sales and its contract runs through calendar 2028 [A36, G3]. The Zimmer/Monogram supplier evidence does not identify that customer [D18, D26]. Appendix A combines core-customer volume stress with a delayed robotics launch rather than assuming robotics immediately offsets the exposure [S16, S23].

Supplier and repair risks remain operational rather than purely cyclical [G5, G19]. A finish-supplier delay can shift shipments, while labor under-utilization and replacement-part cost weaken repair margins [G5, G19]. These pressures are reflected in the downside build in Appendix A [S16, S19].

The regulatory and adoption sequence is tight because PDEX's validation window overlaps Zimmer's targeted launch [G10, G18]. Clearance, sterilization validation, surgeon training, hospital capital budgets and utilization can delay hardware purchases and fee revenue [D18, S23]. The bear in Appendix A assumes no commercial launch through FY28 [S23].

Kit counts, price, fee eligibility and the redacted percentage are not verified economics [D25, S24, S25]. We exclude a broad custom-implant fee opportunity unless its eligibility and purchase base are demonstrated [S25]. A warranty burden, incremental tooling or greater sustaining engineering could reduce contribution below the selected cost bands [D18, D2, S26].

8. Forecast

How the evidence becomes the numbers

Figure 1 records the separate base choices for revenue and EBITDA. The base revenue totals remain $82.7M/$86.8M, with Monogram and Helios allocated inside those totals [E1, E2, S28]. The unscaled build is $82.6M/$89.3M [C9, C10]. Only residual core lines reconcile to consensus, while acquired industrial revenue and explicit central pipeline amounts remain unscaled [S28].

The own-line build adds Monogram hardware and purchase fees to the pre-existing revenue build [C9, C10]. Monogram engineering was already inside the NRE budget, and Helios was already inside the core medical-device budget [S26, S27]. We have no published analyst model proving those products are excluded from consensus [D13]. A full second robotics uplift would therefore risk double counting [S28].

Figure 5 maps evidence to the unchanged base assumptions, rather than presenting scenario choices as new company guidance.

Figure 5 – Evidence → assumption → forecast impact

Evidence	Base assumption	Base impact
Single-analyst estimates; no annual numerical guide [E1][E2]	Revenue follows consensus [S28]	82.7 / 86.8 revenue [E1][E2]
June 2026: Monogram could be customer number two within a couple of years [G17]	FY28 base and bull meet the second-customer band [S23][A43][A44]	6.2 / 10.0 Monogram revenue [C203][C261]
Validation in H2 FY27; conditional H1 2027 Zimmer launch [G10][G18]	FY27 stays the validation year; FY28 system count is solved to the band [S23]	4 / 244 expected systems [S23]
Contract covers hardware plus purchase fees [G15][G16]	Kits, purchase basket and rate estimated separately [S24][S25]	0.3 / 6.2 Monogram revenue [S23][S24][S25][S26]
Released Helios; orders not guaranteed [G9]	Modest allocation inside existing core budget [S27]	0.2 / 0.5 Helios sales [S27]
New manufacturing space after Q1 [G21]	Contractual cash-rent expense proxy [G21]	0.1 / 0.1 incremental cost [G21]
Sustaining engineering / launch work [D2]	Extra support and fee administration [S26]	15.5 / 16.5 EBITDA [C23][C24]

Source: v4 forecast.json, unchanged [S23][S24][S25][S26][S27][S28]. May not sum due to rounding.

The nine-quarter history identifies FY26 acquisition-related costs of $0.434M and former-owner consulting of $0.500M as one-time [A40, A35, P1]. The roughly $0.200M Q3 legal/consulting disclosure is likely included in the annual acquisition cost, not an additional annual add-back [G14, A40]. Historical financial tables continue to show reported EBITDA [C1, C2].

The Q1 FY27 cost run rate has no separately quantified remaining acquisition charge [C5, D2]. Ongoing APM operations and permanent finance, mergers-and-acquisitions, human-resources and IT hires remain in the cost base [G4]. Temporary deal integration expenditure remains only while work is unfinished, but neither a distinct remaining amount nor an end date is disclosed; we do not invent an integration completion benefit [P1, D2].

For the base cost build, non-Monogram revenue earns the retained core gross margin [C4, C23, C24]. Monogram gross profit is added stream by stream [S24, S25, S26]. New manufacturing rent, ordinary operating expenses, fee administration and incremental launch support are deducted [G21, C5, C6, S25, S26]. Existing depreciation, amortization and stock compensation are then added back under the inherited EBITDA definition [C7, C8, C23, C24].

The pipeline has been considered but does not extend the explicit forecast beyond FY28 [S29]. The medium-term organic growth forecast is 1.9%. Each other line keeps its own trajectory, and the Monogram cohort is one more year of the FY28 systems [S14]. The bull is 4.0% on the same rule [S18]. The contribution margin stays 25% because the continuing lines are ordinary core business and the cohort is mostly hardware [S13]. The core-customer renewal is the bear, at −10% [S20, G3]. It does not replace the base path. Terminal growth is Finagle's default, and Finagle fades the medium-term rate toward that default. Section 9 reports the valuation.

Base case

Figure 6 presents the unchanged base allocation across PDEX's disclosed revenue types.

Figure 6 – Base case by line

US$M	FY25A	FY26A	Q1FY27A	FY27E	FY28E
Medical devices	47.7 [A1]	62.1 [A6]	17.4 [A11]	69.8 [C12]	75.3 [C18]
Industrial and scientific	0.9 [A2]	1.5 [A7]	0.7 [A12]	3.0 [C13]	3.1 [C19]
NRE and prototype services	0.7 [A3]	1.6 [A8]	0.2 [A13]	1.2 [C14]	1.2 [C20]
Repairs	18.6 [A4]	12.5 [A9]	2.1 [A14]	8.5 [C15]	6.8 [C21]
Discounts and other	-1.3 [A5]	-0.3 [A10]	0.1 [A15]	0.2 [C16]	0.5 [C22]
Revenue	66.6 [A16]	77.5 [A17]	20.6 [A18]	82.7 [E1]	86.8 [E2]
EBITDA	12.5 [C1]	15.1 [C2]	4.1 [C3]	15.5 [C23]	16.5 [C24]
Revenue growth	23.7% (derived) [D12]	16.5% [C34]	11.0% (derived) [A18]	6.6% [C38]	5.0% [C38]
EBITDA margin	18.7% (derived) [C1]	19.4% (derived) [C2]	19.7% (derived) [C3]	18.7% [C36]	19.0% [C37]

Source: forecast.json; D1 p 19, D2 p 21. May not sum due to rounding.

SBC convention. Headline EBITDA adds back stock compensation. Keeping SBC as an expense would instead give base FY27/FY28 EBITDA of 15.0 [C280] / 15.9 [C281]; the addback is 0.5 [C278] / 0.6 [C279] US$M. This changes presentation, not the operating forecast.

9. Valuation

Finagle values the shares at $39.92 in the base case, against a $61.20 price on 9 November 2026, 34.8% below that price (derived) [D32, C314]. The present value of the terminal cash flow is 54.7% of that equity value (derived) [C314]. The bear case is $6.24 and the bull case is $52.81 [D32]. Appendix A has the three-case inputs, the bull growth bridge, and the bull and bear key rows.

The dividend-discount value equals the free-cash-flow value in each case, $39.92, $6.24 and $52.81 [D32]. No prompt input was stated, and there is no post-run adjustment [D32].

Finagle discounts free cash flow to equity at the cost of equity. It takes the explicit revenue and EBITDA as given for two years, FY2027E and FY2028E, then extends that path for eight further years, through FY2036E, using the starting margin, the incremental margin and the medium-term organic growth forecast, fading toward terminal growth [D32]. The terminal value uses the free cash flow of the year after FY2036E [D32]. Terminal growth is Finagle's default, equal to the 10-year yield. We did not set it. Free cash flow to equity stays positive in every year of the base and the bull [D32]. The bear has no sanity flag [D32].

Figure 13 is the base-case inputs behind the $39.92. The market rates are the same in the bear and the bull. Those two cases are in Figure 16.

Figure 13 – Valuation inputs, base case

Input	Base	Where it came from
Cost of equity	10.4%	Finagle default: 5.5 points over the 10-year yield [D32]
Cost of debt	4.3%	Finagle assumption: year-0 interest divided by year-0 debt [D32]
Tax rate	21%	Finagle assumption: US federal statutory rate [D32]
Terminal growth	4.9%	Finagle default: the 10-year yield [D32]
Shares (millions)	3.20	Yahoo, fetched [D32]
Price (US$)	61.20	Yahoo previous close [D32]
Year-0 debt	18.9	Yahoo [D32]
Year-0 cash	9.3	Yahoo [D32]
Starting margin	19.0%	Forecast file [C40]
Incremental margin	25.0%	Forecast judgment [S13]
Medium-term organic growth	1.9%	Line trajectories plus one more Monogram cohort [S14][C299]
Terminal WACC	9.4%	Finagle output [D32]

Source: `valuation_result_v03.json` [D32]; forecast leaves [C40][S13][S14][C299]. Full precision is in Appendix B.

The starting margin, 19.0%, is FY2028E EBITDA divided by FY2028E revenue [C40]. The contribution margin stays at 25%. The continuing lines are ordinary core business, and the Monogram cohort is still mostly hardware, so the mix does not move it [S13, S29]. The medium-term organic growth forecast is 1.9% [S14, C299]. Figure 21 is that build. Medical devices excluding Monogram hardware keep the 3% already used for FY28. The orthopedic phrase stops at 2028, so it does not freeze that line and it does not add a new rate [S3, G3]. Industrial keeps 5% [S5]. NRE excluding Monogram engineering stays flat [S7]. Repairs keep the decline already taken from FY27 to FY28 [S8, S9]. Discounts excluding the fee stay on their last explicit step [S10]. The Monogram row is one more year of the FY28 systems [S23]. The bull uses the same rule and is 4.0%. Appendix A has that bridge [S18]. The bear stays the customer renewal, at −10%, and it does not set the base. Appendix A has that case [S20, G3]. Cost of equity, terminal growth and the 15% terminal return on capital are Finagle defaults [D32]. Because no debt policy was stated, Finagle sets debt to year-0 debt over year-0 EBITDA, about 1.3x, from FY2027E [D32]. The cost of debt is year-0 interest divided by year-0 debt [D32]. The tax rate is the 21% federal statutory rate, because no marginal rate was stated [D32].

Figure 21 takes the last explicit year, grows each line on its own trajectory, and adds one more Monogram cohort. The dollar changes divided by FY28 revenue are the 1.9% [C299].

Figure 21 – Medium-term organic growth, base case

US$M	FY2028E	FY2029E	Change
Medical devices ex hardware	69.4 [C286]	71.5 [C287]	2.1
Industrial and scientific	3.1 [C288]	3.3 [C289]	0.2
NRE ex engineering	1.1 [C290]	1.1 [C291]	0.0
Repairs	6.8 [C292]	5.4 [C293]	−1.4
Discounts ex fee	0.2 [C294]	0.2 [C295]	0.0
Monogram cohort	6.2 [C296]	7.0 [C297]	0.8
Total	86.8 [E2]	88.4 [C298]	1.6
Medium-term organic growth			1.9% [C299]

Source: forecast.json `gsnext_bridge` [C286][C287][C288][C289][C290][C291][C292][C293][C294][C295][C296][C297][C298][C299][S3][S5][S7][S8][S9][S10][S23][E2]. May not sum due to rounding.

No prompt input was stated [D32]. Finagle filled, as its own assumptions, the tax-loss balance, non-operating assets, the cost of equity, terminal growth, the terminal return on capital, the tax rate, the cost of debt, the working-capital change, the debt policy, the target leverage, the year that target starts, and the distribution [D32].

None of the three cases has a sanity flag [D32]. The base-case validation warning, in the result's own words: "forecast evidence mentions acquisitions but the case has none, so MnA stays zero" [D32]. The bear case carries the same warning [D32]. The bull case repeats it and adds, in the result's own words: "average EBITDA growth is 14.6% and there are no acquisitions. If that growth includes acquired EBITDA, use an organic path and book the purchase price with acquisitions, or MnA stays zero." [D32]. The forecast records that management is evaluating acquisitions and that none is pending, and the closed APM deal is already inside the reported history [G1]. This case books no future purchase, so the acquisition line stays zero [D32].

Fetched market inputs, all from Yahoo on 9 November 2026: a price of $61.20, a risk-free rate of 4.859%, and 3.20 million shares [D32]. Year-0 revenue, EBITDA, capex, debt and cash are Yahoo's as well [D32]. Finagle commit `377f177b4013e713fe7c4603962e5f883a67e298`. The run was at 9:00 a.m. Toronto time on 9 November 2026 [D32].

Figure 14 splits base equity value into the explicit horizon and the terminal value. The split is our arithmetic on Finagle's terminal cash flow and is marked derived [C314]. The value per share is Finagle's [D32].

Figure 14 – Value bridge, base case

US$M, except per share and the percentage	Base
PV of explicit-period free cash flow to equity (derived)	53.7
PV of terminal value (derived)	64.8
Terminal share of equity (derived)	54.7%
Equity value	118
Firm value	137
Less: year-0 debt	18.9
Plus: year-0 cash	9.3
Value per share (US$)	39.92
Price (US$)	61.20
Vs. price (derived)	−34.8%

Source: `valuation_result_v03.json` *[D32]; bridge split [C314]. May not sum due to rounding. Firm value minus debt plus cash is not equal to equity value; the two are discounted on different rates [D32]. Equity value divided by the share count is $37.00, which is not the $39.92 value per share (derived) [C315][D32].*

Figure 18 is Finagle's base-case statement through FY2031E. Figure 19 continues it through FY2036E. The value per share, $39.92, is the result for the case. It is not a row in the statement, and equity value divided by the share count is $37.00 (derived) [C315, D32]. The statement has no stock compensation, interest, pre-tax income, tax-loss, cash-tax, working-capital, WACC, or value-per-share row [D32]. The dividend field is free cash flow to equity per share (derived) [C316]. Balance-sheet cash is zero from FY27E while the cash row keeps rising [D32]. The result dates year 2 as 29 June 2028, and some later years fall a day or two off 30 June. The columns use the fiscal year in that date [D32].

Figure 18 – Finagle valuation table, base case, FY2026A–FY2031E

PDEX. Price US$61.20. Shares 3.20 million. Cost of equity 10.4%. Cost of debt 4.3%. Tax rate 21%. Terminal growth 4.9% [D32].

US$M	FY2026A	FY2027E	FY2028E	FY2029E	FY2030E	FY2031E

Figure 15 sets the three values against the same price. The spread is the path after FY2028E. The medium-term organic growth forecast is 1.9% in the base and 4.0% in the bull, and the bear is −10%, with the same 25% contribution margin [S14, S18, S20, S13].

Figure 15 – Scenarios vs. price

	Bear	Base	Bull
Value per share (US$)	6.24	39.92	52.81
Price (US$)	61.20	61.20	61.20
Vs. price (derived)	−89.8%	−34.8%	−13.7%

Source: `valuation_result_v03.json` *[D32][C314].*

No sensitivity run was requested.

The $39.92 is a model value, not a rating and not a price target. About 54.7% of base equity value is the terminal value [C314]. The share count stays at 3.20 million, so the result includes no dilution [D32]. Year-0 financials and the market inputs are Yahoo's on 9 November 2026, not a fresh reading of the Form 10-K [D32]. The tax rate and the empty tax-loss balance are Finagle defaults [D32]. Debt follows the filled target of about 1.3x year-0 EBITDA from FY2027E, because no debt policy was stated [D32]. Balance-sheet cash goes to zero after FY2026A while the cash row accumulates, and the dividend row is free cash flow to equity per share [D32, C316]. The bull warning remains: average EBITDA growth of 14.6% is paired with an acquisition line of zero [D32].

Appendix A – Bull and Bear Cases

Figure 7 gives the headline spread. Unlike the body, the following appendix tables show the non-base shipment, economics and line builds.

Figure 7 – Scenario financials

Case	Year	Revenue	EBITDA	Gross margin	EBITDA margin
Bear	FY27E	78.3 [C70]	12.9 [C72]	30.9% [C274]	16.5% [C74]
Bear	FY28E	70.7 [C71]	10.2 [C73]	30.8% [C277]	14.4% [C75]
Base	FY27E	82.7 [E1]	15.5 [C23]	32.3% [C272]	18.7% [C36]
Base	FY28E	86.8 [E2]	16.5 [C24]	32.5% [C275]	19.0% [C37]
Bull	FY27E	85.0 [C51]	17.1 [C53]	33.4% [C273]	20.1% [C55]
Bull	FY28E	92.1 [C52]	19.8 [C54]	34.4% [C276]	21.5% [C56]

Source: forecast.json; explicit stream economics plus case core margins. May not sum due to rounding.

The same cases are worth $6.24, $39.92 and $52.81 a share [D32]. Figure 15 compares those values with the price.

The bull assumes timely validation, clearance and commercialization [S23]. Core medical-device sales are $1.00M above base in each year and repairs are $0.500M above base [S15]. Explicit high Monogram and Helios allocations replace—not supplement—the central contributions already within consensus [S28]. The previous combined Monogram/Helios allowance is removed [S15, S28].

The bear assumes no commercial launch through FY28, with delayed validation shipments [S23]. It reduces core medical devices by $3.00M/$8.00M and repairs by $1.00M/$1.50M vs. base [S16]. Low Monogram and zero Helios replace the central allocations [S16, S27, S28]. Core gross margins are distinct from the stream-specific robotics margins in each case [S17, S19, S24].

Figure 8 makes the uncertainty bounds operational: shipment realization, price and utilization all change, rather than a royalty number being applied to an unsupported procedure pool.

Figure 8 – Non-base operating paths

Case	Year	Conditional robots	Expected shipped	Validation kits	Kit ASP, $	Procedure equivalents	Fee rate
Bull	FY27E	25 [S94]	25 [C211]	10 [S96]	7500 [S98]	562 [C221]	8.0% [S103]
Bull	FY28E	279 [S110]	279 [C240]	0 [S112]	7500 [S114]	29610 [C250]	8.0% [S119]
Bear	FY27E	0 [S30]	0 [C95]	0 [S32]	3500 [S34]	0 [C105]	2.0% [S39]
Bear	FY28E	0 [S46]	0 [C124]	10 [S48]	3500 [S50]	0 [C134]	2.0% [S55]

Source: unchanged robotics_model.csv [S23][S24][S25]. May not sum due to rounding.

The high kit price of $7,500 assumes $3,000 materials, twelve hours at $75 and $975 overhead, giving thirty-five-percent hardware gross margin [S24]. The low $3,500 price assumes $1,600 materials, eight hours at $60 and $545 overhead, giving twenty-five percent [S24]. These are cost-estimating bounds, not unredacted contract prices [S24]. Both use four kits per new commercial system and restrained spares on the beginning fleet [S24].

High utilization is 180 procedures per active system-year [S23]. High eligible purchases are $500 per procedure-equivalent and the fee is eight percent, with stocking ahead of use [S25]. Low commercial procedures and fees are zero within the forecast window [S23, S25]. A future custom-implant opportunity is not included by treating ordinary implants as eligible [S25].

The bull FY28 Monogram total meets the annualized second-customer comparator, about $9.95M [S23, C268]. The base meets the FY26 comparator, about $6.20M [S23, C267]. Neither figure identifies the customer that accounts for 78% of sales [G17, A36].

Figure 9 separates engineering from manufactured kits and purchase fees in each non-base path.

Figure 9 – Non-base stream economics

Case	Year	Hardware	NRE	Fees	Monogram total	Gross profit	Incremental EBITDA	Helios
Bull	FY27E	0.8 [C228]	0.2 [S104]	0.0 [C229]	1.1 [C232]	0.4 [C233]	0.3 [C236]	0.3 [S109]
Bull	FY28E	8.4 [C257]	0.2 [S120]	1.4 [C258]	10.0 [C261]	4.4 [C262]	4.0 [C265]	0.5 [S125]
Bear	FY27E	0.0 [C112]	0.1 [S40]	0.0 [C113]	0.1 [C116]	0.0 [C117]	0.0 [C120]	0.0 [S45]
Bear	FY28E	0.0 [C141]	0.1 [S56]	0.0 [C142]	0.1 [C145]	0.0 [C146]	0.0 [C149]	0.0 [S61]

Source: unchanged robotics_model.csv [S24][S25][S26][S27]. May not sum due to rounding.

The high engineering margin is forty percent and low is twenty-five percent [S26]. Additional shared support is $0.100M/$0.250M in the bull and $0.0400M/$0.0600M in the bear [S26]. Fee contribution remains eighty-five percent before that support [S25]. No new fee gross margin or acquired-asset savings are silently applied to the entire company [S25, S28].

Figures 10 and 11 show the reported-line allocations underlying the headline cases.

Figure 16 puts the three cases' valuation inputs next to each other. The market rates are the same. The starting margin and the growth after FY28E are the forecast's.

Figure 16 – Valuation inputs, three cases

Input	Base	Bear	Bull	Where it came from
Cost of equity	10.4%	10.4%	10.4%	Finagle default: 5.5 points over the 10-year yield [D32]
Cost of debt	4.3%	4.3%	4.3%	Finagle assumption: year-0 interest divided by year-0 debt [D32]
Tax rate	21%	21%	21%	Finagle assumption: US federal statutory rate [D32]
Terminal growth	4.9%	4.9%	4.9%	Finagle default: the 10-year yield [D32]
Shares (millions)	3.20	3.20	3.20	Yahoo, fetched [D32]
Price (US$)	61.20	61.20	61.20	Yahoo previous close [D32]
Year-0 debt	18.9	18.9	18.9	Yahoo [D32]
Year-0 cash	9.3	9.3	9.3	Yahoo [D32]
Starting margin	19.0%	14.4%	21.5%	Forecast file [C40][C78][C59]
Incremental margin	25.0%	25.0%	25.0%	Forecast judgment [S13]
Medium-term organic growth	1.9%	−10.0%	4.0%	Forecast path [S14][S20][S18]
Terminal WACC	9.4%	7.8%	9.4%	Finagle output [D32]
Value per share (US$)	39.92	6.24	52.81	Finagle output [D32]

Source: `valuation_result_v03.json` [D32]; forecast leaves [C40][C78][C59][S13][S14][S20][S18]. Full precision is in Appendix B.

Figure 17 is the same bridge as Figure 14, for all three cases. The split is our arithmetic [C314]. The value per share is Finagle's [D32].

Figure 17 – Value bridge, three cases

US$M, except per share and percentages	Bear	Base	Bull
PV of explicit-period free cash flow to equity (derived)	5.6	53.7	71.8
PV of terminal value (derived)	5.0	64.8	87.9
Terminal share of equity (derived)	47.2%	54.7%	55.0%
Equity value	10.6	118	160
Firm value	29.6	137	179
Year-0 debt	18.9	18.9	18.9
Year-0 cash	9.3	9.3	9.3
Value per share (US$)	6.24	39.92	52.81
Price (US$)	61.20	61.20	61.20
Vs. price (derived)	−89.8%	−34.8%	−13.7%

Source: `valuation_result_v03.json` [D32]; bridge split [C314]. May not sum due to rounding. Firm value minus debt plus cash is not equal to equity value; the two are discounted on different rates [D32].

Figure 22 is the bull medium-term organic growth forecast, built the same way as Figure 21 [S18].

Figure 22 – Medium-term organic growth, bull case

US$M	FY2028E	FY2029E	Change
Medical devices ex hardware	70.5 [C300]	72.6 [C301]	2.1
Industrial and scientific	3.1 [C302]	3.3 [C303]	0.2
NRE ex engineering	1.1 [C304]	1.1 [C305]	0.0
Repairs	7.3 [C306]	5.9 [C307]	−1.4
Discounts ex fee	0.2 [C308]	0.2 [C309]	0.0
Monogram cohort	10.0 [C310]	12.8 [C311]	2.8
Total	92.1 [C52]	95.8 [C312]	3.7
Medium-term organic growth			4.0% [C313]

Source: forecast.json bull `gsnext_bridge` [C300][C301][C302][C303][C304][C305][C306][C307][C308][C309][C310][C311][C312][C313][S18]. May not sum due to rounding.

Figure 20 keeps the key rows of the bull and bear statements. The bear has no sanity flag. Its later free cash flow to equity prints at about zero [D32]. The path is printed as Finagle left it.

Figure 20 – Bull and bear, key rows

US$M	Bear FY2026A	Bear FY2028E	Bear FY2036E	Bull FY2026A	Bull FY2028E	Bull FY2036E
Revenue	77.5	70.7	52.8	77.5	92.1	130
EBITDA	15.1	10.2	5.7	15.1	19.8	29.2
FCFE	8.7	1.2	0.0	8.7	13.3	12.5
Equity value	10.6	6.8	13.4	160	168	235
Value per share (US$)	6.24	—	—	52.81	—	—

Source: Finagle bear and bull statements in `valuation_result_v03.json` [D32]. The value per share is the result for the case, not a figure that changes by year. May not sum due to rounding.

A29 Gross profit FY26A. (D1, page unverified)

A30 Gross profit Q1FY27A. (D3, page unverified)

A31 Total operating expenses, three months ended Sept 30, 2026: 3,342 (US$ thousands). (D3, page unverified)

A32 Cash and cash equivalents June 30, 2026: $8,192K. (D3, page unverified)

A33 Investments (current) June 30, 2026: $1,150K. (D3, page unverified)

A34 3,186,135 shares issued and outstanding at June 30, 2026. (D3, page unverified)

A35 FY26: $500,000 in non-recurring consulting fees paid to the former owner of APM (MD&A). (D1, p.21)

A40 FY26: approximately $434,000 in acquisition-related costs primarily included in SG&A (business-combination note). (D1, p.39)

A36 [largest customer] accounted for 78% of sales with our next largest customer accounting for 8% of sales. (D1, page unverified)

A37 On October 7, 2025, Zimmer Biomet ... completed its acquisition of Monogram and ... we received $4.04 per share in cash for each of the 2,212,378 common shares ... total proceeds of $8.9 million ... realized gain in the amount of $6.8 million. (D1, page unverified)

A38 during the third quarter ended March 31, 2026, Monogram successfully completed the first of five milestones such that we earned and recorded an additional gain in the amount of $2.3 million. (D1, page unverified)

A39 PaymentsForRepurchaseOfCommonStock FY26 = 3,408 (US$ thousands). (D12, n/a)

A41 The consolidated income statement for the year ended June 30, 2026, includes $719,000 of revenue and $84,000 of income before income taxes ... generated from APM. Not standalone annual EBITDA; APM was acquired February 9, 2026. (D1, p.39)

A42 September 30, 2026 cash $11.759M, current investments $1.230M, notes payable carrying value $16.441M, shares 3,203,334; October 28 cover count 3,200,001. (D2, balance sheet and cover; page unverified)

A43 "next largest customer accounting for 8% of sales" FY26; "75% and 12%, respectively" FY25. Rounded percentages, not exact customer dollars. (D1, p.2)

A44 Customer 2: 2,487 thousand (12%) in quarter ended September30,2026; 1,091 thousand in prior-year quarter. (D2, Note10)

Guidance and management statements

G1 No pending acquisition disclosed; FY26 CEO letter says management is evaluating acquisitions, none named. (D14, page unverified)

G14 Q3 FY26: approximately $200,000 in non-recurring legal and consulting fees related to the APM acquisition (earnings release). (D5, page unverified)

G2 At September 30, 2026, we had a backlog of approximately $43.1 million, of which $42.4 million is scheduled for delivery during the remainder of fiscal 2027. (D2, p.21)

G3 we expect to see similar levels of revenue reported in orthopedic sales through 2028. (D1, p.19)

G4 $195,000 of higher personnel costs specifically related to accounting, mergers and acquisitions, human resources, and information technology. (D3, page unverified)

G5 the exclusive supplier used to provide the proprietary medical grade finish of many parts of the next generation handpiece is experiencing delays ... shipments will resume on a timely basis by mid-November, there is a risk that we may fall behind in our shipments to our largest customer. (D2, p.21)

G6 the contract extension we executed with our largest customer during the second quarter of the prior fiscal year no longer includes volume rebates. (D2, p.22)

G7 Recurring revenue from distributors of CMF drivers increased $1.1 million, or 39% ... Our NRE and proto-type revenue is typically a small percentage of our total revenue and can vary significantly from quarter to quarter. (D2, p.21)

G8 Repair revenue decreased by $1.7 million, or 44% (10-Q); beginning in fiscal 2027 we expect to commence billable repairs of our customer's next generation handpiece but we do not know yet at what volumes (10-K). (D2/D1, p.21 / p.19)

G9 the Helios driver for CMF applications ... has been released for production. Although this product has been released, and we have had interest in this product, there is no guarantee that our existing customers or new customers will purchase this new driver. (D2, page unverified)

G10 We expect to ship validation units in the second half of this fiscal year. (Q1 FY27 10-Q filed October 29, 2026; January–June 2027.) (D2, MD&A; page unverified)

G11 Early this year, we have made a conscious decision as a company and board to actively pursue safe and sane mergers or acquisitions. (June 17, 2026 CEO presentation.) (D21, HTML; no page numbers)

G12 We expect to see similar sales volumes of our largest customer's next generation and legacy handpiece for the remainder of this fiscal year. (D2, p.21)

G13 Gross margin decreased from 27% ... to 20% ... due to unfavorable product mix, and higher indirect manufacturing costs including the initial wave of tariff costs ... [customer] released their product hold. (D8, page unverified)

G15 Buyer shall pay Seller a fee equal to [***]% ... of the gross purchase price paid by Buyer per unit ... multiplied by the number of units ... purchased. Sourced Products include burrs, sagittal saw blades and custom patient-specific implants; not the robotic arm, navigation cameras or drapes. Percentages and hardware target gross margins are redacted. (D18/D25, Section 2.5 and Schedule 1)

G16 Seller Supplied Products include autoclavable electromechanical end effectors ... mounted to robotic arms ... for use in milling bone cavities and End Effector gearing accessories. Hardware prices reset to a redacted target gross margin; engineering services are billed time and materials under Section 15. (D18/D25, Schedule 1)

G17 I think within a couple of years, they could definitely be customer number two. ... not able to tell you how good. (Monogram; June 17, 2026 CEO statement, not a quantified order.) (D21, HTML; no page numbers)

G18 We now anticipate that we can launch a surgeon-guided fully autonomous version of Monogram in the first half of 2027 ... filing a 510(k) does not mean an approval. (November 4, 2026 CEO statement.) (D22, HTML; no page numbers)

G19 Repair margins are significantly lower than in the previous fiscal-year quarter because of more expensive component replacement and the assembled workforce normally repairing higher volume. (D2, MD&A; page unverified)

G20 "The average monthly utilization per system was 6.6 procedures during the fourth quarter of 2012"; "A total of 45 new RIO systems were sold worldwide in 2012". February26,2013. Historical analog, not Monogram guidance. (D27, Recent Business Developments)

G21 "The base rent from November 1, 2026 through February 29, 2028 is $11,600 per month", then "$12,064" from March1,2028. (D28, Item1.01)

Estimates

E1 Equibles compiled consensus, FY ending 2027-06-30 Revenue average 82.70M, 1 analyst, publication date not stated; provider capture October 30, 2026 at 12:17 EDT (America/Toronto); re-opened November 7; analyst publication date unknown. (D13, page unverified)

E2 Equibles compiled consensus, FY ending 2028-06-30 Revenue average 86.80M, 1 analyst, publication date not stated; provider capture October 30, 2026 at 12:17 EDT (America/Toronto); re-opened November 7; analyst publication date unknown. (D13, page unverified)

Assumptions

S1 Opex inflation into FY28: personnel build (accounting, M&A, HR, IT) named in Q1 FY27 release and Irvine lease step-ups of 3.5% from Oct 2027 (8-K 2026-09-18). Judgment. (D3, page unverified)

S2 Medical devices FY27: Q1 FY27 x4. 10-Q: 'We expect to see similar sales volumes of our largest customer's next generation and legacy handpiece for the remainder of this fiscal year.' Backlog $42.4M due in rest of FY27. (D2, p.21)

S3 Medical devices FY28: FY27 +3%. 10-K: 'we expect to see similar levels of revenue reported in orthopedic sales through 2028'; growth from CMF distributors (+39% in Q1 FY27) only. Clarification: 3% applies to total medical-device revenue; the dollar increase is attributed to CMF, not a claim that CMF itself grows only3%. (D1, p.19)

S4 Industrial and scientific FY27: Q1 FY27 x4 (APM third-party sales; acquired Feb 2026). (D2, p.21)

S5 Industrial and scientific FY28: +5%, APM defence/aerospace machining; no company guide. (D2, p.21)

S6 Original unscaled NRE1.2 retained; contains central Monogram engineering0.15 FY27 and0.10 FY28 as an allocation. Validation hardware is in medical devices. See S26. (D2, p.21)

S7 NRE FY28 held at FY27; no stated program amounts. (D2, p.21)

S8 Repairs FY27: Q1 FY27 x4; legacy repair decline ('we may continue to see declines') offset by start of billable next-gen repairs (10-K: 'we do not know yet at what volumes'). (D2, p.21)

S9 Repairs FY28: legacy repairs keep falling as customer replaces legacy handpieces; next-gen repairs partly offset. (D1, p.19)

S10 Discounts and other FY27: volume rebates removed by contract extension (10-Q: 'no longer includes volume rebates'); Q1 +0.059. (D2, p.22)

S11 Discounts and other FY28 held at FY27. (D2, p.22)

S12 APM (acquired Feb 2026) is inside FY26A actuals and too small to split; path is total. (D1, page unverified)

S13 mc stays 25% in every case. The rank path is mostly hardware at an ordinary gross margin, so the fee stream does not reprice the company-wide contribution margin. See S29. (D1, page unverified)

S14 Base medium-term organic growth = FY29 88.43440286873361 / FY28 revenue − 1. Lines keep their trajectory and the Monogram cohort is one more year: medical devices excluding hardware 69.439154 to 71.522328; industrial 3.108000 to 3.263400; NRE excluding engineering 1.065707 to 1.065707; repairs 6.781769 to 5.387470; discounts excluding the fee 0.193765 to 0.187320; Monogram cohort 6.211606 to 7.008178. Not a round rate. (D1, p.19)

S15 Bull: core medical devices +1/+1 and repairs +0.5/+0.5 US$M vs base; core GM33.5%; replace embedded central Monogram/Helios with explicit high path, not old combined NRE allowance. See S23-S28. (D2, p.21)

S16 Bear: core medical devices -3/-8 and repairs -1/-1.5 US$M vs base; core GM31%; replace embedded central Monogram/Helios with low/delayed path. See S23-S28. (D2, p.21)

S17 bull gross margin lever: see bull levers (D2, page unverified)

S18 Bull medium-term organic growth = FY29 95.79559952145739 / FY28 revenue − 1. Lines keep their trajectory and the Monogram cohort is one more year: medical devices excluding hardware 70.489154 to 72.603828; industrial 3.108000 to 3.263400; NRE excluding engineering 1.065707 to 1.065707; repairs 7.281769 to 5.867504; discounts excluding the fee 0.193765 to 0.187320; Monogram cohort 9.978780 to 12.807840. Not a round rate. (D1, p.19)

S19 bear gross margin lever: see bear levers (D2, page unverified)

S20 Bear gsnext stays −10%. That is the customer-1 renewal after calendar 2028, and it does not set the base. (D1, p.19)

S21 No capex guidance; capex method 1 for all years (standing preference). (D1, page unverified)

S22 Validation units are not established commercial revenue. Operative contract verifies end-effectors, gearing and sourced-product fees; prices, percentage rates, annual volume and margins remain unquantified. Bull allocation is a scenario assumption, not a customer order. (D18/D25/D2, n/a)

S23 Monogram timing/volume. FY27 validation 0/10/10 and conditional commercial systems 0/10/25 stay the validation year. FY28 conditional systems are solved to the second-customer band: base 348 at 70% realization, bull 279 at 100%. The old 120/200 plans were not a company cap. Central on-time shipment realization 40%/70%; low0%, high100%; p weights commercial shipments only, not engineering/validation. FY27 active system-years = expected new systems /8 (Q4 rollout); FY28 = prior expected systems + half current additions. Central 120 cases per active system-year; high180. MAKO2012 ~79 annualized is a restraint, not a like-for-like forecast; established Zimmer channel supports faster launch but no ROSA conversions assumed. (D22, page unverified)

S24 Hardware cost/price judgments: low materials1600 +8h*60 +overhead545 =2625 cost, price3500, GM25%; central materials2500 +10h*70 +overhead850 ~4050, rounded price6000 and TTM32.4516% GM; high materials3000 +12h*75 +overhead975 =4875, price7500, GM35%. Each priced kit includes one end effector plus gearing; 4 per new robot (one in use, backup/sterilization rotation), not a disclosed specification. Spares 5% of beginning installed fleet kits, no replacements of current-year kits, no repair revenue inside window. All prices and staffing are analyst estimates, not recovered redactions. (D25, page unverified)

S25 Fee judgments: central eligible burr/blade purchases300 dollars per case-equivalent, rate5%; high500 and8%; low no commercial launch. Purchases/use inventory factor1.30FY27,1.15FY28 central /1.20FY28 high. Exclude standard Persona implants (not patient-specific custom implants), robotic arms, navigation cameras, drapes, taxes, freight, packaging. Fee GP95%, incremental EBITDA85% before shared launch support: allow5% direct processing and10% admin expense. Rates and basket costs unobservable; range is scenario judgment, not a statistical interval. (D25, page unverified)

S26 Engineering revenue included within original NRE budget, not added twice: low0.05/0.05, central0.15/0.10, high0.20/0.15 US$M FY27/FY28; central FY27 about1000billable hours at150 dollars/hour, FY28 roughlytwo-thirds that workload as setup ends. GM25%/35%/40% low/central/high. Incremental shared launch support beyond current run rate0.04/0.06 low,0.04/0.10 central,0.10/0.25 high US$M. Covers QA/customer support/engineering contingency; permanent existing staff retained. No additional D&A assumed within existing capacity; risk if tooling/capex expands. (D18, page unverified)

S27 Helios separated: central0.15/0.45 US$M already allocated within CMF line run-rate/growth (illustratively50/150 drivers at3000 each); high0.25/0.50; low0/0. No author50–65% GM adopted; apply respective case core margins. Label/software engineering remains in existing NRE, no second setup-fee uplift. Product released, no disclosed orders: sizing is modest channel trial judgment. (D21, page unverified)

S28 Retain consensus base82.7/86.8, unknown product coverage; Monogram/Helios are explicit allocations inside total. Replace old bull0.5/1.0 combined allowance, do not stack. Bull/bear differences = unchanged core volume/ repair shocks plus pipeline HIGH/LOW minus CENTRAL already in base. Acquired industrial line unscaled. Scale residual non-APM core only to preserve modeled pipeline amounts. (D13, page unverified)

S29 FY28 explicit stop retained. Base and bull FY28 Monogram are the second-customer band, not a cross-check. The medium-term organic growth forecast keeps each other line on its own trajectory and adds one more year of the FY28 system cohort. Bear gsnext is the customer-1 renewal. mc stays 25% because the cohort is mostly hardware and the continuing lines are ordinary core business. (D22, page unverified)

S30 bear FY27E: conditional_new_systems = 0. Analyst judgment, not disclosed contract terms; rationale and bounds in S23. (D22, page unverified)

Prompt overrides

P1 David May instruction (t160u, 2026-11-06 America/Toronto): acquisition related costs are one-time. Integration cost related to the acquisition maybe continue in the short term if the integration work isn't completed, but should be removed when they do. (D1, page unverified)

Calculations

C1 EBITDA (defined) = operating income + D&A + stock comp, FY25A. Inputs: A19, A22, A25.

C2 EBITDA (defined) = operating income + D&A + stock comp, FY26A. Inputs: A20, A23, A26.

C3 EBITDA (defined) = operating income + D&A + stock comp, Q1FY27A. Inputs: A21, A24, A27.

C4 Trailing-four-quarter gross margin Q2 FY26-Q1 FY27: GP (5.743+6.133+7.091+6.857)/net sales (18.663+19.949+20.405+20.560); Q4 FY26 = FY26 less 9M. Inputs: D12, D3.

C5 FY27 operating expense = Q1 FY27 run rate x4; Q1 has no remaining APM acquisition-related costs ($0.434M was FY26) and no company-flagged one-time; integration costs not separately disclosed so left in run rate [P1, A40, A35, G14]. Inputs: A31.

C6 FY28 opex = FY27 opex x (1 + inflation). Inputs: C5, S1.

C7 D&A + SBC add-back FY27 = Q1 FY27 (0.403 + 0.135) x4. Inputs: A24, A27.

C8 D&A + SBC add-back FY28 = FY27 x1.03. Inputs: C7, S1.

C9 Unscaled core lines plus Monogram hardware and purchase fees; engineering and Helios allocated within prior budgets. Inputs: S2, S3, S6, S23, S24, S25, S26, S27.

C10 Unscaled core lines plus Monogram hardware and purchase fees; engineering and Helios allocated within prior budgets. Inputs: S2, S3, S6, S23, S24, S25, S26, S27.

C11 (Consensus - APM - central Monogram - Helios)/(unscaled core excluding APM, allocated Monogram engineering, Helios). Inputs: S28, E1, E2, S23.

C12 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C13 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C14 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C15 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C16 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C17 (Consensus - APM - central Monogram - Helios)/(unscaled core excluding APM, allocated Monogram engineering, Helios). Inputs: S28, E1, E2, S23.

C18 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C19 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C20 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C21 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C22 v4 residual-core consensus allocation; APM and explicit Monogram/Helios amounts unscaled. See S28. Inputs: S28, S23, S24, S25, S26, S27.

C23 (Revenue-Monogram)*coreGM + MonogramGP - newAPMmanufacturingrent - opex + D&A+SBC - feeadmin - incremental launchsupport. Inputs: S23, S24, S25, S26, C5, C6, C7, C8, G21.

C24 (Revenue-Monogram)*coreGM + MonogramGP - newAPMmanufacturingrent - opex + D&A+SBC - feeadmin - incremental launchsupport. Inputs: S23, S24, S25, S26, C5, C6, C7, C8, G21.

C25 Unscaled revenue cost build with stream-specific robotics GP, launch support and APM lease. Inputs: S23, S24, S25, S26, G21.

C26 Unscaled revenue cost build with stream-specific robotics GP, launch support and APM lease. Inputs: S23, S24, S25, S26, G21.

C27 FY25 gross margin. Inputs: A28, A16.

C28 FY26 gross margin. Inputs: A29, A17.

C29 Medical devices FY26 YoY growth. Inputs: A1, A6.

C30 Industrial and scientific FY26 YoY growth. Inputs: A2, A7.

C31 NRE and prototype services FY26 YoY growth. Inputs: A3, A8.

C32 Repairs FY26 YoY growth. Inputs: A4, A9.

C33 Discounts and other FY26 YoY growth. Inputs: A5, A10.

C34 Total FY26 YoY growth. Inputs: A16, A17.

C35 EBITDA FY26 YoY growth. Inputs: C1, C2.

C36 EBITDA / revenue after robotics stream costs and new lease. Inputs: S28, S26, G21.

C37 EBITDA / revenue after robotics stream costs and new lease. Inputs: S28, S26, G21.

C38 Base revenue growth FY27, FY28 (total basis; APM consolidated since Feb 2026 and in FY26A). Inputs: A17, E1, E2.

C39 Base EBITDA growth FY27, FY28. Inputs: C2, C23, C24.

C40 Base FY28 EBITDA / FY28 revenue. Inputs: C24, E2.

C41 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C42 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C43 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C44 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C45 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C46 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C47 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C48 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C49 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C50 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C51 Case revenue = base total + core volume/repair shocks + case Monogram/Helios minus central already included. Inputs: S15, S16, S28.

C52 Case revenue = base total + core volume/repair shocks + case Monogram/Helios minus central already included. Inputs: S15, S16, S28.

C53 (Revenue-Monogram)*coreGM + MonogramGP - newAPMmanufacturingrent - opex + D&A+SBC - feeadmin - incremental launchsupport. Inputs: S23, S24, S25, S26, C5, C6, C7, C8, G21.

C54 (Revenue-Monogram)*coreGM + MonogramGP - newAPMmanufacturingrent - opex + D&A+SBC - feeadmin - incremental launchsupport. Inputs: S23, S24, S25, S26, C5, C6, C7, C8, G21.

C55 EBITDA / revenue after robotics stream costs and new lease. Inputs: S28, S26, G21.

C56 EBITDA / revenue after robotics stream costs and new lease. Inputs: S28, S26, G21.

C57 Bull revenue growth FY27, FY28 (total basis; APM consolidated since Feb 2026 and in FY26A). Inputs: A17, C51, C52.

C58 Bull EBITDA growth FY27, FY28. Inputs: C2, C53, C54.

C59 Bull FY28 EBITDA / FY28 revenue. Inputs: C54, C52.

C60 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C61 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C62 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C63 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C64 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C65 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C66 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C67 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C68 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C69 v4 base line plus core shock and explicit case-minus-central pipeline allocation. Inputs: S15, S16, S28.

C70 Case revenue = base total + core volume/repair shocks + case Monogram/Helios minus central already included. Inputs: S15, S16, S28.

C71 Case revenue = base total + core volume/repair shocks + case Monogram/Helios minus central already included. Inputs: S15, S16, S28.

C72 (Revenue-Monogram)*coreGM + MonogramGP - newAPMmanufacturingrent - opex + D&A+SBC - feeadmin - incremental launchsupport. Inputs: S23, S24, S25, S26, C5, C6, C7, C8, G21.

C73 (Revenue-Monogram)*coreGM + MonogramGP - newAPMmanufacturingrent - opex + D&A+SBC - feeadmin - incremental launchsupport. Inputs: S23, S24, S25, S26, C5, C6, C7, C8, G21.

C74 EBITDA / revenue after robotics stream costs and new lease. Inputs: S28, S26, G21.

C75 EBITDA / revenue after robotics stream costs and new lease. Inputs: S28, S26, G21.

C76 Bear revenue growth FY27, FY28 (total basis; APM consolidated since Feb 2026 and in FY26A). Inputs: A17, C70, C71.

C77 Bear EBITDA growth FY27, FY28. Inputs: C2, C72, C73.

C78 Bear FY28 EBITDA / FY28 revenue. Inputs: C73, C71.

C79 Bottom-up / base revenue FY27E. Inputs: C9, E1.

C80 Consensus / base revenue FY27E (base is Consensus). Inputs: E1.

C81 Bottom-up / Consensus revenue FY27E. Inputs: C9, E1.

C82 Bottom-up / base EBITDA FY27E (base is bottom-up cost build). Inputs: C23.

C83 Bottom-up / base revenue FY28E. Inputs: C10, E2.

C84 Consensus / base revenue FY28E (base is Consensus). Inputs: E2.

C85 Bottom-up / Consensus revenue FY28E. Inputs: C10, E2.

C86 Bottom-up / base EBITDA FY28E (base is bottom-up cost build). Inputs: C24.

C87 Cash 8.192 + current investments 1.150 at June 30, 2026; no equity raise after FY-end (no S-3/S-1/424 filings; share count moved only by equity awards). Inputs: D3.

C88 Notes payable current 4.205 + non-current 13.266 at June 30, 2026 (excludes lease liabilities). Inputs: D3.

C89 Quarterly revenue and EBITDA: XBRL quarterly values; Q4 = FY less 9M; Q2/Q3 D&A and SBC = YTD differences. Inputs D3-D12. Inputs: D3, D4, D5, D6, D7, D8, D9, D10, D11, D12.

C90 FY26 largest-customer scale = $77.548M × 78% = $60.48744M. Revenue concentration does not identify an OEM. Inputs: A17, A36.

C91 If the user elects a hypothetical $50 effective fee per eligible procedure and 30,000–60,000 procedures, annual revenue would be $1.5M–$3.0M. Neither fee, procedures, eligibility nor incremental EBITDA margin is verified; purchase-based contractual fees need not equal a flat fee per surgery. Inputs: D17, G15.

C92 September 30, 2026 cash plus current investments = 11.759 + 1.230 = $12.989M; distinct from June 30 year-0 $9.342M. Inputs: A42.

C95 bear FY27E: expected_new_systems; calculation in robotics_model.csv / build_v4.py. Inputs: S30, S31.

C96 bear FY27E: begin_systems; calculation in robotics_model.csv / build_v4.py. Inputs: S23, S24, S25, S26, S27, S28.

C99 bear FY27E: spare_units; calculation in robotics_model.csv / build_v4.py. Inputs: C96, S33.

C100 bear FY27E: total_kit_units; calculation in robotics_model.csv / build_v4.py. Inputs: S32, C95, S33, C99.

C103 bear FY27E: active_system_years; calculation in robotics_model.csv / build_v4.py. Inputs: C96, C95.

C105 bear FY27E: procedure_equivalents; calculation in robotics_model.csv / build_v4.py. Inputs: C103, S36.

C109 bear FY27E: eligible_purchases_M; calculation in robotics_model.csv / build_v4.py. Inputs: C105, S37, S38.

C112 bear FY27E: hardware_revenue_M; calculation in robotics_model.csv / build_v4.py. Inputs: C100, S34.

C113 bear FY27E: fee_revenue_M; calculation in robotics_model.csv / build_v4.py. Inputs: C109, S39.

C116 bear FY27E: total_monogram_revenue_M; calculation in robotics_model.csv / build_v4.py. Inputs: S40, C112, C113.

C117 bear FY27E: gross_profit_M; calculation in robotics_model.csv / build_v4.py. Inputs: C112, S35, S40, S41, C113, S42.

C118 bear FY27E: fee_admin_M; calculation in robotics_model.csv / build_v4.py. Inputs: C113, S42, S43.

C120 bear FY27E: incremental_ebitda_M; calculation in robotics_model.csv / build_v4.py. Inputs: C117, C118, S44.

C124 bear FY28E: expected_new_systems; calculation in robotics_model.csv / build_v4.py. Inputs: S46, S47.

C125 bear FY28E: begin_systems; calculation in robotics_model.csv / build_v4.py. Inputs: S23, S24, S25, S26, S27, S28.

D13 consensus: one analyst, estimate publication date not stated; provider capture October 30, 2026 at 12:17 EDT (America/Toronto), re-opened November 7. D14/D15 proxy-letter review is inherited; not re-opened for v4. D21/D22 are verbatim-management transcripts hosted by third parties and not audio-verified; they corroborate statements, not outcomes. D18 schedule was read in the public D25 mirror; public pricing percentages remain redacted. D4–D9 cite the 8-K filing index; exhibit text was read from saved copies. D30 is the v01 Finagle result; D30 has no URL. D31 is the v02 Finagle result; D31 has no URL. D32, C314, C315 and C316 are the v03 Finagle result and the bridge on it; D32 has no URL. C286 through C313 are the medium-term organic growth bridge.

Appendix C – Method

This report rewrites the presentation only. The model and operating CSV are byte-for-byte copies of delivered v4; the original forecast used method revision be46f4a, while this report follows the repository report skill at a7b0f2a.

Bottom-up, top-down, calibrated top-down and consensus views are recorded separately. Revenue and EBITDA each have their own base; consensus sets revenue and the cost build sets EBITDA [E1, E2, C23, C24].

The valuation in Section 9 is a Finagle run on those same leaves. It does not change the operating forecast. Finagle supplies the price, the share count, the risk-free rate, the cost of equity, terminal growth, and the unstated tax rate, cost of debt, tax losses, working capital and debt target. The value per share comes only from that result [D32].

The inherited history window covers Q1 FY25 through Q1 FY27, nine reported quarters [C89]. Earnings releases substitute for unavailable quarterly calls; the June 2026 public CEO presentation supplements them, rather than replacing the full window [D3, D4, D5, D6, D7, D8, D9, D10, D11, D12, D21]. That history supports the one-time cost review and the assumptions after the explicit years [A40, A35, S29].

Mergers-and-acquisitions costs are one-time unless continuing costs are identified [P1]. Integration costs remain only while the work is unfinished; this forecast does not assume a quantified completion benefit without evidence [P1, D2]. A development product extends the explicit window only when its annual impact is sufficiently understood; otherwise its uncertainty is considered beyond that window, without adding pipeline revenue twice to near-term consensus [S28, S29].

Figure 12 retains the historical reference used in v4; it is not a new forecast or a normalization of reported EBITDA.

Figure 12 – Quarterly history (derived) [C89]

	Q1 FY25	Q2	Q3	Q4	Q1 FY26	Q2	Q3	Q4	Q1 FY27
Revenue	14.9	16.8	17.4	17.5	18.5	18.7	19.9	20.4	20.6
EBITDA	3.4	3.1	4.1	1.8	3.6	3.7	3.6	4.1	4.1

Source: D3–D12; Q4 = fiscal year less nine months; EBITDA = operating income + D&A + stock comp.
