Harrow, Inc. (NASDAQ: HROW)

Company Update: FY2026E–FY2032E Revenue and EBITDA Forecast

12 November 2026 (America/Toronto). US$ millions unless noted; per-share values in US$. This update includes a valuation but carries no rating or price target. The audit record is forecast.md / forecast.json in this folder, and the valuation result is in finagle-run-20261112/. Numbered sources are in Appendix B.

1. Estimate comparison

Figure 1 compares the FY2026E forecast with the company's published outlook and with the other recorded views. There is no current Consensus: no post-Q3 2026 estimate pull was taken, and a pre-Q3 print is not used as a current figure [P1].

For FY2026E, the published revenue outlook is the reaffirmed $350–365 range [G2]. The midpoint of that range is about 3% above the $348 product build [C10]. First-half 2026 revenue was below the original first-half range [G4, C3]. That miss is not carried into the reaffirmed full-year range, so a calibrated view is not shown [G2, C3]. The published Adjusted EBITDA outlook is the revised floor of more than $40, including more than $33 in the fourth quarter, as stated in the 9 November 2026 stockholder letter [G1]. That floor is about 8% below the $43.3 cost build [C10]. The outlook is a single-point floor, not a range, so no calibrated midpoint is shown [G1].

From FY2027E onward, there is no published revenue or Adjusted EBITDA guidance and no current Consensus. Figure 1 (continued) therefore shows only the product and cost build for those years.

Figure 1 – Estimate comparison, FY2026E (US$ millions)

The table shows each recorded view against the FY2026E base. A missing view is marked n/a.

	Revenue	vs. revenue base	Adjusted EBITDA	vs. EBITDA base
Bottom-up	348	1.00	43.3	1.00
Top-down	350–365	1.03 (midpoint)	40.0 (floor)	0.92
Calibrated top-down	n/a (not applied to the reaffirmed range)	n/a	n/a (single-point floor; no range)	n/a
Consensus	n/a (no post-Q3 2026 pull)	n/a	n/a (no post-Q3 2026 pull)	n/a
Base (bottom-up)	**348**	**1.00**	**43.3**	**1.00**

Figure 1 (continued) – Estimate comparison, FY2027E–FY2032E (US$ millions)

Later years have no published guidance and no current Consensus. The table therefore shows only the product and cost build for each year.

	FY2027E	FY2028E	FY2029E	FY2030E	FY2031E	FY2032E
Revenue base (bottom-up)	613	803	1,020	1,250	1,483	1,661
Adj. EBITDA base (bottom-up)	177	298	454	614	775	896
Top-down, calibrated top-down, Consensus	n/a	n/a	n/a	n/a	n/a	n/a

Source: views in forecast.json [C10][C14][P1]. Whole numbers at $100 and above. n/a: no published guidance and no post-Q3 2026 Consensus pull. May not sum due to rounding.

2. Summary

FORECAST UPDATE

■ **We forecast FY2026E revenue of $348 and Adjusted EBITDA of $43.3, below the low end of the reaffirmed $350–365 range, because the fourth-quarter product build sums to $134 [C1, C5, G2, C15].** Nine-month 2026 revenue was $214, so $136–151 is needed in the fourth quarter to hit the range [A2, C2]. The product build is $1.9 short of that implied fourth-quarter low end [C15, C2]. The shortfall is not closed by a plug [P1]. The 9 November 2026 stockholder letter also described reasonable scenarios of a modest miss, mostly because of order timing and year-end purchasing [G2]. Fourth-quarter Adjusted EBITDA is $36.0 [C5]. The full-year $43.3 sits above the letter's floor of more than $40, which includes more than $33 in the fourth quarter [C5, G1]. In the bear case, FY2026E Adjusted EBITDA is $34.0, below that floor; the path is in Appendix A.

■ **We forecast FY2027E revenue of $613 and Adjusted EBITDA of $177, because VEVYE, IHEEZO, and TRIESENCE continue on recent net unit additions and TYRVAYA contributes its first full year, while a modest YOCHIL program is added with no 2027 YOCHIL revenue [C10, C14, G5, S21, S22, S23, S33].** VEVYE is $264,

IHEEZO $116, and TRIESENCE $80.6 [S21, S22, S23]. Those figures are the output of held net-add rules and held realization, not of chosen annual growth rates [S21, S22, S23, P2]. TYRVAYA is $33 in FY2027E [S6]. That figure sits just above the company's 2027 revenue floor of more than $30 [G5]. Those dollars are Harrow product sales, not a profit share [G5, S6]. That floor depends on outstanding consent from Novaliq, the VEVYE licensor [G6]. It could change if U.S. and Canadian rights have to be divested, terminated, or modified [G6]. G-MELT and YOCHIL have no 2026 or 2027 revenue [S15, S32]. First G-MELT shipments, if the product is approved after a year-end 2026 filing and a Q4 2027 standard-review PDUFA, are assumed in 2028 [G7, G8, S15]. An assumed YOCHIL program of $6 sits on the existing Surgical team in FY2027E [S33].

■ **We put G-MELT in the FY2028E base at $10.5, rising to $146 in FY2032E, and YOCHIL at $1.53 rising to $32.2, because the company plans 2028 launches if the products are approved [S15, C12, S32, C16, G8, G19].** The November 2026 corporate presentation times a year-end 2026 G-MELT NDA and a Q4 2027 PDUFA on a standard review [G7, G18]. It shows a 2028 G-MELT launch that is conditional on approval [G8, G19]. G-MELT volume runs from a 60,000-unit mid-2028 stub to 750,000 units from FY2031E, held in FY2032E, at $175 to $195 per unit [S15, C12]. That 750,000 unit rate is 15% of the 5 million U.S. cataract surgeries used as the floor of the company's initial target, per the 11 November 2026 instruction that an FDA-approved product should exceed a 10% compounded reference [P4, G18, S15]. A 10% current annual MKO share is not a verified printed figure in the sources used [G22, G26, S15]. YOCHIL is a separate 3 mg midazolam ODT, not the cataract combo, and uses penetration of one-third of that year's IHEEZO customer units [G25, S32, P4]. A 2028 YOCHIL launch is tighter than G-MELT's, because Phase 3 is still ahead after an End-of-Phase 2 meeting completed in the second quarter of 2026 [G24, S32]. Both paths are unweighted and conditional [S15, S32]. The 100 million-plus short-duration opportunity, and the broader diagnostic and endoscopic market, stay out of the base [G18, S15, S32].

■ **We forecast FY2032E revenue of $1,661 and Adjusted EBITDA of $896, a 53.9% margin, because recent net unit additions are held constant on the large branded lines, G-MELT ramps to the 15% unit rate, and the 2026 commercial build is already in the cost base [C10, C13, C14, S15, S21, S23].** FY2027E cash operating expenses are $291 [C14]. About $20 of that is incremental TYRVAYA cost [G5, S20]. An assumed G-MELT pre-launch program adds $12 [S17]. An assumed YOCHIL program adds $6 [S33]. A 4% variable load on same-store revenue above the third-quarter 2026 annualized pace of $397 adds $6.4, because the third-quarter cost run rate already pays for that pace [C14, C17, S41]. Cash opex then rises to $388 by FY2032E [C14]. GAAP gross margin is 73–76% in the outer years, using a 40% central Samsung share on the biosimilars and a Catalent royalty comparator on G-MELT and YOCHIL, not a flat 75% [S18, S19, C13]. The 53.9% margin is well beyond the 20.2% and 22.7% Adjusted EBITDA margins reported for FY2024A and FY2025A, and beyond any margin management has described [A3, G1, G23, C14]. We flag that gap, show the cost bridge in Figure 6a, and name operating leverage as a bear lever rather than capping the base [C14, S42]. Melt FDA-approval cash of $87.2 would be a cash outflow around a Q4 2027 PDUFA [A9, A6]. Combined Melt sales first exceed $100 of Annual Net Sales in FY2030E, which would trigger $10.0 of commercial cash, still not an Adjusted EBITDA deduction [A18, S12, S34].

The bull case finishes above the $350 FY2026E low end, is not plugged to the $365 high end, and includes an 8% VEVYE coverage increment above the held fourth-quarter exit plus a faster G-MELT ramp and a faster YOCHIL penetration that can hit $100 of Annual Net Sales in FY2029E and $250 in FY2032E; the build is in Appendix A. The bear case misses the $350 low end on a weaker fourth-quarter mix, no IHEEZO year-end recognition, and earlier fading of net adds, with a G-MELT approval delayed past 2030, no YOCHIL revenue in the window, tighter Samsung and royalty takes, and a named operating-leverage lever of faster cost inflation and a higher variable cost rate; that build is also in Appendix A. The valuation in Section 9 puts the base case at $132.69 per share vs. a $29.37 share price, with the bull at $153.28 and the bear at $14.71 [C25, A24]. Figure 1 shows that revenue and Adjusted EBITDA both use the bottom-up view as the base in every explicit year.

Figure 2 – Financial summary (FY2024A–FY2028E, US$ millions)

The table is the base case through FY2028E. Revenue growth in FY2027E is the first full year of TYRVAYA plus continued net unit additions in VEVYE, IHEEZO, and TRIESENCE.

	FY2024A	FY2025A	FY2026E	FY2027E	FY2028E
Revenue	200	272	348	613	803
Revenue growth	—	36.4%	27.8%	76.0%	31.1%
GAAP gross margin	75.0%	75.0%	72.1%	72.5%	73.8%
Adjusted EBITDA	40.3	61.9	43.3	177	298
EBITDA growth	—	53.6%	-30.1%	309.3%	68.1%
EBITDA margin	20.2%	22.7%	12.4%	28.9%	37.1%

Source: FY2024A–FY2025A [A1][A3]; FY2026E–FY2028E [C1][C5][C10][C13][C14]. Totals of $100 and above are whole numbers; exact figures are in forecast.json and Appendix B. May not sum due to rounding.

Figure 2 (continued) – Financial summary (FY2029E–FY2032E, US$ millions)

The outer years add the 15% G-MELT unit ramp, the YOCHIL memo line, and the same constant net-add rules on VEVYE, IHEEZO, and TRIESENCE, with cash opex still growing more slowly than revenue.

	FY2029E	FY2030E	FY2031E	FY2032E
Revenue	1,020	1,250	1,483	1,661
Revenue growth	26.9%	22.6%	18.7%	12.0%
GAAP gross margin	74.5%	75.0%	75.4%	75.8%
Adjusted EBITDA	454	614	775	896
EBITDA growth	52.5%	35.1%	26.3%	15.6%
EBITDA margin	44.6%	49.1%	52.2%	53.9%

Source: [C10][C13][C14][C17][S15][S19][S20][S40][S41]. Whole numbers at $100 and above. May not sum due to rounding.

3. Business Description and Reporting Lines

Harrow is a North American ophthalmic company that sells FDA-approved branded products and compounded formulations [D2]. It reports two segments, Branded and ImprimisRx (compounding), and, beginning in the 2026 quarterly reports, product revenue for VEVYE, IHEEZO, TRIESENCE, Other branded products (which excludes those three), Other revenues, and Compounding [A1, A2]. All operations are attributed to the United States [D2]. The company commercializes products it owns or licenses; it does not manufacture its branded finished goods, which are made by contract manufacturers [D2].

Figure 3 – FY2025A revenue by line (US$ millions)

VEVYE, IHEEZO, and compounding each accounted for about 30% of FY2025A revenue. TRIESENCE was still inside the 10-K Other branded total and is split out here to match the 2026 presentation.

Line	FY2025A	Share of total
VEVYE	88.7	32.6%
IHEEZO	81.3	29.9%
TRIESENCE (split from Other branded)	9.9	3.6%
Other branded products (ex-TRIESENCE)	15.4	5.7%
Other revenues	0.4	0.1%
ImprimisRx (compounding)	76.5	28.1%
G-MELT	0.0	0.0%
Total	**272**	**100%**

Source: 2025 Form 10-K product table [A1]; TRIESENCE $9.9 split [C6]. Shares are derived. May not sum due to rounding. G-MELT had no commercial revenue [A7].

VEVYE is a pharmacy-benefit, water-free cyclosporine 0.1% for dry eye disease [D2]. IHEEZO is a buy-and-bill chloroprocaine ophthalmic gel for ocular surface anesthesia; Harrow revenue is recognized on shipment to distributors, and “customer unit demand” is distributor shipments to practices [D2, S2]. TRIESENCE is a buy-and-bill triamcinolone injectable with U.S. patents listed as expiring in March and December 2029 [D2, S14]. Other branded is the residual FDA-approved book and, from mid-2026 and October 2026, the reporting bucket for BYOOVIZ and TYRVAYA; it is also the natural bucket for OPUVIZ and BYQLOVI if they are not broken out [A2, S4, S7]. ImprimisRx is the 503A / 503B compounding business, including compounded MKO Melt, which the company says is already used at more than 800 U.S. ophthalmic institutions [G17].

Samsung share on BYOOVIZ and OPUVIZ

Under the Samsung Bioepis agreement, Samsung develops, manufactures, and supplies BYOOVIZ and OPUVIZ, and Harrow commercializes them in the United States [A8, G10]. Samsung is owed a “share of net sales” at an undisclosed rate, plus one-off net-sales milestones [A8]. We treat the dollars as Harrow-recognized product sales inside Other branded [S7]. We assume a 40% share plus about 8% other product cost, which implies a 52% product gross margin [S18]. The base case includes those product dollars and that take. The rate is not disclosed [A8]. A 30% share would imply about 62% product gross margin, and a 50% share about 42% [S18].

TYRVAYA milestones

TYRVAYA closed on 1 October 2026 for $30 cash plus up to $70 of milestones in periods ending 31 December 2029 [G14, D9]. Rights are worldwide except Japan, where Viatris pays Harrow tiered royalties at undisclosed rates [G14]. The first sales milestone is not expected on anticipated 2027 revenue, and no milestone liability was recorded in the Q3 2026 Form

10-Q [G5, A10]. The base includes TYRVAYA product sales inside Other branded and does not include a 2027 sales-milestone cash outflow [S6, S12]. The $30 close cash was paid on 1 October 2026 from cash on hand, after the 31 December 2025 balance sheet that sets the valuation's opening cash, so it is on the cash schedule the valuation discounts [A23, C19]. The up to $70 of milestones is not on that schedule, because the company does not expect the first net-sales milestone on its anticipated 2027 revenue [G5, C19].

Melt contingent cash and stock

The remaining Melt equity was acquired in November 2025 [A7, D8]. Schedule A of the Melt Milestone Payment Agreement still provides for FDA-approval cash of $87.2, payable to non-Harrow former holders within 75 days of achievement [A9]. A separate CMS pass-through and J-code stock milestone is $47.9 at a contractual $43.13 per share, or about 1.11 million fixed shares [A9, C7]. Commercial cash milestones total $260 and are triggered at Annual Net Sales of $100 / $250 / $500 / $750 / $1,000 [A9, C8]. The base does not deduct these amounts from Adjusted EBITDA [S12]. The $87.2 approval payment is a funding-risk flag around a Q4 2027 PDUFA, and the valuation discounts it with the other scheduled cash items [S12, A6, C25]. Combined G-MELT and YOCHIL sales in the base first exceed $100 of Annual Net Sales in FY2030E, so the first commercial cash milestone of $10.0 is recorded on the forecast-file cash-share schedule at 31 December 2030, payable within 75 days after year-end; it is still not an Adjusted EBITDA item [C12, C16, A18, S34, S12]. A second FDA-approval cash payment is not added for YOCHIL [S25]. The CMS J-code stock milestone remains undated and is omitted from the schedule [S12].

Products still in development

G-MELT (MELT-300) is an investigational Zydis orally disintegrating tablet of midazolam 3 mg plus ketamine 50 mg [G17, G18]. The company plans to file an NDA by year-end 2026, with PDUFA in Q4 2027 if review is standard, and a 2028 launch if approved [G7, G8, G18]. The explicit years include G-MELT from mid-2028 on the volume path in the Drivers section, labelled unweighted and conditional [S15]. YOCHIL (MELT-210) is a 3 mg midazolam Zydis orally disintegrating tablet intended for sedation, anxiolysis and amnesia before diagnostic, therapeutic or endoscopic procedures or before induction of anesthesia [G25]. It is not the midazolam-plus-ketamine cataract combo [G17, G25]. End-of-Phase 2 was completed in the quarter ended 30 June 2026 [G24]. Phase 3 is still ahead, and there is no NDA in 2026 [G24, S32]. The November 2026 deck shows YOCHIL as expected in 2028, sitting with G-MELT on the Surgical team [G19, G23]. The explicit years include YOCHIL from 2028 on a unit path tied to one-third of IHEEZO customer units, also labelled unweighted and conditional, with a clear flag that a 2028 launch is tighter than G-MELT's [S32, P4]. H-N08, a next-generation TRIESENCE pre-filled syringe, is expected in the second half of 2028 or the first half of 2029, is unapproved, and is not in the base as a replacement product [S23]. QUELL has been completed as IHEEZO-related development work and is not a separate revenue line [G15]. No dollar figure was given for H-N08 or QUELL in the sources used here.

4. Management

Mark L. Baum is a founder, Chairman of the Board, and Chief Executive Officer [A14]. In 2011 he led the restructuring and reorganization of the company, was appointed a director in December 2011, Chief Executive Officer in April 2012, and Chairman again from August 2021 [A14]. He is a graduate, cum laude, of The University of Texas at Arlington and a graduate of California Western School of Law [A14]. In 1999 he founded YesRx, an HIV-focused pharmacy business; before Harrow, as founder of TBLF, LLC, he made investments in, and provided advisory and board service to, private and public companies [A14]. As of 21 April 2026 he beneficially owned 3,663,630 shares, or 9.65% of 37,273,420 shares then outstanding [A13]. A Form 4 filed for a 14 May 2026 open-market purchase reported 2,996,130 shares held directly after buying 10,000 shares, which implies that the April beneficial total included additional indirectly or derivatively attributable shares as footnoted in the 24 April 2026 definitive proxy; we do not restate an option count that we have not quoted [A13].

Andrew R. Boll is President and Chief Financial Officer and was part of the 2012 reorganization [D2]. The current commercial platform has been built largely by acquisition and licensing — IHEEZO, VEVYE, TRIESENCE, the Melt remaining interest in November 2025, the Samsung U.S. rights in 2025, and TYRVAYA in October 2026 [D2, D8, D9, D12]. That deal record is substantial. The execution record on annual targets is mixed. The original FY2025 revenue guide was a single point of more than $280 [A3]. Actual revenue was $272 after the range was revised to $270–280 [A3]. The original FY2026 Adjusted EBITDA range of $80–100 was cut in November 2026 to a floor of more than $40 [G1, G4]. As of 5 November 2026 the company had 37,533,160 common shares outstanding and $300 principal amount of 8.625% senior notes due 2030 [A6].

5. Key Developments

The table lists the dated events that set the current commercial book, the Melt and TYRVAYA contracts, and the November 2026 guidance.

Figure 4 – Recent events

Date	Event	Why it matters
17 Jul 2025	Exclusive U.S. commercial rights to BYOOVIZ and OPUVIZ with Samsung Bioepis [D12][D13][A8]	Harrow commercializes; Samsung develops, makes, and supplies. Upfront $4 paid February 2026 and capitalized. A “share of net sales” and one-off net-sales milestones are payable at undisclosed rates [A8][S7][S18].
17–18 Nov 2025	Remaining Melt equity acquired as an asset acquisition [A7][D8][D17]	Harrow already owned about 45–46%. $8.45 of in-process R&D was expensed in FY2025. A mid-single-digit royalty formerly payable to Harrow is now internalized [A7]. Contingent cash and stock remain payable to non-Harrow holders [A9][S12]. The then-current plan was an H1 2027 NDA, H1 2028 approval, and H2 2028 launch; that calendar has since been accelerated [D17][G9].
2 Mar 2026	FY2025 results and original FY2026 guidance [D4][G4]	Revenue $272, Adjusted EBITDA $61.9. Original FY2026 guide: revenue $350–365 (first half $133–153) and Adjusted EBITDA $80–100.
31 Mar 2026	IHEEZO Medicare pass-through expected to expire [D2]	Context for 2026 IHEEZO realization; not a new Q4 2026 event.
24 Apr 2026	2026 definitive proxy filed; beneficial ownership as of 21 April 2026 [D16][A13]	Baum beneficially owned 9.65%.
1 Jul 2026	BYOOVIZ U.S. launch [G11]	Sales are unprinted in the Q3 10-Q. Q3 was below the company’s model, with more accounts and small trials [G11].
10 Aug 2026	Q2 2026 stockholder letter: YOCHIL End-of-Phase 2 meeting completed [G24][D20]	Phase 3 design is being refined; a 2028 launch remains expected and is tighter than G-MELT’s, because Phase 3 is still ahead [G24][G19][S32].
1 Oct 2026	TYRVAYA close: $30 cash, up to $70 milestones through 31 Dec 2029, worldwide except Japan [D9][G14]	First contribution is in Q4 2026E. Incremental annual opex about $20. Novaliq consent remains outstanding [G5][G6].
1 Nov 2026	HarrowRx launched; four commercial teams (OSD, Retina, Surgical, Access+) [G13]	Surgical is the team that will carry G-MELT upon approval [G20][G23].
9–10 Nov 2026	Q3 results, letter, deck, and call [D1][D3][D14][D15]	Q3 revenue $99.3, nine-month revenue $214, nine-month Adjusted EBITDA $7.3. Revenue range reaffirmed; Adjusted EBITDA cut to more than $40, including more than $33 in Q4 [G1][G2]. Pre-NDA meeting complete; G-MELT NDA planned by year-end 2026; PDUFA Q4 2027 assuming standard review; 2028 launch is conditional [G7][G8][G9][G18].

Source: dates and facts as tagged in the table [D1]–[D17][A7][A8][A9][A13][G1][G2][G4][G5][G7][G8][G9][G11][G13][G14][G18][G20].

The events that change the numbers are the TYRVAYA close, the November cut to the Adjusted EBITDA outlook, the still-unresolved Novaliq consent, the partly disclosed Samsung economics, and the accelerated G-MELT filing calendar that now supports a 2028 launch in the base if the product is approved [G1, G5, G6, S7, S15, A6]. There is no dated delay mechanism in the latest sources that would push a standard-review Q4 2027 PDUFA into a missed 2028 launch [G7, G8, S8, S15].

6. Business Drivers by Line

VEVYE

The cause of the volume path is the recent net addition of reconstructed prescriptions, which we hold constant rather than convert into a percentage growth rate [S21, P2]. The last two quarterly increments were 50,051 and 49,026, an average of 49,538.5 [S21]. That is a stock-flow proxy, not a prescriber cohort [S21]. Steady net additions are a judgment, not a finding of saturation [S21].

The September business-rule change and the already-rising 2026 mix are the cause of the fourth-quarter net-price assumption [S1, A12]. We hold a +10% sequential step from the Q3 derived ratio of $117.66 per TRx, and we hold that $129.42 exit in FY2027E–FY2032E [S1, S21]. A 1 January 2027 coverage win is real commentary [G16]. It is not sized in the base, because covered-share economics are not disclosed [S21]. It is an 8% bull-case increment above that exit, not a base-case rate [S21].

Q3 2026 revenue was $39.7, up 35% sequentially and 75% year over year [A12]. Q4 2026E is $50.1 on 386,954 reconstructed TRx [S1, C1]. TRx from Q3 2025 onward is reconstructed, not independently measured [S1, S21]. Revenue per prescription is a derived ratio, not a measured average selling price [S1, S21]. FY2026E is $140 [C1].

FY2027E is $264 and FY2028E is $367, at the held $129.42 per TRx [S21]. Those dollars are the output of the constant add: FY2027E TRx is about 63% above FY2026E, then about 39% in FY2028E [S21]. Later years continue the same add, taking the line to $470, $572, $675, and $777 in FY2029E–FY2032E, with percentage growth decelerating to about 15% by FY2032E [S21]. Composition-patent expiry from December 2030 is a later-window risk [D2, S21]. Other listed claims run into 2037–2039 [D2]. The unit and price arithmetic is in Appendix B under S21.

IHEEZO

The cause of the unit path is the latest Q3 year-over-year unit add of 10,665, allocated with 2025 seasonal weights [S22, P2]. That add implies a constant 41,804 units a year from a cleaned 2026 four-quarter rate of 243,849 [S22]. Q2 2026 stocking is in FY2026E shipments and is not carried into the forward run rate [S22].

The cause of the Q4 2026E dollar figure is that unit path plus the 2024 year-end recognition uplift [S2]. Q4 demand is 75,811 customer units [S2]. Q4 dollars use the Q3 2026 realization of $406.64 per customer unit times the 2024 lift of 1.242, not the 2025 lift of 1.344 [S2]. Realization is revenue per customer unit, not a true average selling price [S2]. 2026 is the first year-end without pass-through, which is why the milder 2024 factor is used [S2, D2].

The first nine months of 2026 were slightly below the prior-year nine months [A2]. Q4 2026E is $38.3 [S2]. FY2026E is $81.1, essentially unchanged from FY2025A $81.3, on about 249,000 reported units [C1, A1, S22].

FY2027E is $116 and FY2028E is $133, at the Q3-like $406.64 per customer unit, with no net full-year inventory build [S22]. Those years are 285,654 and 327,458 units [S22]. The same annual add continues, taking the line to $150, $167, $184, and $201 in FY2029E–FY2032E [S22]. Percentage growth decelerates as the base rises [S22]. Patents are listed into 2038–39 [D2]. Temporary Medicare pass-through was expected to expire on 31 March 2026 [D2].

TRIESENCE

TRIESENCE was relaunched into a market that had been undersupplied and is still ramping, which is the cause of the steep near-term unit growth [A2]. The volume path holds the average of the last two deck increments, 4,669 and 5,419, or 5,044 customer units a quarter [S23, P2]. Steady net additions are a judgment, not a finding of saturation [S23]. Realization is held at the Q3 2026 ratio of $534.76 per customer unit [S3].

Q3 2026 revenue was $10.7 and nine-month revenue $20.1 [A2]. Q4 2026E is $13.4, on 25,066 units [S3, C1]. FY2026E is $33.5, on 69,625 units [C1, S23]. Q1 and Q2 2026 dollars were not printed [A2]. The quarterly grid allocates first-half 2026 TRIESENCE of $9.4 using later-printed units at an equal realization, and is flagged as derived [A2].

FY2027E is $80.6 and FY2028E is $124, at the same $534.76 per customer unit [S23]. Those years are 150,704 and 231,408 units [S23]. The same add continues, taking the line to $167, $210, $253, and $296 in FY2029E–FY2032E, with percentage growth decelerating as the base rises [S23]. U.S. Orange Book patents are listed through 2029 [S14, S23]. They are a named bear lever and are not used to invent a base-case fade [S14, S23]. H-N08 is unapproved and is not in the base [S23].

TYRVAYA

The cause is the 1 October 2026 close, which brought worldwide rights except Japan into Harrow’s dry-eye book [G14, D9]. The company expects TYRVAYA to contribute more than $30 of revenue in 2027 [G5]. It also expects about $20 of incremental annual operating expenses [G5]. Our FY2027E figure is $33, just above that floor, and FY2028E is $36 [S6]. Later years are $38, $40, $42, and $43 [S6]. Those dollars sit inside Other branded and are counted once [S6, S13]. The $20 of incremental opex is included once from FY2027E [G5, S20, C14]. A $5 partial-quarter allowance is already in Q4 2026E [S20]. Novaliq has not yet agreed that its restriction on other prescription dry-eye products does not apply to TYRVAYA [G6]. We treat that consent as a named bear lever, not as a silent haircut to the base [S6]. Product gross margin before amortization and inventory step-up is assumed at 79% [S19]. Japan royalties from Viatris are at unknown rates and are not separately forecast [G14].

BYOOVIZ and OPUVIZ

BYOOVIZ launched in the United States on 1 July 2026 [G11]. OPUVIZ is planned for a mid-2027 U.S. launch [G12]. Those launches are the cause of the biosimilar contribution inside Other branded. Q3 BYOOVIZ revenue was below the company’s model, with more accounts and small trials [G11]. It is not printed as a standalone figure [G11]. Q3 2026 Other revenues were only $0.2, so the biosimilars are not being booked there [A2, S7].

FY2026E BYOOVIZ is $6.9, equal to an illustrative Q3 $2.92 plus Q4 $4.0 [S4]. The $2.92 Q3 figure is not independently measured; it is the residual under a flat-legacy hypothesis and is flagged with an asterisk in the quarterly grid [S4]. OPUVIZ contributes $0 in FY2026E, $2 in FY2027E, then $8, $14, $18, $20, and $22 [S13]. BYOOVIZ is $18, $22, $26, $28, $30, and $31 in FY2027E–FY2032E [S13]. Those components, together with TYRVAYA, BYQLOVI, and legacy, sum to Other branded in every year [S13]. The Samsung economic assumption is in the Business Description section [S18].

Melt (G-MELT / MELT-300)

The pre-NDA meeting is complete, and the company plans to submit the NDA by year-end 2026 [G9, G7]. That is an acceleration from the first-half 2027 plan at close, which is the cause of a 2028 launch in the base if the product is approved [D17, G9]. The LOUISE Phase 3 trial, conducted under a Special Protocol Assessment, was reported as P=0.009 versus midazolam and P=0.0001 versus placebo [G9]. The November 2026 corporate presentation times PDUFA in Q4 2027 assuming standard review [G7, G18]. It shows a 2028 launch that is conditional on approval [G8, G19]. If approved, the letter and the deck describe G-MELT as the only on-label product for sedation during cataract surgery [G18, G20]. The base indication is that anticipated label. We do not assert a broader approved use [S15]. We do not put the 100 million-plus short-duration procedure opportunity into the base [G18, S15].

Competitive alternatives today are IV midazolam and opioids in the procedure room, and compounded MKO already paid by facilities out of capitated cataract-surgery fees [G22, G20]. The 2022 stockholder letter said customers pay for compounded MKO out of those fees [G22]. It also said that more than 400,000 MKO troches had been dispensed by late 2022 [G22]. The September 2025 Melt acquisition announcement said the product had been used in over 500,000 cataract surgeries over more than a decade [G26]. Those are cumulative counts, not an annual share of the 5 million-plus U.S. cataract surgeries [G22, G26, G18]. Current annual compounded MKO volume is not disclosed [S15]. We treat the more than 800 institutions as the early-adopter base, not as a measured annual unit count [G17, S15]. There is no dated delay mechanism in the latest sources that would cause a 2028 launch, if approved on the Q4 2027 standard-review clock, to be missed [G7, G8, S15]. The bear case is approval delay or non-approval [S8, S15].

We assume 60,000 units in FY2028E, then 250,000, 500,000, 750,000, and 750,000 units in FY2029E–FY2032E, at $175, $180, $185, $190, and $195 per unit [S15, P4]. The launch year is a two-quarter stub, not 15% in year one; later years are one-third, two-thirds, and then the full 750,000 mature rate, held in FY2032E [S15]. Net realization is a mid assumption between bundled, capitated facility-paid economics and a possible later separate-reimbursement outcome [S15, G22]. Pass-through and a J-code are a contingent stock milestone and are not assumed as a base-case price path [A9, S12]. Revenue is $10.5, $45.0, $92.5, $142.5, and $146.25 [C12]. The 750,000 unit rate from FY2031E is 15% of the 5 million U.S. cataract surgeries used as the floor of the company's 5 million-plus initial target, per the 11 November 2026 instruction that an FDA-approved product should exceed a 10% compounded reference [P4, G18, S15]. A 10% current annual MKO share of U.S. cataract surgeries is not a verified printed figure in the sources used [G22, G26]. Printed figures are cumulative: more than 400,000 troches by late 2022, and later "over 500,000 cataract surgeries" over more than a decade, plus an 800-institution early-adopter base [G22, G26, G17]. Current annual MKO volume is undisclosed [S15]. Combined with YOCHIL, FY2030E Melt sales of $109 exceed the $100 Annual Net Sales threshold; the $146 FY2032E G-MELT figure is the product of this volume and price path, not a cap [C12, S12, S34].

No G-MELT launch budget has been disclosed [S17]. We book an assumed program of $12 in FY2027E, $20 in the FY2028E launch year, and $16–19 in-market in FY2029E–FY2032E [S17]. Bands are roughly 40% either side [S17]. FY2026E already includes a $4 filing allowance in the fourth quarter [S10]. Product gross margin is 72%, in a 65–78% band [S16, S19]. That uses a 7% Catalent Zydis royalty comparator, about 15% manufacturing, and about 6% distribution [S16]. The Surgical team, already expanded, is the team that will carry the product [G19, G20, G23]. Compounding is held flatter from FY2028E to allow some site conversion from compounded MKO [S13]. The conversion is not one-for-one [S13]. The compounding path is not cut further for the higher 15% G-MELT share, because current annual MKO volume is undisclosed and a one-for-one offset cannot be measured [S13, P4]. Cash and cash equivalents were $75.3 at 30 September 2026, after which $30 was paid to close TYRVAYA [A6, G14]. Operating free cash flow after that payment has not been independently verified [S12]. The $87.2 approval payment remains a funding-risk flag, and the valuation discounts it with the other scheduled cash items [S12, C25].

YOCHIL (MELT-210)

YOCHIL is a 3 mg midazolam Zydis orally disintegrating tablet for sedation, anxiolysis and amnesia before diagnostic, therapeutic or endoscopic procedures or before induction of anesthesia [G25]. It is not the midazolam-plus-ketamine cataract combo [G17, G25]. Both products are shown as expected in 2028 and both sit with the Surgical team [G19, G23]. YOCHIL is earlier in development: End-of-Phase 2 was completed in the quarter ended 30 June 2026, Phase 3 is still ahead, and there is no NDA this year [G24, S32]. First revenue follows the company's 2028 expected timing, unweighted and conditional, with a clear flag that a 2028 launch is tighter than G-MELT's [G19, S32].

Units equal penetration times one-third of that year's IHEEZO customer units [S32, P4]. The official IHEEZO unit identity is 327,457 in FY2028E, then 369,261, 411,065, 452,869, and 494,673, which is a constant annual add of 41,804 and is not changed here [S22]. Penetration uses the same fractions as the G-MELT ramp: 60/750 in FY2028E, then one-third, two-thirds, and full capture from FY2031E, after which units track IHEEZO [S32, P4]. That is 8,732, 41,029, 91,348, 150,956, and 164,891 units [C16]. Assumed net price follows the G-MELT path of $175 to $195 per unit, because no YOCHIL price is disclosed [S32]. Revenue is $1.53, $7.39, $16.9, $28.7, and $32.2 [C16]. Product gross margin is 72%, on the same Catalent

comparator and 65–78% band; no disclosed reason to differ was found [S16, S19]. YOCHIL is not placed on the cataract 15% target, and G-MELT is not given the IHEEZO third [P4]. Compounded MKO remains in ImprimisRx and is not double-counted [P3]. The broader diagnostic, endoscopic and anesthesia-induction market stays out of the base [S32].

An assumed modest program of $6.0, $10.0, $8.0, $8.5, $9.0, and $9.5 in FY2027E–FY2032E sits on the existing Surgical team [S33]. It is not zero and is not a second sales force [S33]. The band is about 40% either side [S33]. No incremental 2026 YOCHIL cost is added, because the fourth quarter already includes a $4 G-MELT filing allowance and accelerated R&D that already names YOCHIL [S10, G15, S33].

Other legacy branded products and compounding

BYQLOVI was approved in May 2026 and is a small early contribution inside Other branded ($0.3 in FY2026E, rising to $8.5 by FY2032E) [S13]. Legacy products are $19.7 in FY2026E and about $23–25.5 a year thereafter [S13]. Q4 2026E rest of Other branded is $11.0, including TYRVAYA, on a rounded $15.0 Other branded total after a separate $4.0 BYOOVIZ row [S4]. ImprimisRx is $60.9 in FY2026E and $72 in FY2027E–FY2029E, then $73, $75, and $77 [S5, S13]. That modest path does not re-accelerate compounded MKO as if it were incremental branded G-MELT, and it is not cut further for the higher 15% G-MELT share [P3, S13, P4]. Other revenues stay at $0.5 [S5].

7. Risks

Novaliq consent is the largest identifiable single-product downside in 2027. If discussions with the VEVYE licensor require a U.S. and Canadian divestiture, a termination, or modified terms, the $33 FY2027E TYRVAYA contribution and part of the $20 opex add-on would not hold [G6, S6]. Where the bear is that outcome, the build is in Appendix A.

An undisclosed Samsung share of net sales can either reduce Harrow revenue or compress gross margin [A8, S18]. Net-sales milestones are also undisclosed [A8, S7]. A 50% share would take biosimilar product gross margin to about 42% [S18]. On FY2032E BYOOVIZ plus OPUVIZ of $53, that would cut about $5 of gross profit versus the base [S18]. Competitive anti-VEGF pricing can also cap realized price independently of the contract [S7].

A complete response, a delayed G-MELT filing, or a failed reimbursement path would push the $10.5–146 FY2028E–FY2032E G-MELT path out of the window or into later years, which is the bear case [S15, S8]. A narrower label, a boxed warning, or REMS-like conditions would also change the volume path [G18, G20]. YOCHIL's 2028 launch is tighter because Phase 3 is still ahead; the bear gives it no revenue in the explicit window [S32, S8]. H-N08 and the other unlaunched pipeline products remain out of the base [S23]. Melt approval cash of $87.2 would still be a cash use if approval occurs, and funding has not been verified [A9, S12]. Combined Melt sales in the base first exceed $100 of Annual Net Sales in FY2030E, which would add $10.0 of commercial cash, still outside EBITDA [A18, S34].

Q3 branded margin was already 79.3%, not a consolidated "high 70s" [A5]. Management cut the EBITDA outlook after lower-than-expected margins all year [G1, G15]. An unnamed product hit a royalty-tier step-up [G15]. Inventory step-up is not an Adjusted EBITDA add-back [S11]. The Catalent and Samsung rates are assumed, not disclosed [S16, S18]. G-MELT and YOCHIL program spend is assumed, with a roughly 40% band either side [S17, S33]. FY2032E Adjusted EBITDA margin of 53.9% would be lower if those bands land on the high-cost side, or if net adds fade sooner than the base [C14, S17, S33, S21, S23]. That margin is far above the reported history, so operating leverage is a named bear lever: 5% core cost inflation and an 8% variable rate take about $24.6 off bear FY2032E Adjusted EBITDA (derived), and the build is in Appendix A [S42, C22].

The VEVYE and TRIESENCE paths assume that recent net unit additions persist through FY2032E, which is a judgment [S21, S23]. A sooner fade of those adds is a bear lever; the build is in Appendix A. Listed U.S. TRIESENCE patents expire in 2029 [S14, S23]. IHEEZO pass-through expiry in March 2026 is a reminder that Medicare packaging and average-selling-price inflation rebates can change buy-and-bill economics [D2].

Compounded products are not FDA-approved. The California license surrender is a concrete example of state-level restriction [D2]. Further state actions, FDA 503B observations, or a larger-than-assumed shift of MKO users to branded G-MELT would change the compounding path [P3, S13].

Coverage, prior authorization, and patient out-of-pocket costs drive VEVYE and TYRVAYA; Medicare Part B reimbursement drives IHEEZO, TRIESENCE, and the biosimilars [D2]. Inflation Reduction Act inflation rebates, 340B, and discarded-drug refunds apply to Part B products [D2]. Contract-manufacturer concentration and starting-material supply are named 10-K risks [D2]. Leverage is real: $300 of 8.625% notes due 2030 sit against $75.3 of cash at 30 September [A6]. After that date, $30 was paid for TYRVAYA [G14]. Melt approval cash of $87.2 could also come due around PDUFA [S12]. The valuation adds a year-0 equity raise of $50 in the base, because opening cash after the scheduled payments would otherwise be negative; it is a modelling rule, not an announced offering [C21, P6].

8. Forecast

How the evidence becomes the numbers

The company totals in this report are the sum of the product lines [P1]. Figure 1 shows how those totals sit against the published outlook [C1, C5]. There is no current Consensus and no calibrated view [P1]. The reaffirmed $350–365 range is used as a check on the product build, not as a target the lines are scaled to [P1]. First-half 2026 revenue was $115, below the original first-half range of $133–153 [G4, C3]. That miss is not applied to the reaffirmed full-year range [G2, C3]. The FY2026E revenue figure of $348 sits about $2 below the $350 low end [C1, C15]. The FY2026E Adjusted EBITDA figure of $43.3 sits above the floor of more than $40 [G1, C5].

A $2.5 TYRVAYA inventory step-up in Q4 2026E is not added back [S11]. The letter definition of Adjusted EBITDA does not list inventory step-up as an add-back [A4]. Melt closing in-process R&D of $8.45 was expensed in FY2025 and does not recur [A7]. Integration and transition costs tied to TYRVAYA are represented by the verified about $20 of incremental annual opex from FY2027E [G5, S20]. A $5 partial-quarter allowance is in Q4 2026E [S20]. The explicit window runs through FY2032E and includes G-MELT and YOCHIL year by year from 2028 if approved [P1, S15, S32]. G-MELT and YOCHIL launch inside the explicit window, so their FY2033E dollars sit inside the next-year build that sets next-period growth (gsnext) of 10.7% [S44]. The pipeline was considered for the incremental margin (mc) and did not move it, because their 72% product gross margin sits close to the FY2032E mix [S43, S16]. Both judgments rest on the history window: GAAP gross margin was 75% in FY2024A and FY2025A and 71% in the first nine months of 2026 [S43, A3, A5].

Figure 5 – Evidence → assumption → forecast impact

Each row maps a development or driver to the base-case assumption it sets and to the effect on the base-case numbers.

Evidence	Assumption	Forecast impact
Reaffirmed $350–365 revenue range; nine-month revenue $214 [G2][A2]	Fourth-quarter product build; the range is a check [P1]	FY2026E $348, about $2 below the low end [C1][C15]
Last two reconstructed VEVYE TRx increments of 50,051 and 49,026 [S21]	Constant quarterly add of 49,538.5 TRx; Q4 net price $129.42 per TRx held [S21][S1]	VEVYE $50.1, then $140, $264, $367; $777 by FY2032E [S21]
IHEEZO Q3 2026 unit add of 10,665 and 2024 Q4 recognition lift [S22][S2]	Annual add 41,804 on 2025 weights; Q4 dollars at $406.64 × 1.242; later years at $406.64 [S22]	IHEEZO $38.3, then $81.1, $116, $133; $201 by FY2032E [S22]
TRIESENCE last two increments of 4,669 and 5,419 [S23]	Constant quarterly add of 5,044 units at $534.76 per customer unit [S23]	$13.4, then $33.5, $80.6, $124; $296 by FY2032E [S23]
TYRVAYA 2027 floor of more than $30, and about $20 opex [G5]	$33 FY2027E product sales; $20 opex once [S6][S20]	Inside Other branded; opex not double-counted [S13][C14]
Samsung share undisclosed [A8]	Gross product sales; 40% share plus about 8% other cost [S18]	BYOOVIZ and OPUVIZ in Other branded at a 52% product gross margin [S7][C13]
G-MELT NDA year-end 2026, PDUFA Q4 2027, 2028 launch if approved [G7][G8][G18]; 15% instruction [P4]	Mid-2028 first shipments, unweighted and conditional; 60,000–750,000 units at $175–$195 per unit, 15% of 5 million by FY2031E [S15][P4]	$10.5–146 in FY2028E–FY2032E; $0 in the bear case through FY2030E [C12]
YOCHIL End-of-Phase 2 in Q2 2026; expected 2028 [G24][G19]	Penetration × (1/3) × IHEEZO units; same fractions as the G-MELT ramp; $175–$195 assumed [S32][P4]	$1.53–32.2 in FY2028E–FY2032E; $0 in the bear case [C16]
No disclosed G-MELT or YOCHIL launch budget; “existing footprint” [G19][S17]	G-MELT program $12 / $20 / $16–19 and YOCHIL $6 / $10 / $8–9.5, about 40% either side; not zero [S17][S33]	Cash opex $291 in FY2027E rising to $388 [C14]
Q3 2026 cash opex of $59.3 already pays for the Q3 revenue pace [C4][C17]	Core = Q3 run rate × 4, then 4% a year (BLS-based); variable 4% of same-store revenue above the Q3 annualized $397 [S40][S41][C17]	Variable opex $6.4 in FY2027E rising to $39.2; Adj. EBITDA about $2.5 a year higher than measuring from FY2026E [C14]
Melt approval cash $87.2 [A9]	Contingent cash, not EBITDA; funding not verified [S12]	Flagged around PDUFA; discounted on the valuation's cash schedule [S12][C25]

Source: tags in the table. Full precision is in forecast.json and Appendix B.

Base case

From FY2027E the total is the sum of the lines, including the G-MELT and YOCHIL memo lines [C10, P3, P4]. GAAP gross margin from FY2027E is weighted product gross profit minus amortization, divided by revenue [C13, S19]. Adjusted EBITDA from FY2027E is product gross profit minus cash opex [C13, C14]. The 2026 commercial expansion is already in the Q3 cash-opex run rate [S20]. Q3 selling, general and administrative expense was $53.1 versus $35.9 a year earlier [G15]. The ocular-surface team more than doubled, and the Surgical team was described as three times larger [G23]. FY2032E Adjusted EBITDA margin of 53.9% is that fully costed central result applied to the constant-add product paths and the 15% G-MELT / YOCHIL memo lines [C14].

That later-year margin sits well beyond the history. Reported Adjusted EBITDA margins were 20.2% in FY2024A and 22.7% in FY2025A, and our FY2026E is 12.4% [A3, C5]. Management has described no margin beyond the FY2026 floor of more than $40 [G1]. The November 2026 deck says the cost structure lets revenue grow faster than operating expenses over time, which is direction, not a margin figure [G23]. The base margin reaches 53.9% because revenue grows about 2.7 times from FY2027E to FY2032E while cash opex grows about a third (derived) [C14, C23]. We do not cap or haircut the base for being high. Figure 6a shows the bridge, and the bear carries operating leverage as a named lever (Appendix A) [S42].

Figure 6 – Base case by line (FY2024A–FY2028E, US$ millions)

The table is the official reporting lines plus the G-MELT and YOCHIL memo lines. FY2024A TRIESENCE is not disclosed as a standalone actual.

Line	FY2024A	FY2025A	9M 2026A	Q4 2026E	FY2026E	FY2027E	FY2028E
VEVYE	28.1	88.7	90.0	50.1	140	264	367

Total revenue	**1,020**	**1,250**	**1,483**	**1,661**
Revenue growth	26.9%	22.6%	18.7%	12.0%
Adjusted EBITDA	454	614	775	896
EBITDA margin	44.6%	49.1%	52.2%	53.9%

Source: [C10][C12][C13][C14][S13][S15][S21][S22][S23]. Whole numbers at $100 and above. May not sum due to rounding. Other branded FY2030E 117.5 and FY2031E 124.5 round to 118 and 125.

Figure 6a – Cash opex and margin bridge (FY2027E–FY2032E, US$ millions)

The bridge starts from the Q3 2026 cash-opex run rate, adds the verified TYRVAYA cost once, adds assumed G-MELT and YOCHIL programs, and applies a 4% variable load only to same-store revenue above the Q3 2026 annualized pace. Cash opex rises by about a third over the period while revenue nearly triples, which is the source of the margin path.

	FY2027E	FY2028E	FY2029E	FY2030E	FY2031E	FY2032E
Product GP before amort	468	617	784	962	1,143	1,283
Amortization	24.0	24.5	25.0	25.0	25.0	25.0

Core cash opex (Q3 run rate inflated)	247	256	267	277	288	300
TYRVAYA incremental (once)	20.0	20.0	20.0	20.0	20.0	20.0
G-MELT program (assumed)	12.0	20.0	16.0	17.0	18.0	19.0
YOCHIL program (assumed)	6.0	10.0	8.0	8.5	9.0	9.5
Same-store revenue (memo)	557	720	883	1,047	1,212	1,378
Less Q3 2026 annualized same-store revenue	397	397	397	397	397	397
Same-store increment (memo)	159	323	486	650	815	981
Same-store variable (4% of the increment)	6.4	12.9	19.4	26.0	32.6	39.2
Total cash opex	**291**	**319**	**330**	**349**	**368**	**388**
Adjusted EBITDA	**177**	**298**	**454**	**614**	**775**	**896**
EBITDA margin	28.9%	37.1%	44.6%	49.1%	52.2%	53.9%

Source: [C13][C14][C17][S16][S17][S18][S19][S20][S40][S41][G5]. Core FY2027E is Q3 cash opex $59.3 annualized and inflated 4%, then 4% a year [S20][S40][C14]. G-MELT and YOCHIL program figures are assumed, not a disclosed budget [S17][S33]. Same-store revenue is VEVYE, IHEEZO, TRIESENCE, legacy, compounding, and other revenues; the Q3 2026 annualized figure is 4 × $99.3 of printed Q3 revenue on those lines, with BYOOVIZ left inside printed Other branded because it is not separable [C17]. The variable load does not also take 4% of TYRVAYA, BYOOVIZ, OPUVIZ, BYQLOVI, G-MELT or YOCHIL [C14]. FY2026E cash opex of $229 is the nine-month-plus-Q4 build and is not re-derived from this bridge [C5]. May not sum due to rounding.

A 30% Samsung share would add about $2 of gross profit in FY2027E and about $5 in FY2032E; a 50% share would subtract about the same amounts [S18, C13]. G-MELT program sensitivity of about 40% either side is about $8 in the launch year and about $8 by FY2032E [S17]. YOCHIL program sensitivity of about 40% either side is about $4 in the launch year and about $4 by FY2032E [S33]. Core cost inflation of 4% a year is a named rate, because Harrow states none: the U.S. Bureau of Labor Statistics Employment Cost Index showed private-industry compensation up 3.4% in the 12 months to September 2026, and the band is 3–5% [S40, D23]. Each point of core inflation moves FY2032E cash opex by about $17.7 (derived) [S40, C22]. The 4% variable rate cannot be measured from the history, because 2026 cost growth mixes the sales-force expansion and accelerated R&D with volume-driven cost, and Harrow does not disclose line-level opex; the band is 2–8% [S41]. Each point of variable rate moves FY2032E cash opex by about $9.8 (derived) [S41, C22]. Printed Q3 Other branded includes BYOOVIZ, which is not separable; taking the illustrative $2.92 out of the Q3 baseline would lower Adjusted EBITDA by about $0.47 a year [C17, S4].

Q4 2026E and FY2026E vs. guidance

This subsection compares the same bottom-up fourth-quarter build with the reaffirmed FY2026E range. Guidance is as of 9–10 November 2026, when the revenue range was reaffirmed and Adjusted EBITDA was lowered [G1, G2]. The original 2 March 2026 Adjusted EBITDA range of $80–100 is the prior outlook [G4].

Nine-month 2026 revenue was $214 [A2]. Hitting $350–365 therefore requires fourth-quarter revenue of $136–151 [C2]. Management said that reaching the range requires about $136–151 of fourth-quarter revenue [G2]. It also described reasonable scenarios of a modest miss, mostly because of order timing and year-end purchasing [G2]. It still believes the low end is achievable because second-half revenue should exceed the high end contemplated in March [G3].

Our base Q4 2026E is $134 and FY2026E is $348, about $1.9 below the $350 low end and about $17 below the $365 high end [C1, C15, C2]. The shortfall is not closed by a plug [P1]. That $134 uses rounded Other branded of $15.0. An unrounded $15.3 sketch would lift Q4 to $134.3 and FY2026E to $348.4, still below the low end; we disclose the $0.3 difference and do not silently switch to it [C11, S4]. The bear case Q4 is $122 and FY2026E $336, a miss consistent with weaker mix, no IHEEZO year-end recognition, and the order-timing language [G2]. The bull case Q4 is $144 and FY2026E $358, above the low end and not plugged to the high end [C2].

Figure 6b – Q4 2026E product build vs. the implied guidance window (US$ millions)

The fourth-quarter column is the product build. The last rows show the implied window and the gap to the reaffirmed range.

Line	9M 2026A	Q4 2026E	FY2026E	Q4 basis
VEVYE	90.03	50.08	140.11	TRx +49,538.5 add; net price $129.42 per TRx [S1]
IHEEZO	42.83	38.29	81.12	Demand 75,811; $406.64 × 1.242 recognition [S2]
TRIESENCE	20.13	13.40	33.54	Units +5,044 add; $534.76 per customer unit [S3]
Other branded (ex-TRIESENCE)	16.94	15.00	31.94	Rounded; unrounded sketch 15.3 = BYOOVIZ 4 + TYRVAYA 5 + legacy 6 + BYQLOVI 0.3 [S4]
Other revenues	0.33	0.20	0.53	Explicit assumption, not a plug [S5]
ImprimisRx	43.89	17.00	60.89	A lift from the $13.5–15.8 quarterly run rate, not a plug [S5]
G-MELT	0.00	0.00	0.00	Unapproved; first base shipments mid-2028 if approved [S15]
YOCHIL	0.00	0.00	0.00	Phase 3 still ahead; no incremental 2026 program cost on top of existing R&D [S32][S33]
Total	**214.16**	**133.97**	**348.13**	Bottom-up; not scaled to $350–365 [P1][C1]
Implied Q4 to hit guide	—	135.84–150.84	350–365	[C2][G2]
Buffer / gap	—	−1.87 vs. exact low; −16.87 vs. high	—	[C15][C2]

Source: 9M [A2]; Q4 and FY [S1][S2][S3][S4][S5][S15][C1][C2][C11][C15][G2]. Other branded Q3 includes unprinted BYOOVIZ; Q4 adds first TYRVAYA. May not sum due to rounding.

Figure 6c – 2026 quarterly grid (US$ millions)

Printed quarter columns are used below. First-half product-line sums differ from the printed first-half totals by $0.001 on VEVYE, $0.065 on IHEEZO, and $0.066 the other way on the old Other branded line; the offsets net in the company total [A2]. Q1 and Q2 TRIESENCE and the Q1–Q2 Other branded residual are derived from first-half TRIESENCE of $9.4 allocated on later-printed units, and are flagged with an asterisk. The Q3 BYOOVIZ figure of $2.92 is illustrative, not independently measured: it is the residual under a flat-legacy hypothesis [S4]. FY2026E in the forecast file is nine-month printed plus Q4, not the sum of four quarterly official lines.

Line	Q1 2026A	Q2 2026A	Q3 2026A	Q4 2026E	FY2026E (9M+Q4)
VEVYE	20.95	29.39	39.70	50.08	140.11
IHEEZO	1.85	15.62	25.30	38.29	81.12
TRIESENCE	3.82*	5.61*	10.71	13.40	33.54
BYOOVIZ (inside Other branded)	0.00	0.00	2.92*	4.00	6.92
Rest of Other branded (incl. TYRVAYA in Q4)	4.02*	5.40*	4.68*	11.00	25.02
Other revenues	0.07	0.09	0.16	0.20	0.53
ImprimisRx	13.50	14.56	15.84	17.00	60.89
G-MELT	0.00	0.00	0.00	0.00	0.00
YOCHIL	0.00	0.00	0.00	0.00	0.00
Total	**44.20**	**70.66**	**99.30**	**133.97**	**348.13**

Source: Q1–Q3 printed totals and Q3 product lines [A2]; Q1–Q2 TRIESENCE / Other branded derived as described; Q3 BYOOVIZ 2.92 is illustrative under a flat-legacy hypothesis, not a measured actual [S4]; Q4 [S1–S5]. BYOOVIZ launched 1 July 2026, so Q1–Q2 are zero [G11]. Q4 rest of Other branded ($11.00) includes TYRVAYA and BYQLOVI [S4]. * = derived or illustrative split. May not sum due to rounding.*

Shipment timing, year-end purchasing and stocking (especially IHEEZO), VEVYE mix, TYRVAYA transition sell-in, and unprinted BYOOVIZ reorders are the items that move Q4 relative to the $136–151 window [G2, S2, S4, G11]. We do not assign the unnamed Q4 royalty-tier product to VEVYE [G15].

Nine-month Adjusted EBITDA was $7.3, so the full-year floor of more than $40 implies more than $33 in the fourth quarter, consistent with the letter [A4, G1]. Our Q4 Adjusted EBITDA is $36.0 and FY2026E is $43.3, both above those floors [C5]. The bear case FY2026E Adjusted EBITDA is $34.0, below the $40 floor. The bull case $51.1 is still well below the withdrawn $80–100 range. Q4 cash opex is $68.3 [C5]. It starts from Q3 cash opex of $59.3 [C4]. A $5.0 partial-quarter TYRVAYA allowance is added [S10]. A $4.0 allowance for the G-MELT application fee and other submission costs is also added [S10, G15]. Q4 GAAP gross margin of 73.6% is after a $2.5 inventory step-up that is not added back [S11, A4].

9. Valuation

Finagle values the base case at $132.69 per share vs. a $29.37 share price on 12 November 2026, about 352% above (derived) [C25, A24, C24]. About 42% of that equity value is the terminal value (derived) [C24]. The bull is $153.28 and the bear $14.71 per share; their inputs, bridges and year rows are in Appendix A [C25].

Method

Finagle discounts free cash flow to equity at the cost of equity [D24, S45]. It takes the explicit revenue and Adjusted EBITDA for FY2026E–FY2032E from the forecast file as given, compounding from FY2025A [C18]. That is seven explicit years, and Finagle extends them by three more, FY2033E–FY2035E, to a ten-year horizon [C25]. In those extra years, revenue starts from next-period growth of 10.7% and fades toward terminal growth, and EBITDA moves from the 53.9% starting margin with each extra dollar of revenue earning the 64.8% incremental margin [S43, S44, C25]. A terminal value is added at the end of FY2035E [C25]. Terminal growth is Finagle's default of 5.0%, the 10-year Treasury yield on the run date; it was not set or overridden by us [S45, A24]. When free cash flow to equity is negative, Finagle funds it from opening cash first: base FY2026E free cash flow to equity of −$8.45 equals the adjusted opening cash, so that cash is used up in FY2026E and balance-sheet cash is zero thereafter [C25]. The David May rule that adds a year-0 equity raise when cash would otherwise go negative is applied in the cash schedule below [P6, C21].

Balance Sheet Adjustments

Year-0 cash of $8.45 and the share count of 38.93 million equal the opening $72.9 of cash and 37.23 million shares at 31 December 2025 plus the present values and the new shares below [A21, P5, C25]. The stated cash and shares do not already include these items, so they are added once [C25]. No equity was sold for cash in 2026 through 12 November, so the opening figures need no 2026 raise adjustment [A22, P5]. These dollars are outside EBITDA and are not in a later cash-flow year [S12, C19]. The TYRVAYA close cash is already paid, so its discount is 1, and the year-0 equity raise is the shortfall rounded up to the next $50, issued at the share price [C19, C21, P6].

Balance Sheet Adjustments – base case (US$ millions unless noted)

Item	Amount	Timing	Probability	Discount	Present value	Shares issued (millions)
TYRVAYA close cash paid	-30.00	2026-10-01	1.00	1.0000	-30.00	0.0000
Melt FDA-approval milestone payable	-87.17	2027-12-31	1.00	0.8930	-77.84	0.0000
Melt first commercial Annual Net Sales cash milestone	-10.02	2030-12-31	1.00	0.6619	-6.63	0.0000
Year-0 equity raise (David May rule, cash would otherwise be negative)	50.00	2026-11-12	1.00	1.0000	50.00	1.7024
Total present value / new shares					**-64.47**	**1.7024**
Opening cash / shares (31 Dec 2025)					72.927	37.229159
Year-0 cash / shares used					**8.45**	**38.9316**

Source: worked schedule in the valuation result [D24][C25]; items from the forecast file [A23][A15][A18][S24][S25][S34][S35][C19][C21][P6]; opening cash and shares [A21][P5]. Discount is at the 10.50% cost of equity from the 12 November 2026 price date. May not sum due to rounding.

Figure 8 shows which inputs are Finagle defaults, which come from the forecast file, and which are our judgments; the judgments are the starting margin, incremental margin and next-period growth, while the rates and the debt policy are Finagle's defaults.

Figure 8 – Valuation inputs, base case

Input	Base	Basis	Tags
Cost of equity	10.50%	Finagle default: 5.5% plus the 10-year yield	[S45][A24]
Cost of debt	9.67%	Finagle default: year-0 interest of $24.2 divided by year-0 debt	[S45][D24]
Tax rate	21.0%	Finagle default: U.S. federal statutory rate	[S45]
Terminal growth	5.00%	Finagle default: equals the 10-year yield; not set by us	[S45][A24]
Terminal return on invested capital	15.0%	Finagle default	[S45]
Shares (adjusted, millions)	38.93	Forecast-file input: 37.23 at 31 Dec 2025 plus 1.70 from the year-0 raise	[A21][P5][C21][C25]
Price (US$)	29.37	Fetched: previous close, 12 Nov 2026	[A24]
Debt (year 0)	250.0	Fetched from the FY2025 10-K	[D24][C25]
Debt policy	4.0x	Finagle default: year-0 Debt/EBITDA held as a target from FY2026E	[S45]
Cash (adjusted, year 0)	8.45	Forecast-file input plus the cash schedule	[A21][P5][C25]
Starting margin	53.9%	Forecast-file input: FY2032E Adj. EBITDA / revenue	[C18]
Incremental margin (mc)	64.8%	Judgment	[S43]
Next-period growth (gsnext)	10.7%	Judgment: one more year of the same build	[S44]
Terminal WACC	9.20%	Finagle output	[C25]

Source: valuation result [D24][C25]; forecast file [C18][S43][S44][C21][P5]; fetched market data [A24]. Finagle defaults are listed in [S45].

We set the incremental margin halfway between the FY2032E Adjusted EBITDA margin of 53.9% and that year's GAAP gross margin of 75.8%, because an extra dollar of revenue carries the product gross margin less some selling and variable cost [S43]. That 64.8% sits well above the reported history of low-20s Adjusted EBITDA margins, so it extends the long-window margin flag in Section 8 into Finagle's extra years [S43, A3]. We set next-period growth as one more year of the same build: VEVYE, IHEEZO and TRIESENCE add the same units again, G-MELT and YOCHIL take one more price step, and the Other branded components and compounding take their last steps [S44].

Run record. The prompt inputs are opening cash of $72.9 and 37,229,159 shares at 31 December 2025, applied to all three cases under David May's 2 November 2026 instruction, which reads: “year-0 cash is the last fiscal year-end cash plus short-term investments (e.g., FY2025), adjusted for equity raises made during the following year, and the share count is raised from the last fiscal-year figure to reflect those raises” [P5, A21]. The year-0 equity raise follows the same-dated instruction to add a raise “sized to keep cash from going negative, rounded up to the next $50M” [P6]. The 12 November 2026 request was “update the report as needed and run the finagle too” [P7]. Finagle filled defaults for net operating losses (zero), non-operating assets (zero), the cost of equity, terminal growth, terminal return on invested capital, the tax rate, the cost of debt, working capital (no change), the debt policy (target leverage from the first forecast year), and distributions (none) [S45, D24]. The base has no sanity flags; the bull carries “negative cash” and the bear “negative FCFE after year 1” [D24]. Each case has two validation warnings: “average EBITDA growth is 68.1% and there are no acquisitions. If that growth includes acquired EBITDA, use an organic path and book the purchase price with acquisitions, or MnA stays zero” (68.9% in the bull and 30.2% in the bear), and “forecast evidence mentions acquisitions but the case has none, so MnA stays zero” [D24]. Fetched market inputs were a $29.37 previous close and a 4.998% 10-year yield, both on 12 November 2026, and 37,229,705 shares from the 10-K, which the stated 37,229,159 replaces [A24, D24]. The run used Finagle commit 377f177b4013e713fe7c4603962e5f883a67e298 [D24]. For the base case, the warnings mean only that no purchase price is deducted: TYRVAYA is already inside the revenue and cost lines, its $30 close cash is on the cash schedule, and the high average growth is the FY2027E rebound from a low FY2026E base, not acquired EBITDA [C20, C19, C18].

Medium-term organic growth

Next-period growth is the medium-term organic growth forecast [S44]. The starting margin is FY2032E Adjusted EBITDA divided by revenue, 53.9% [C18]. The incremental margin is the contribution margin, set at 64.8%, and it did not move for the pipeline [S43]. The medium-term organic growth forecast of 10.7% is FY2033E from one more year of the same line build [S44]. Figure 8a shows that VEVYE's constant unit add supplies more than half of the $178 increase (derived) [S44, C26].

Figure 8a – Medium-term organic growth, base case (US$ millions)

Line	FY2032E	FY2033E	Change
VEVYE	777	880	102.6
IHEEZO	201	218	17.0
TRIESENCE	296	340	43.2

Firm value (Finagle)	5,407
Less year-0 debt	250.0
Equity value (Finagle)	5,157
Plus adjusted year-0 cash	8.45
Equity value incl. cash (derived)	5,166
Shares (millions)	38.93
Value per share (US$)	**132.69**
Share price (US$, 12 Nov 2026)	29.37
Upside (derived)	352%

Source: valuation result [D24][C25]; PV split, terminal share and upside (derived) [C24]; price [A24]. The PV split discounts Finagle's yearly free cash flow to equity and its terminal value (terminal cash flow of $321 divided by the cost of equity less terminal growth) at the 10.50% cost of equity; the two parts sum to Finagle's equity value. May not sum due to rounding.

Figures 9a and 9b are the whole base-case Finagle statement, FY2025A through FY2035E; the value per share of $132.69 is the result for the case and is not a row in the statement [C25]. Two rows need a note. The debt row follows Finagle's default target of 4.0x Debt/EBITDA, so debt rises with EBITDA and the new borrowing is paid out in free cash flow to equity from FY2027E [S45, C25]. The cash row accumulates that free cash flow to equity because no distribution is set, while balance-sheet cash is zero after FY2026E; Finagle's values are printed as output and not corrected [C25]. Capex is Finagle's own reinvestment rule, not a forecast-file input; Harrow's nine-month 2026 capex was $1.06 [A6, C25]. The result file does not carry the SBC, interest, pre-tax income, NOL, cash tax, working-capital, EV, FCF-per-share or WACC rows of Finagle's report sheet, so they are not reproduced [D24].

Firm value	8,684	9,188	9,689	10,193	10,706

Source: valuation result [D24][C25]. FY2033E–FY2035E are Finagle's extension from the starting margin, incremental margin and next-period growth [S43][S44]. May not sum due to rounding.

Figure 13 shows a wide spread: the bear is below the share price and the base and bull are far above it, because the bear removes the G-MELT launch from the window and fades the branded net adds, so its later-year EBITDA stays at $143–171 while the base reaches $896 by FY2032E [C25, A24].

Figure 13 – Scenarios vs. price

	Bear	Base	Bull
Value per share (US$)	14.71	132.69	153.28
Share price (US$, 12 Nov 2026)	29.37	29.37	29.37
vs. price (derived)	-50%	352%	422%
FY2032E Adj. EBITDA	143	896	1,043

Source: valuation result [D24][C25]; price [A24]; vs. price (derived) [C24]; EBITDA from the forecast file scenarios [C14][S42].

Caveats

Finagle's default debt policy is the largest input we did not choose. It holds year-0 Debt/EBITDA of 4.0x from FY2026E, so base debt rises from $250 to about $4,870 by FY2035E and that borrowing is paid out to equity; a policy that held debt flat would lower the value, and this run does not size by how much [S45, C25]. Year-0 debt of $250 is the FY2025 10-K figure and excludes the $50 of add-on notes issued in March 2026, while year-0 cash likewise excludes their proceeds [A6, D24]. The 8.625% coupon, the 2030 maturity and any refinancing terms are not modelled beyond Finagle's 9.67% cost of debt [A6, S45]. The year-0 equity raise of $50 in the base, $100 in the bull and $50 in the bear is a modelling rule, not an announced offering, and its size and price are assumed [C21, P6]. The bull's “negative cash” flag comes from a floating-point residue of essentially zero (below $0.0001) in FY2026E once opening cash is used up, so no further raise is added [D24, C25]. The bear's free cash flow to equity is about zero in FY2030E–FY2031E and slightly negative from FY2032E; Finagle shows that as a small negative dividend, an implied equity contribution of under $2 a year that is not in the cash schedule [D24, C25]. G-MELT and YOCHIL revenue and the Melt approval cash are unweighted and conditional on approval [S15, S32, S25]. The CMS pass-through and J-code stock milestone of about 1.11 million shares is undated and is not in the share count, and Samsung's net-sales milestones and the up to $70 of TYRVAYA milestones are not in cash [S12, C7, A8, C19]. Terminal value is about 42% of the base equity value at a terminal growth rate equal to a 5.0% 10-year yield, and the 64.8% incremental margin keeps margins rising after FY2032E [C24, S45, S43]. Finagle's capex rule lifts capex from $0.9 in FY2025A to $270 in FY2032E, far above Harrow's reported capex, which lowers the value [C25, A6]. This report draws no rating or price target.

Appendix A – Bull and Bear Cases

The bear misses the $350 FY2026E low end on a weaker fourth-quarter mix, no IHEEZO year-end recognition, and earlier fading of net adds, plus a G-MELT approval delayed past 2030, no YOCHIL revenue in the window, a haircut to the other lines, and product gross margins about 3 points below the base [G2, S8, S15, S32, S18, S21, S22, S23]. Bear FY2026E revenue is $336 and Adjusted EBITDA is $34.0, below the floor of more than $40 [G1, C5]. Combined bear Melt sales do not reach $100 of Annual Net Sales in the explicit window. The bull finishes above the $350 low end at $358, is not plugged to the $365 high end, includes an 8% VEVYE coverage increment above the held fourth-quarter exit, ramps G-MELT faster than the 15% base, and uses a faster YOCHIL penetration of the same IHEEZO one-third [S15, S21, S32]. Combined bull Melt sales reach $100 of Annual Net Sales in FY2029E and $250 in FY2032E, which would involve $10.0 and then $25.0 of commercial cash that is still not an EBITDA item [S12, A18, A20]. Product margins in the bull are about 1.5 points above the base, and launch spend is 8% above the base G-MELT and YOCHIL programs [S17, S33]. The bear also carries operating leverage as a named lever: core cash opex inflates at 5% instead of 4%, and variable opex is 8% instead of 4% of same-store revenue above the Q3 2026 annualized pace [S42, S40, S41]. That lever takes about $24.6 off bear FY2032E Adjusted EBITDA, to $143, so the bear margin is 22.5% rather than about 26% (derived) [S42, C22]. The bull keeps the base cost build, 4% core inflation and 4% variable, measured from the same Q3 2026 base [C14, C17].

Figure 7 – Scenarios vs. the base (US$ millions)

By FY2032E the bear is $636 of revenue and $143 of Adjusted EBITDA, against $1,661 and $896 in the base and $1,845 and $1,043 in the bull.

	FY2026E	FY2027E	FY2028E	FY2029E	FY2030E	FY2031E	FY2032E
Revenue, bear	336	515	586	624	624	631	636
Revenue, base	348	613	803	1,020	1,250	1,483	1,661
Revenue, bull	358	646	866	1,127	1,382	1,628	1,845
Adj. EBITDA, bear	34.0	110	150	171	163	150	143
Adj. EBITDA, base	43.3	177	298	454	614	775	896
Adj. EBITDA, bull	51.1	204	347	537	718	891	1,043
EBITDA margin, bear	10.1%	21.4%	25.7%	27.4%	26.2%	23.7%	22.5%
EBITDA margin, base	12.4%	28.9%	37.1%	44.6%	49.1%	52.2%	53.9%
EBITDA margin, bull	14.3%	31.7%	40.0%	47.7%	51.9%	54.7%	56.5%

Figure 7 (continued) – Value per share by scenario

The valuation keeps the same ordering as the EBITDA paths, with only the bear below the share price.

	Bear	Base	Bull
Value per share (US$)	14.71	132.69	153.28
Share price (US$, 12 Nov 2026)	29.37	29.37	29.37

Source: valuation result [D24][C25]; price [A24].

The line builds show that the bear's gap to the base is mostly VEVYE, whose net adds stop after FY2028E, and G-MELT, which has only $15 of revenue by FY2032E; the bull's gain is mostly the VEVYE coverage increment and a faster G-MELT ramp [S21, S15, C12].

Appendix B – Numbered sources

Canonical tags only. Instance suffixes such as C10_1 in forecast.json distinguish different year or line values that share a calculation template; they are not listed here. Unless a tag states otherwise, narrative amounts in the body are in US$ millions. Exact contract figures in this appendix (for example Melt Schedule A cash of $87,167,940, the $47,942,367 stock milestone at $43.13 per share, and the $260,021,965.02 sum of commercial cash milestones) are in actual U.S. dollars, not millions, and the unit is stated in the tag.

Actuals

A1 "IHEEZO net sales $81,348,000 (2025), $49,303,000 (2024); VEVYE net sales $88,688,000 (2025), $28,061,000 (2024); Other branded products net sales $25,326,000 (2025), $37,836,000 (2024); Other revenues, net $394,000 (2025), $915,000 (2024); ImprimisRx revenue, net $76,547,000 (2025), $83,499,000 (2024); Total revenues, net $272,303,000 (2025), $199,614,000 (2024)." (D2, MD&A revenues table (typset ~p.54).)

A2 "Three and nine months ended September 30, 2026: IHEEZO $25,297,000 and $42,833,000; VEVYE $39,699,000 and $90,033,000; TRIESENCE $10,707,000 and $20,134,000; Other branded products $7,595,000 and $16,944,000; Other revenues $164,000 and $327,000; Branded revenue, net $83,462,000 and $170,271,000; Compounding revenue, net $15,835,000 and $43,890,000; Total revenues, net $99,297,000 and $214,161,000." (D1, MD&A product revenue table / letter table.)

A3 "For the year ended December 31, 2025 and 2024: Total revenues $272,303,000 and $199,614,000; Gross margin 75% and 75%; Net income (loss) $(5,139,000) and $(17,481,000); Adjusted EBITDA $61,923,000 and $40,327,000. Q4 2025 Adjusted EBITDA $24,170,000 on revenue $89,092,000." (D4, results table.)

A4 "Q3 2026: Net income $9,757,000; stock-based compensation $3,728,000; interest as disclosed; depreciation $446,000; amortization of intangible assets $5,572,000; litigation settlement gain $(5,000,000); Adjusted EBITDA $21,217,000. Nine months 2026 Adjusted EBITDA $7,327,000; net loss $(35,115,000); amortization $16,228,000; depreciation $1,361,000; SBC $11,354,000; GAAP operating expenses $63,432,000 (Q3) and $173,927,000 (9M); gross profit $74,903,000 (Q3) and $152,311,000 (9M)." (D1, MD&A / letter reconciliation.)

A5 "Q3 2026 branded gross margin 79.3% vs. 81.6% in the prior-year quarter; 9M branded 75.5% vs. 78.3%. Compounding Q3 55.2% vs. 59.0%; 9M 54.1% vs. 62.5%. Consolidated GAAP gross margin 75% in Q3 2026 (gross profit $74,903,000 / revenue $99,297,000) and 71% for the nine months." (D1, MD&A gross margin.)

A6 "Cash and cash equivalents $75,336,000 at September 30, 2026 vs. $72,927,000 at December 31, 2025. Notes payable, net $292,716,000 vs. $243,184,000. 8.625% Senior Notes due 2030: additional $50,000,000 issued March 2026, net proceeds $48,411,000, total principal $300,000,000. Common shares outstanding 37,522,597 at September 30, 2026 and 37,533,160 as of November 5, 2026. Nine-month capital expenditures $1,060,000." (D1, balance sheet / subsequent events.)

A7 "In 2025, R&D expenses included $8,450,000 recorded as acquired in-process R&D as part of the acquisition of Melt in November 2025. As of December 31, 2024, we owned approximately 45% of Melt's equity and voting interests issued and outstanding, along with a mid-single digit royalty on future net sales of MELT-300. The Melt acquisition closed on November 17, 2025, and was treated as an asset acquisition." (D2, R&D / Melt acquisition.)

A8 "In consideration of the Rights, we made a one-time upfront payment to Samsung of $4,000,000 in February 2026, and Samsung will be eligible to receive additional one-time payments based on the achievement of net sales-based milestones of the Products. In addition to other mutually agreed terms, we shall pay to Samsung a share of net sales from the Products generated in the U.S. market. The Company accounted for the transaction as an acquisition of assets and capitalized the one-time upfront payment." (D2, Samsung agreement note.)

A9 "FDA Approval cash $87,167,940; CMS pass-through reimbursement AND J-code stock $47,942,367. Annual Net Sales $100,000,000 / $250,000,000 / $500,000,000 / $750,000,000 / $1,000,000,000 trigger cash $10,024,313.10 / $25,017,198.78 / $50,034,397.56 / $74,964,428.40 / $99,981,627.18. The stock milestone is calculated at a contractual $43.13 per share." (D6, Schedule A.)

A10 "We do not expect the level of TYRVAYA revenue we currently anticipate for 2027 to be sufficient to achieve the first net sales milestone. As of the date of this Quarterly Report, no milestone under the APA was considered probable of being achieved and no contingent liability was recorded. Incremental annual operating expenses associated with TYRVAYA of approximately $20 million. Gross margins on TYRVAYA expected to be consistent with the Company's other branded products, before amortization and inventory step-up." (D1, liquidity / TYRVAYA.)

A11 "GAAP gross margins were 75% for the third quarter of 2026 and 75% for the third quarter of 2025. Nine-month 2026 gross margin 71%." (D3, HTML extract, financial overview table.)

A12 "VEVYE delivered a record third quarter of $39.7 million in revenue, up 35% sequentially and 75% year over year. IHEEZO and TRIESENCE unit and revenue figures as presented in the letter table match D1." (D3, HTML extract, product commentary.)

A13 "Mark L. Baum beneficially owned 3,663,630 shares, or 9.65%, as of April 21, 2026. Beneficial ownership percentages are based on 37,273,420 shares outstanding as of that date. A subsequent Form 4 filed for a May 14, 2026 open-market purchase reported 2,996,130 shares held directly after buying 10,000 shares." (D16, Security Ownership table.)

A14 "Mark L. Baum is a founder, Chairman of the Board and Chief Executive Officer. In 2011 he led the restructuring and reorganization of the Company, was appointed a director in December 2011, CEO in April 2012, and Chairman again from August 2021. He is a graduate, cum laude, of The University of Texas at Arlington and a graduate of California Western School of Law. In 1999 he founded YesRx, an HIV-focused pharmacy business. Before Harrow, as founder of TBLF, LLC, he made more than 200 investments in, and provided advisory and board service to, more than 40 private and public companies." (D16, Director nominee biography.)

A15 FDA-approval cash $87,167,940 payable under Melt Schedule A, recorded in the forecast file as −87.16794 (US$ millions) on the cash-share schedule. (Melt APA exhibit, Schedule A.)

A18 First commercial Annual Net Sales cash milestone $10,024,313.10 on Melt Schedule A, recorded in the forecast file as -10.02 (US$ millions), at $100 of Annual Net Sales of Melt Products. (D6, Schedule A.)

A19 The same $10,024,313.10 first commercial cash milestone, recorded as -10.02, used on the bull cash-share schedule (FY2029E timing). (D6, Schedule A.)

A20 Second commercial Annual Net Sales cash milestone $25,017,198.78 on Melt Schedule A, recorded in the forecast file as -25.02 (US$ millions), at $250 of Annual Net Sales of Melt Products. (D6, Schedule A.)

A21 "Cash and cash equivalents $72,927,000 at December 31, 2025; no short-term investments line on the balance sheet (total current assets $211,750,000 = cash $72,927,000 + accounts receivable $110,895,000 + inventories $13,523,000 + prepaid and other $14,405,000). Common stock: 37,229,159 shares issued and outstanding at December 31, 2025." (D1, condensed consolidated balance sheets; statements of stockholders' equity.)

A22 "Nine months ended September 30, 2026 financing: net proceeds from 8.625% notes payable $49,000,000; proceeds from exercise of stock options $1,418,000; payment of payroll taxes on equity awards ($914,000). Stockholders' equity 1 Jan–30 Sep 2026: issuance of common stock only on exercise of employee stock options (298,376 shares) and vesting of RSUs (28,000), less 32,938 shares withheld. No sale of common stock for cash. EDGAR filings 1 Jan–12 Nov 2026 include no prospectus supplement or registered offering." (D1, statements of cash flows; statements of stockholders' equity.)

A23 "On October 1, 2026, we paid $30,000,000 in cash at the closing of the TYRVAYA acquisition, funded with cash on hand and without borrowings under our credit facility." (D1, MD&A liquidity.)

A24 "^TNX info.previousClose 4.998 on 2026-11-12, percent divided by 100"; share price "info.previousClose" $29.37 as of 2026-11-12, both fetched by Finagle from Yahoo Finance; shares fetched 37.229705 million from the 10-K. (D24, market and rates fetch record.)

Guidance and management statements

G1 "We are lowering our Adjusted EBITDA outlook from $80 million to $100 million to a floor of "more than $40 million," including more than $33 million in the fourth quarter." (D3, Reflecting on 2026 Guidance.)

G2 "We also see reasonable scenarios in which we finish modestly below the low end of our revenue range, mostly because of order timing and year-end purchasing." Management reaffirmed full-year 2026 revenue guidance of $350–365 and stated that reaching the range requires about $136–151 of fourth-quarter revenue. (D3, Reflecting on 2026 Guidance.)

G3 "Management believes the low end is achievable because second-half revenue should exceed the high end contemplated in March." (D3, guidance / 2H commentary.)

G4 Original FY2026 revenue guidance $350–365, including first-half guidance of $133–153, and original Adjusted EBITDA guidance of $80–100, issued 2 March 2026. (D4, 2026 guidance (2 March 2026).)

G5 "The Company expects TYRVAYA to contribute in excess of $30 million of revenue in 2027, with approximately $20 million of incremental annual operating expenses. We do not expect the level of TYRVAYA revenue we currently anticipate for 2027 to be sufficient to achieve the first net sales milestone." (D1, TYRVAYA MD&A / subsequent events.)

G6 "The licensor of VEVYE has not yet agreed that its license agreement's restriction on our commercialization of other prescription dry eye disease products does not apply to TYRVAYA, and discussions with the licensor remain ongoing. If we are required to divest or terminate the right to commercialize TYRVAYA in those territories, or agree to modified terms with the VEVYE licensor, our expectations for TYRVAYA's contribution to our 2027 financial results could differ materially from the actual outcome." (D1, liquidity / risks.)

G7 "PDUFA for G-MELT / MELT-300 in Q4 2027, assuming standard review, following a planned NDA submission by year-end 2026 after completion of the pre-NDA meeting." (D15, slide 29.)

G8 "G-MELT / MELT-300 launch shown as 2028; the launch timing is conditional on approval, not itself an approval." (D15, slide 5.)

G9 "The pre-NDA meeting has been completed and the Company plans to submit the NDA by year-end 2026, an acceleration from the prior first-half 2027 expectation. LOUISE Phase 3: P=0.009 vs. midazolam and P=0.0001 vs. placebo, under a Special Protocol Assessment." (D3, pipeline / G-MELT.)

G10 "Exclusive U.S. commercial rights to BYOOVIZ and OPUVIZ; Samsung will develop, manufacture and supply the Products for Harrow to commercialize in the U.S. market. The $9 billion U.S. retinal market and $4.2 billion Medicare anti-VEGF figures are market color, not Harrow guidance." (D13, announcement.)

G11 "BYOOVIZ launched July 1, 2026. Third-quarter revenue was below the Company's model, with more accounts and small trials; the Company described fourth-quarter progress as ahead, without a quantified dollar figure." (D3, BYOOVIZ commentary.)

G12 "OPUVIZ planned launch in 2027, described in the latest deck as mid-2027 (the 2025 10-K had said middle of 2027)." (D15, slide / pipeline.)

G13 "Four commercial teams: OSD, Retina, Surgical, and Access+. HarrowRx launched November 1, 2026." (D3, commercial organization.)

G14 TYRVAYA worldwide rights except Japan; close 1 October 2026; $30 cash at close and up to $70 of milestones in periods ending 31 December 2029. Japan: Viatris pays Harrow tiered royalties (rates not disclosed). (D1 / D9, APA / close 8-K.)

G15 "Management cited lower-than-expected gross margins through the year, a Q3 profitability miss vs. the internal model, the G-MELT FDA application fee and other submission costs, accelerated R&D (QUELL completed, TRIESENCE Phase 3, YOCHIL), TYRVAYA transition and purchase accounting / inventory step-up, and a royalty tier step-up on an unnamed product as drivers of the lowered Adjusted EBITDA outlook." (D3, Q4 cost commentary.)

G16 "A new major national plan covering 10+ million commercial lives is expected to take effect on January 1, 2027. The ratio of covered to cash-pay VEVYE prescriptions is reversing, with improved prescription economics in Q3 that continued into October." (D3, VEVYE coverage.)

G17 "Following completion of remaining studies, we expect to prepare and submit an NDA for MELT-300 in the first half of 2027. If promptly approved by the FDA, we expect to commercially launch MELT-300 in the second half of 2028. MELT-300 is a patented sublingual/ODT midazolam 3 mg + ketamine 50 mg. MKO Melt is a compounded sublingual sedation product sold by ImprimisRx and currently administered by over 800 U.S. ophthalmic institutions (company claim)." (D2, MELT-300 development (as of March 2, 2026).)

G18 "5M+ annual U.S. cataract surgeries — G-MELT's initial target market. 100M+ potential short-duration procedures in several large markets. Path to launch: pre-NDA meeting completed Q4 2026; NDA submission expected November/December 2026; potential FDA approval Q4 2027; potential launch 2028. If FDA-approved, G-MELT could be the only on-label product for sedation during cataract surgery. Exclusive license from Catalent; Zydis® has supported 35+ FDA-approved products." (D15, slide 27.)

G19 "Durable Growth: A New Product Every Year. At least one new product every year through the end of the decade, launched within Harrow's existing cost structure and commercial footprint. 2028 pipeline: YOCHIL expected 2028; G-MELT expected 2028." (D15, slide 5.)

G20 "Surgical serves cataract and refractive surgeons... with G-MELT expected to expand that offering upon FDA approval. We continue to believe the sublingually administered non-opioid G-MELT, if approved for marketing, represents a near-term opportunity to be the only on-label product for sedation during cataract surgery, potentially helping millions of Americans avoid exposure to opioids and IVs during the most common surgical intervention in the United States." (D3, Four Focused Commercial Teams / G-MELT.)

G21 "Commercial Readiness and Launch (H2 2028, as then planned): Leverage Harrow's existing commercial infrastructure and MKO Melt customer network to execute launch preparations — including manufacturing scale-up, packaging, supply-chain validation, reimbursement, market-access planning, and much more. The November 2026 deck subsequently accelerated approval to Q4 2027 and kept launch in 2028." (D17, Next Steps / commercial readiness.)

G22 "Our ImprimisRx brand has dispensed over 400,000 compounded MKO Melt troches which, as a compounded formulation, is similar to the MELT-300 product candidate. Customers seem to love the MKO Melt – so much so that they pay for it out of their capitated cataract surgery procedure fees." (D18, MKO Melt economics.)

G23 "Built for Operating Leverage: a scalable cost structure positions Harrow to grow revenue faster than operating expenses over time. Existing infrastructure. 3x Surgical team. Four focused selling teams; G-MELT and YOCHIL sit with the Surgical team." (D15, slide 4 / 9.)

G24 "YOCHIL, our midazolam orally disintegrating tablet (ODT) program, also continues to advance and represents an attractive opportunity in its own right. During the quarter, we completed our End-of-Phase 2 meeting with the FDA and are incorporating the Agency's feedback into refinements of our Phase 3 study design and protocol." (D20, YOCHIL / pipeline.)

G25 "YOCHIL (MELT-210) (Midazolam ODT). Sedation, Anxiolysis, and Amnesia. Oral dissolving tablet: 3mg Midazolam. Market Opportunity: to be fully developed into a product intended for sedation, anxiolysis and amnesia prior to diagnostic, therapeutic or endoscopic procedures or before induction of anesthesia. Potential 2028 launch." (D22, pipeline / YOCHIL.)

G26 "Harrow, through its ImprimisRx subsidiary, has successfully marketed the MKO Melt, a compounded sublingual sedation product widely used by ophthalmologists for more than a decade, with the product used in over 500,000 cataract surgeries. This long-standing, positive experience, by over 700 U.S. ophthalmologists... potential to replace opioid-based intravenous sedation during the more than 4,000,000 annual U.S. cataract surgeries. Upon FDA approval of MELT-300, Harrow intends to ensure customer access to an FDA-approved product and discontinue the MKO Melt." (D21, Immediately Accretive Launch / Operational Synergies.)

Estimates

No post-Q3 2026 consensus pull was taken. A pre-Q3 print is not used as a current consensus [P1]. There are no E-tags in this forecast.

Assumptions

S1 Q4 2026E VEVYE units continue the average of the last two reconstructed TRx increments (50,051 and 49,026, average 49,538.5), so Q4 TRx is 337,415 + 49,538.5 = 386,953.5. Net price/mix is the Q3 derived ratio of about $117.66 per TRx times a held +10% sequential step ($129.42 per TRx). That +10% is a prior held assumption, not a newly quantified September increment. TRx from Q3 2025 onward is reconstructed, not independently measured units, and the revenue/TRx ratio is not a true ASP. (D3, VEVYE NPP commentary.)

S2 Q4 2026E IHEEZO demand is 62,814 × (62,210 / 51,545) = 75,811 customer units, which is the Q3 2026 year-over-year unit add of 10,665 allocated with 2025 seasonal weights. Q4 dollars use the Q3 2026 realization of $406.64 per customer unit times the 2024 Q4/Q3 recognition lift of 1.242, not the 2025 lift of 1.344 and not a demand-only case. The lift is a channel-recognition mechanism, not a true ASP. 2026 is the first year-end without pass-through; the milder 2024 factor is used for that reason. (D3, IHEEZO seasonality commentary.)

S3 Q4 2026E TRIESENCE units continue the average of the last two deck increments (4,669 and 5,419, average 5,044), so Q4 units are 20,022 + 5,044 = 25,066. Realization is held at the Q3 2026 ratio of $534.76 per customer unit. Realization is not a true ASP. Q1–Q2 2026 dollars were allocated, not measured quarterly prices, and are not used as a seasonal price path. (D3, TRIESENCE.)

S4 Q4 2026E Other branded (issuer definition, excluding TRIESENCE) is $15.0, a rounding of a $15.3 sketch (BYOOVIZ $4, TYRVAYA $5, legacy $6, BYQLOVI $0.3). The $0.3 difference is disclosed and is not used to hit guidance. BYOOVIZ Q3 dollars are unprinted; the $4 Q4 figure is an assumption, not a measured run rate. (D3, other branded / launches.)

S5 Q4 2026E compounding $17.0 and other revenues $0.2 are explicit assumptions, not a plug to the $350–365 range. Compounding has been running $13.5–15.8 per quarter in 2026; $17 allows a seasonal/year-end lift without inventing a new trajectory. (D3, compounding / other revenues.)

S6 FY2027E TYRVAYA revenue of $33 sits just above the conditional management floor of revenue “in excess of $30 million,” and is Harrow product sales, not a profit share. The floor is conditional on the unresolved Novaliq consent. FY2028E $36 is a modest step-up, not a peak. No 2027 sales milestone is assumed, consistent with the 10-Q statement that anticipated 2027 revenue is not sufficient to hit the first milestone. (D1, TYRVAYA.)

S7 BYOOVIZ and OPUVIZ dollars are forecast as Harrow-recognized product sales inside Other branded, consistent with Other branded (not Other revenues) being the residual product bucket after July 1, 2026 and with Harrow having exclusive U.S. commercial rights and full commercial responsibility. The Samsung 'share of net sales' rate is undisclosed, and the filings reviewed do not include a principal-versus-agent policy for the biosimilars. If the share is presented net of revenue, Harrow-recognized dollars would be lower than an end-market figure; if presented gross, the share reduces gross margin. The rate is not assumed to be zero. Market-size figures of $9 billion / $4.2 billion are not used as a Harrow forecast. (D1 / D12 / D13, Samsung accounting.)

S8 Superseded as the base G-MELT timing assumption by S15. The November 2026 deck still dates a 2028 launch as conditional on approval (slide 5 and slide 27). There is no dated, specific mechanism in the latest sources that would cause a 2028 launch, if approved on a Q4 2027 standard-review PDUFA, to be missed. The base therefore uses mid-2028 first shipments. The earlier no-revenue-through-FY2028 path is retained only as the bear case (approval delay or non-approval). (D15 / D2, G-MELT timing.)

S9 Superseded as the forward gross-margin method by S16, S18 and S19. Q3 2026 consolidated GAAP gross margin was 75% and branded 79.3%. No numeric FY2027 or FY2028 consolidated gross-margin guide was verified after the Q3 2026 EBITDA cut. Forward GAAP gross margin is now a weighted product-level build minus amortization, not a flat 75–75.5% assumption. (D1 / D15, gross margin.)

S10 Q4 2026E cash operating expenses of $68.258 start from Q3 cash opex of $59.258 plus a $5.0 partial-quarter TYRVAYA opex allowance and a $4.0 allowance for the G-MELT FDA application fee and other submission costs (the company did not quantify the fee separately). The earlier statement that no G-MELT launch budget would be invented is withdrawn: missing disclosure is not treated as zero cost. Forward G-MELT program spend and the core opex bridge are in S17 and S20. (D1 / D15, cash operating expenses.)

S11 Q4 2026E GAAP gross margin 75.5% is near the Q3 75% consolidated rate, with better branded mix partly offset by TYRVAYA inventory step-up and the unnamed royalty tier. An inventory step-up of $2.5 is assumed to hit GAAP (and Adjusted) gross profit and is not added back, because the Company’s Adjusted EBITDA definition does not list inventory step-up as an add-back. (D1, Q4 gross margin / step-up.)

S12 Melt contingent amounts are not deducted from Adjusted EBITDA. The $87,167,940 FDA-approval cash would be a cash outflow within 75 days of achievement, possibly around late 2027 or early 2028 if PDUFA is Q4 2027, and is recorded only as contingent M&A cash, not an expense. The CMS pass-through-and-J-code milestone is $47,942,367 of stock at a contractual $43.13 per share, or about 1,111,578 fixed shares, not cash and not marked to market; it is not assumed to be issued in a specific year because pass-through award is uncertain. Commercial Net Sales milestones are each payable once, can stack in the same year, and are due within 75 days after year-end if Annual Net Sales of Melt Products (including royalties and profit distributions) hit the thresholds on or before December 31, 2035. Combined base G-MELT and YOCHIL sales first exceed $100 of Annual Net Sales in FY2030E, so the first commercial cash milestone is on the base cash-share schedule at 31 December 2030; the path does not reach $250 in the explicit window. A second FDA-approval cash payment is not added for YOCHIL. (D6, Schedule A / payment mechanics.)

S13 FY2027E–FY2032E compounding is $72 / $72 / $72 / $73 / $75 / $77, held flatter from FY2028E than the prior $72–82 path to allow some site conversion from compounded MKO Melt to branded G-MELT. The conversion is not assumed to be one-for-one or complete; compounded MKO remains in ImprimisRx. Legacy products inside Other branded are the residual after TYRVAYA, BYOOVIZ, OPUVIZ and BYQLOVI and are roughly $23–25.5 a year. See drivers.csv for the component add-up each year. (D3, legacy / compounding trajectory.)

S14 TRIESENCE U.S. composition and method patents are listed as expiring in December 2029 and March 2029. The base lets TRIESENCE decelerate after FY2029E (flat in FY2031E, down about 3% in FY2032E) rather than assuming a cliff in 2029, but post-2029 generic or share loss is a named bear lever. (D2, TRIESENCE patents.)

S15 Base G-MELT revenue is an unweighted, conditional path: it uses the company's planned 2028 launch, which is itself conditional on approval, and does not assert that the NDA has been or will be approved. First shipments are assumed in mid-2028 (about two commercial quarters) after a Q4 2027 standard-review PDUFA. Volume x net price: 60,000 / 250,000 / 500,000 / 750,000 / 750,000 units in FY2028E-FY2032E at $175 / $180 / $185 / $190 / $195 net realization, or $10.5 / $45.0 / $92.5 / $142.5 / $146.25. The mature 750,000 unit rate from FY2031E is 15% of the 5 million U.S. cataract surgeries used as the floor of the company's 5 million-plus initial target, per the 11 November 2026

instruction that an FDA-approved product should exceed a 10% compounded reference. A 10% current annual MKO share is not a verified printed figure in the sources used. Printed figures are cumulative troches or cumulative surgeries, plus an 800-institution early-adopter base. Net price is a mid assumption between bundled/capitated facility economics and a possible later separate-reimbursement outcome; pass-through and J-code are not assumed as a base-case certainty. The 100 million-plus short-duration procedure opportunity is upside and is not in the base. (D15, G18, P4.)

S16 The Catalent Zydis royalty payable by Harrow is not disclosed. Third-party Zydis licenses have been described as a single-digit royalty on net sales (exact rates redacted). The base uses a 7% royalty equivalent plus about 15% manufacturing/COGS and 6% residual distribution, for a 72% G-MELT product gross margin (band 65–78%). The royalty is not assumed to be zero. (D19, single-digit royalty comparator.)

S17 G-MELT launch spend is not disclosed. Missing guidance is not treated as zero cost. The base books an explicit program: $12 pre-launch in FY2027E (manufacturing scale-up, reimbursement, medical, remaining regulatory), $20 in the FY2028E launch year, and $16–19 in-market in FY2029E–FY2032E. Bands are roughly ±40%. This is incremental to the existing Surgical team, which the company says will carry G-MELT upon approval and launch within the existing commercial footprint. It does not invent a second 100-person sales force, and it does not double-count the Q3 2026 cash-opex run rate that already includes the 2026 commercial expansion (OSD more than doubled; surgical team 3x). (D3 / D15, opex / existing footprint.)

S18 Central assumption: Harrow records gross product sales and pays Samsung 40% of U.S. net sales, with about 8% other product cost, for a 52% BYOOVIZ/OPUVIZ product gross margin. The rate is not disclosed; the band is a 30% share (about 62% product GM) to a 50% share (about 42% product GM). An alternative presentation in which Harrow recognizes only its retained share as revenue would lower reported revenue and raise the reported margin percentage, with a similar dollar gross profit if the share is the same rate. The base does not use the 30% or 50% rate and does not net the share from revenue. (D1 / D12, Samsung share.)

S19 Product gross margins before amortization used in the weighted build: VEVYE 80%, IHEEZO 82%, TRIESENCE 80%, TYRVAYA 79% (company: branded-like before amort and inventory step-up), legacy/BYQLOVI 78%, compounding 55% (Q3 55.2%), G-MELT 72% after the Catalent comparator and manufacturing (S16), biosimilars 52% (S18). GAAP consolidated gross margin equals this product gross profit minus amortization, divided by revenue. (D1, product GM.)

S20 FY2027E core cash opex is the Q3 2026 cash run rate of $59.258 million, annualized and inflated 4% (S40, BLS ECI-based named rate), or $246.513 million. That run rate already includes the 2026 commercial expansion (Q3 SG&A $53.1 million vs. $35.9 million a year earlier) and elevated R&D (Q3 $10.3 million vs. $3.3 million) and already pays for the Q3 2026 revenue pace. TYRVAYA's verified ~$20 million incremental annual opex is added once from FY2027E. Same-store volume-variable opex is 4% (S41) of same-store VEVYE, IHEEZO, TRIESENCE, legacy, compounding and other-revenue dollars above the Q3 2026 annualized same-store revenue (C17), so dedicated TYRVAYA, G-MELT and YOCHIL program costs and the Samsung take on BYOOVIZ/OPUVIZ are not double-counted as variable. Core opex then grows 4% a year. This is an assumption, not a company budget. (D3, SG&A / R&D run rate.)

S21 FY2027E VEVYE $264 and FY2028E $367 hold a reconstructed net add of 49,538.5 TRx per quarter and a Q4 2026E derived net price of about $129.42 per TRx, held through FY2032E. That is a transparent aggregate stock-flow proxy, not a prescriber, new-start, or refill cohort, and steady net additions are a judgment, not a finding of saturation. Percentage growth decelerates as the base rises (FY2027E TRx about 63% above FY2026E, then about 39%, 28%, 22%, 18%, and 15%). A 1 January 2027 coverage win is real commentary and is not treated as a proven double-count of the Q4 exit; it is omitted from the base because covered-share and covered-versus-cash economics are not disclosed, and it is a bull-case increment of 8% above that exit, not a base-case rate. No later-year price increase is invented. TRx from Q3 2025 is reconstructed; revenue/TRx is derived, not a measured ASP. Composition-patent expiry from December 2030 is a later-window risk; other listed claims run into 2037–2039. (D3 / product rebuild, n/a.)

S22 FY2027E IHEEZO $116 and FY2028E $133 use a constant annual add of 41,804 customer units (the Q3 2026 year-over-year add of 10,665 divided by the 2025 Q3 seasonal weight) allocated with 2025 seasonal weights. The forward run-rate starts from a cleaned 2026 four-quarter rate of 243,849, which deseasonalizes Q3 2026 and does not carry Q2 2026 stocking into later years. FY2027E units are 285,654 and FY2028E 327,458, then the same add continues through FY2032E. FY2027E–FY2032E revenue is annual demand times the Q3 2026 realization of $406.64 per customer unit, with no net full-year inventory build. Q4 2026E dollars alone include the 2024 recognition lift of 1.242. Realization is revenue per customer unit, not a true ASP. (D15, IHEEZO units.)

S23 FY2027E TRIESENCE $80.6 and FY2028E $124 hold the average net add of 5,044 customer units per quarter through FY2032E, from Q4 2026E 25,066 to FY2027E 150,704 and FY2028E 231,408. Realization is held at the Q3 2026 ratio of $534.76 per customer unit (not a true ASP). Percentage growth decelerates as the base rises. Steady net additions are a judgment, not a finding of saturation, and only two post-relaunch increments support the add. U.S.

Orange Book patents are listed through 2029; they are a named bear lever and are not used to invent a base-case fade. The next-generation H-N08 pre-filled syringe is expected H2 2028 / H1 2029 but is unapproved and is not in the base as a replacement product. (D15, TRIESENCE units / patents.)

S24 Q4 2027 standard-review PDUFA is the dated approval window in the November 2026 deck; a source that gives only a year uses that fiscal year-end of 31 December 2027 for the Melt FDA-approval cash on the cash_share_adjustments schedule. (D3 / D15, G-MELT timing.)

S25 Probability is 1 in the base because the unweighted 2028 G-MELT launch already in the revenue path is conditional on approval; the cash is not haircut a second time. The payment remains outside EBITDA. (Melt Schedule A; S12.)

S32 Base YOCHIL (MELT-210) revenue is an unweighted, conditional path on the company's expected 2028 timing. End-of-Phase 2 was completed in the quarter ended 30 June 2026 (letter dated 10 August 2026); Phase 3 is still ahead and there is no NDA in 2026, so a 2028 launch is tighter than G-MELT's. Units = penetration x (1/3) x that year's IHEEZO customer units, with the same penetration fractions as the G-MELT ramp (60/750, 1/3, 2/3, 1, 1). The official IHEEZO unit identity is used (FY28 327,457, then +41,804 a year). Assumed net price follows the G-MELT $175-$195 path; no YOCHIL price is disclosed. YOCHIL is not placed on the cataract 15% target, and G-MELT is not given the IHEEZO third. Compounded MKO remains in ImprimisRx and is not double-counted. The broader diagnostic, endoscopic and anesthesia-induction market is upside and is not in the base. (D20, D22, D15, P4.)

S33 Assumed modest YOCHIL program on the existing Surgical team: $6.0 / $10.0 / $8.0 / $8.5 / $9.0 / $9.5 in FY2027E-FY2032E (about half the G-MELT program), with a +/-40% band. Not zero and not a second sales force. Starts in FY2027E because Q4 2026 already includes a $4 G-MELT filing allowance and accelerated R&D that already names YOCHIL. (D3, G15, G23.)

S34 Combined base G-MELT + YOCHIL sales first exceed $100 of Annual Net Sales in FY2030E ($109.399). The first commercial cash milestone is dated 31 December 2030, the year-end of the year the threshold is hit. Payment is due within 75 days after that year-end. (Melt Schedule A; C12, C16.)

S35 Probability is 1 on the unweighted base path that already includes those product dollars; the cash is not haircut a second time. It is not an EBITDA item. (Melt Schedule A.)

S36 Combined bull G-MELT + YOCHIL sales first exceed $100 of Annual Net Sales in FY2029E ($101.078). The item is dated 31 December 2029. Payment is due within 75 days after that year-end. (Melt Schedule A.)

S37 Probability is 1 on the bull path that reaches the $100 trigger in FY2029E. The cash is not an EBITDA item. (Melt Schedule A.)

S38 Combined bull G-MELT + YOCHIL sales first exceed $250 of Annual Net Sales in FY2032E ($275.904). The item is dated 31 December 2032. Payment is due within 75 days after that year-end. (Melt Schedule A.)

S39 Probability is 1 on the bull path that reaches the $250 trigger in FY2032E. The cash is not an EBITDA item. (Melt Schedule A.)

S40 Core cash opex inflation is 4% a year, a named rate tagged [S]. Harrow states no opex inflation rate. Source: BLS Employment Cost Index, private-industry compensation +3.4% over the 12 months to September 2026 (3.5% a year earlier), with benefits +3.9%; inflation-adjusted wages and salaries fell 0.6%, implying consumer prices rose about 3.7%. 4% rounds those up for specialty-pharma field and medical costs. Band 3%–5%; the bear uses 5%. (D23, Table A.)

S41 Variable opex rate on same-store revenue growth: central 4%, band 2%–8%, tagged [S]. It cannot be measured from the history window after the exclusions because the period’s cash-opex increments mix announced step changes (2026 OSD and Surgical sales-force expansion, accelerated R&D) with volume-driven cost, and Harrow does not disclose line-level opex. The base uses 4%; the bear uses 8%. (D1 / D3, SG&A / R&D run rate.)

S42 Named bear cost lever (operating leverage): core cash opex inflates at 5% (top of the S40 band) from the same Q3 2026 run rate and the variable rate is 8% (top of the S41 band). It sits beside the bear volume and product-margin levers. It is not a base-case opex path. (D23 / D1, n/a.)

S43 Contribution margin (mc) is set halfway between the last explicit year’s EBITDA margin (me) and that year’s GAAP gross margin, the band an extra dollar of sales falls in. GAAP gross margin was 75% in FY2024A and FY2025A and 71% in 9M 2026. Base: (0.5393 + 0.7576) / 2 = 0.6484. Bull: (0.5653 + 0.7646) / 2 = 0.6650. Bear: (0.2245 + 0.7557) / 2 = 0.4901. All sit above the reported history of low-20s Adjusted EBITDA margins. (D1 / D2, gross margin history.)

S44 gsnext is FY2033E revenue from one more year of the same build divided by FY2032E revenue, minus 1. Base FY2033E 1,838.379: VEVYE +102.582 (constant TRx add) to 879.926; IHEEZO +16.999 to 218.152; TRIESENCE +43.158 to 339.536; Other branded +5.5 (components’ last steps) to 135.5; Other revenues 0.5; compounding +2 to 79; G-MELT 750,000 units at $200 = 150.0; YOCHIL 536,477/3 units at $200 = 35.765. gsnext 10.69%. Bull FY2033E 2,064.574 (VEVYE 950.321, G-MELT 1.4 million units = 280.0, Other branded 151.76, compounding 88.48, Other revenues 0.56,

others as base): gsnext 11.88%. Bear FY2033E 641.437 (VEVYE flat 264.655; IHEEZO 158.655; TRIESENCE ×0.92 to 75.127; Other branded 76.32; Other revenues 0.28; compounding 44.4; G-MELT +7 to 22; YOCHIL 0): gsnext 0.86%. (drivers.csv, n/a.)

S45 Finagle defaults filled in this run, not set by us: cost of equity "0.055 plus the 10-year yield"; terminal growth "Terminal growth equals the 10-year yield"; "Terminal ROIC of 15 percent"; tax "US federal statutory tax rate. No marginal rate was stated"; cost of debt "Year-0 interest divided by year-0 debt" (interest $24.18 from Yahoo Finance; debt $250.0 from the 10-K); debt policy "No debt policy was stated, so the target leverage is the year-0 Debt/EBITDA" (4.04x) and "The target applies from the first forecast year"; working capital "No working-capital change was stated"; distributions "No distribution was stated"; "No net operating loss was stated"; "No non-operating assets were stated". (D24, case provenance.)

Calculations

C1 FY2026E line = nine-month 2026 printed actual (A2) + Q4 2026E assumption (S1–S5 / P2). VEVYE 90.033+50.08=140.113; IHEEZO 42.833+38.287=81.12; TRIESENCE 20.134+13.404=33.538; Other branded 16.944+15.0=31.944; Other revenues 0.327+0.2=0.527; Compounding 43.890+17.0=60.890; G-MELT 0; total 214.161+133.971=348.132. Inputs: A2, S1, S2, S3, S4, S5, P2.

C2 Implied Q4 2026 revenue to hit the reaffirmed $350–365 range: 350−214.161=135.839 and 365−214.161=150.839. Inputs: A2, G2.

C3 H1 2026 revenue 44.203+70.661=114.864. First-half 2026 calibration coefficient vs. the original H1 guide of $133–153: (114.864−133)/(153−133)=−0.907. That coefficient is recorded but is not applied to the full-year range, because the prompt requires a bottom-up base and the $350–365 revenue range was reaffirmed after the third quarter. Inputs: G4, A2, P1.

C4 Q3 2026 cash operating expenses = GAAP opex $63.432 − SBC $3.728 − depreciation $0.446 = $59.258. Q3 Adjusted EBITDA identity check: gross profit $74.903 + amortization $5.572 − cash opex $59.258 = $21.217. Inputs: A4.

C5 Q4 2026E cash opex $68.258 = $59.258 + $5.0 (TYRVAYA partial) + $4.0 (G-MELT filing allowance). Q4 2026E GAAP gross profit = 133.971 × 75.5% − $2.5 inventory step-up = 98.648. Q4 Adjusted EBITDA 35.962 = 98.648 + amortization add-back $5.572 − cash opex $68.258. FY2026E Adjusted EBITDA 43.289 = 9M $7.327 + Q4 35.962. FY2026E GAAP gross profit = 9M $152.311 + Q4 98.648 = 250.959; FY2026E GAAP gross margin 72.1% = 250.959 / 348.132. Inputs: C4, S10, S11, A4.

C6 FY2025 Other branded excluding TRIESENCE = 25.326 − 9.900 = 15.426, using the printed $9.9 FY2025 TRIESENCE figure at one decimal (full-year TRIESENCE was not a 10-K line; it is split here to match the 2026 reporting presentation). Inputs: A1.

C7 CMS pass-through and J-code stock milestone: $47,942,367 / $43.13 ≈ 1,111,578 shares (contractual, not marked to market). Dilution vs. 37,533,160 shares outstanding as of November 5, 2026 is about 3.0% if and when issued. Inputs: A9, A6.

C8 Sum of Melt commercial cash milestones on Schedule A: 10,024,313.10+25,017,198.78+50,034,397.56+74,964,428.40+99,981,627.18=260,021,965.02. Adding the $87,167,940 approval cash and $47,942,367 stock milestone gives a total contingent package of $395,132,272.02 if every milestone is achieved on time. These are payments to non-Harrow former Melt holders; Harrow’s pre-acquisition stake was cancelled. Inputs: A9.

C9 Superseded as the forward cash-opex formula by C14. This tag is retained for the Q3 cash-opex identity and for any earlier references. The previous FY2027E formula (59.258×4×1.03 + 20.0, then 4–5% growth and no G-MELT program) is not the base. Inputs: C4, S10, S9, G5.

C10 FY2025A→FY2026E and subsequent year-over-year growth rates are (year / prior) − 1, using the line and total values in this file. Inputs: A1, C1.

C11 Unrounded Q4 Other branded sketch of $15.3 would produce Q4 total revenue of 134.271 and FY2026E of 348.432, $0.300 above the rounded 133.971 / 348.132 case that is used as the base, and still below the $350 low end. Inputs: S4, C1.

C12 G-MELT revenue (US$ millions) = units x net realization (US$ per unit) / 1,000,000. FY2028E 60,000 x $175 = $10.5; FY2029E 250,000 x $180 = $45.0; FY2030E 500,000 x $185 = $92.5; FY2031E 750,000 x $190 = $142.5; FY2032E 750,000 x $195 = $146.25. Inputs: G18, S15, P4.

C13 Weighted product gross profit before amortization is the sum of line revenue × product GM rates in S19. GAAP gross margin = (product GP − amortization) / revenue. Adjusted EBITDA = product GP − cash opex, which equals GAAP GP + amortization add-back − cash opex. Inputs: S19, S18, S16, A5.

C14 FY2027E cash opex = 59.258×4×1.04 (core, S20/S40) + 20.0 (TYRVAYA) + 12.0 (G-MELT pre-launch) + 6.0 (YOCHIL program) + 4% (S41) of same-store revenue above the Q3 2026 annualized same-store revenue of 397.188 (C17). Later years: core grows 4%; TYRVAYA $20 continues; G-MELT program follows S17; YOCHIL program follows S33; variable is 4% of the same-store increment over that Q3 annualized base (VEVYE, IHEEZO, TRIESENCE, legacy, compounding, other revenues — not TYRVAYA, BYOOVIZ, OPUVIZ, BYQLOVI, G-MELT or YOCHIL). Before 12 November 2026 the increment was measured vs. FY2026E. Adjusted EBITDA = product gross profit before amortization − cash opex, i.e. revenue − cash cost. Inputs: S17, S20, S33, C4, C17, S40, S41.

C15 The FY2026E bottom-up total of 348.132 is 1.868 below the exact $350 low end of the reaffirmed $350–365 range (C2 implied Q4 of 135.839–150.839 versus base Q4 133.971). The shortfall is not closed by a plug. About $1.9 below the low end is acceptable as a prose approximation if the exact difference is also stated. Inputs: A2, C1.

C16 YOCHIL revenue = penetration x (IHEEZO customer units / 3) x assumed net price / 1,000,000, using the official IHEEZO unit identity 327,457 / 369,261 / 411,065 / 452,869 / 494,673 in FY2028E-FY2032E and penetration 60/750, 1/3, 2/3, 1, 1. Result: $1.528 / $7.385 / $16.899 / $28.682 / $32.154. Inputs: S32, P4, S22.

C17 Q3 2026 annualized same-store revenue = 4 × (VEVYE 39.699 + IHEEZO 25.297 + TRIESENCE 10.707 + Other branded 7.595 + Other revenues 0.164 + compounding 15.835) = 4 × 99.297 = 397.188. Q3 2026 is the quarter whose cash run rate ($59.258) is the core. TYRVAYA closed 1 October 2026 and is not in Q3. BYOOVIZ (launched 1 July 2026) sits inside printed Other branded and is not separable; the printed bucket is used as-is rather than an unmeasured split. Removing the illustrative $2.92 (S4) would lower the baseline to 385.508 and cut Adjusted EBITDA by about $0.47 a year. Inputs: A2, C4.

C18 Finagle growth leaves: sales_growth and ebitda_growth are year / prior − 1 on totals from FY2025A (year 0) through FY2032E, so they compound back to the revenue and Adjusted EBITDA in this file. me is FY2032E Adjusted EBITDA / revenue. ebitda_basis is total: TYRVAYA (closed 1 October 2026) is inside the Other branded line and the cost build, no further deal is forecast, and its $30 close cash is a dated item on cash_share_adjustments rather than a Finagle acquisition. Inputs: C10, C14.

C19 TYRVAYA close cash −30.0 on 1 October 2026 is listed on cash_share_adjustments because year-0 cash is the 31 December 2025 balance (P5), which is before the payment. The item is past at the price date, so Finagle's discount factor is 1. The up-to-$70 of TYRVAYA milestones is not listed because the company does not expect the first net-sales milestone to be achieved on its anticipated 2027 revenue (G5). Inputs: A23, A21.

C20 acquisition_disclosure is none: no acquisition after TYRVAYA is forecast; TYRVAYA closed 1 October 2026, is inside the explicit lines and costs, and its $30 close cash is a dated cash_share_adjustments item. Inputs: C18, A23.

C21 Year-0 equity raise under P6. Opening cash 72.927 (P5, A21) plus the present value of the cash schedule at Finagle's cost of equity (10.498%, price date 12 November 2026) is base -41.547, bull -55.804 and bear -14.766, so each scenario would otherwise start with negative cash. The raise is the shortfall rounded up to the next $50: base $50, bull $100, bear $50. Issued at today's price (Finagle's fetched price), so no price is stated on the item. Not a company-announced offering. Inputs: P6, P5, A21, A23, A15, A18.

C22 Cost sensitivities (derived): core inflation +1 pt = 59.258×4×(1.05^6 − 1.04^6) = 317.646 − 299.921 = 17.725 of FY2032E cash opex; variable rate +1 pt = 1% × (1,377.875 − 397.188) = 9.807 of FY2032E cash opex; bear operating-leverage lever = FY2032E Adjusted EBITDA 142.781 with the lever vs. 167.358 without (−24.577), and FY2027E 110.227 vs. 115.656 (−5.429). Inputs: S40, S41, S42, C14, C17.

C23 Revenue FY2032E / FY2027E = 1,660.779 / 612.684 = 2.71; cash opex FY2032E / FY2027E = 387.648 / 290.893 = 1.33 (up about a third). Inputs: C10, C14.

C24 Valuation arithmetic (derived) from D24 rows: PV of FCFE = Σ FCFE_t / 1.10498^t for t = 1–10, and PV of terminal value = [terminal FCFE / (0.10498 − 0.04998)] / 1.10498^10. Base 3,004.97 + 2,152.51 = 5,157.48 (Finagle equity value), terminal share 41.7%; bull 3,601.01 + 2,583.19 = 6,184.19, 41.8%; bear 361.18 + 176.27 = 537.45, 32.8%. Value per share vs. price = value / 29.37 − 1: base +351.8%, bull +421.9%, bear −49.9%. Base equity including adjusted cash 5,157.48 + 8.45 = 5,165.93. Inputs: C25, A24.

C25 Finagle outputs as printed in D24: value per share base 132.69, bull 153.28, bear 14.71; equity value 5,157.48 / 6,184.19 / 537.45; firm value 5,407.48 / 6,434.19 / 787.45; terminal WACC 9.20% / 9.21% / 8.75%; adjusted year-0 cash 8.45 / 44.20 / 35.23; shares 38.93 / 40.63 / 38.93 million; cash-schedule present value −64.47 / −28.73 / −37.69; year rows as in Figures 9a, 9b and 11. Inputs: D24, C18, C21, S43, S44, S45.

C26 Medium-term organic growth (derived): base FY2033E 1,838.379 − FY2032E 1,660.779 = 177.600, and 177.600 / 1,660.779 = 10.69%; VEVYE supplies 102.582 / 177.600 = 58% of the increase. Bull 2,064.574 − 1,845.367 = 219.207, or 11.88%. Inputs: S44, C10.

Prompt / task overrides

P1 Prompt [P]: produce an explicit seven-year calendar fiscal forecast FY2026E–FY2032E with product drivers and EBITDA/costs; do not back-solve or scale product lines to guidance or consensus; use bottom-up product forecasts as the base; do not run a valuation; record four views; treat seven years as a method override of the usual two-year explicit window. (task brief.)

P2 Prompt [P] dated 11 November 2026 (America/Toronto): replace the prior retained chat base (VEVYE 51.1 / 255 / 326, IHEEZO 38.3 / 122 / 140, TRIESENCE 14.7 / 67.5 / 86.4) with the rule-based product rebuild authorized that day. Use constant quarterly net adds of 49,538.5 reconstructed TRx for VEVYE and 5,044 customer units for TRIESENCE through FY2032E; hold VEVYE Q4 net price at the Q3 derived ratio plus 10% and hold that exit thereafter with no unquantified coverage increment and no invented later-year price; for IHEEZO use a constant annual unit add of 41,804 allocated on 2025 seasonal weights from a cleaned 2026 four-quarter rate of 243,849, Q4 2026E demand of 75,811, Q4 dollars at Q3 realization times the 2024 recognition lift of 1.242, and later-year revenue at demand times that realization with no net full-year inventory build. Do not scale to the $350–365 range or force the more-than-$40 Adjusted EBITDA floor. (task brief.)

P3 Prompt [P]: official reported lines follow current disclosure (VEVYE, IHEEZO, TRIESENCE, Other branded excluding TRIESENCE, Other revenues, Compounding). G-MELT is a separate memo line so it is not mixed into the specialty residual. MKO Melt remains in compounding and is not double-counted as branded G-MELT. (task brief.)

P4 Prompt [P] dated 11 November 2026 (America/Toronto): David May approved the YOCHIL / G-MELT build with one change - use 15% of the 5 million U.S. cataract-surgery target for G-MELT, not 10%. Quote: "Mko melt is used in 10% so an fda approved version should be higher than 10%. Use 15%. The rest looks good." YOCHIL is a separate memo line, not mixed into Other branded, with units = penetration x (1/3) x IHEEZO customer units and the same penetration fractions as the G-MELT ramp. Do not put YOCHIL on the cataract 15% or give G-MELT the IHEEZO third. (task brief.)

P5 Prompt [P], David May standing instruction recorded 2 November 2026: year-0 cash is the last fiscal year-end cash plus short-term investments (e.g., FY2025), adjusted for equity raises made during the following year, and the share count is raised from the last fiscal-year figure to reflect those raises. (standing instruction, n/a.)

P6 Prompt [P], David May standing instruction recorded 2 November 2026: where a scenario would otherwise run out of cash, add a year-0 equity raise sized to keep cash from going negative, rounded up to the next $50M. (standing instruction, n/a.)

P7 Prompt [P], David May, 12 November 2026 (America/Toronto): “update the report as needed and run the finagle too”, after “pull repo”. This lifts the earlier no-valuation instruction in P1 for this run. (chat, n/a.)

Not verified

The November 2026 stockholder letter (D3) and corporate presentation (D15) were retrieved from the SEC EDGAR accessions cited above. The Q3 2026 call transcript is cited from the GitHub ceochat mirror (D14) plus the original Seeking Alpha recording of the same call; a durable Seeking Alpha article URL is not restated. D11 APA sales-milestone dollar thresholds were not independently re-verified in this pass. D19 is a third-party Zydis comparator; Harrow’s Catalent rate is undisclosed. The 2026 proxy footnote that reconciles Baum’s 3,663,630 beneficial shares to the 2,996,130 shares held directly after the 14 May 2026 Form 4 was not re-quoted, so no option or derivative count is stated [A13]. Current annual compounded MKO unit volume is not disclosed; the 800-institution figure is a company claim [G17]. The Samsung share of net sales and the G-MELT launch budget are not disclosed; the central rates and program dollars in S17–S19 are assumed, not facts. Operating free cash flow after the $30 TYRVAYA close payment has not been independently verified, which is why the $87.2 Melt approval cash is flagged as a funding risk; the valuation discounts it on the cash schedule [S12, C25]. D24 is a local result file with no public URL; its fetched price, yield and share count are as recorded by Finagle on 12 November 2026 [A24]. Nothing in this list is marked unverified because a known SEC or GitHub URL “was not reconfirmed.”

Appendix C – Method

This forecast follows the forecaster method: a bottom-up build of official reporting lines over an explicit horizon, with a separately recorded set of views, a documented cost identity for Adjusted EBITDA, and named bull and bear cases. The explicit window is normally the longest of two years, the guidance horizon, and the Consensus horizon. Here the seven-year window FY2026E–FY2032E is a prompt override, and this update keeps it [P1]. A product launch does not lengthen the window. The 12 November 2026 request added a collaborative valuation [P7]. Bottom-up, top-down, calibrated top-down, and Consensus are recorded for revenue and for Adjusted EBITDA, and each metric has its own base, which may

differ; in this case both bases are bottom-up in every explicit year (Figure 1). Harrow is a calendar-year filer. The baseline is FY2025A. FY2026E is a stub: nine-month printed actuals plus a fourth-quarter estimate, not a sum of four official quarterly lines, because some first-half product prints do not add exactly to the printed half-year totals [A2, C1].

The history used for this case is FY2024A and FY2025A from the 2025 Form 10-K, the printed Q1–Q3 2026 product lines and totals from the 2026 Forms 10-Q and the 9 November 2026 stockholder letter, and FY2024–FY2025 quarterly IHEEZO seasonality from those filings [A1, A2, S2]. Reported results frame the forecast, and the same history is the check for one-time items, the cost base, and the valuation's margin and growth inputs [A3, A5, S43]. The November 2026 corporate presentation and the 9 November 2026 letter are the latest primary documents for pipeline timing and guidance [D3, D15]. A full nine-quarter set of earnings-call transcripts was not re-opened for this update. Where a quarter's call was not re-read, the corresponding Form 10-Q or stockholder letter is the document used. No new transcript, Consensus, or CEOchat pull was made. Because that transcript window was not completed from primary sources, this report does not claim full method compliance on history coverage. M&A-related costs are treated as one-time unless the company says they continue. TYRVAYA incremental operating expenses of about $20 a year are treated as ongoing while the product is in the book [G5]. G-MELT and YOCHIL sit inside the seven-year window because their stated 2028 launch timing falls inside it; they are written year by year from FY2028E as memo lines and are not added on top of a total that already includes them [S15, S32, P1, P4]. A 2028 YOCHIL launch is tighter than G-MELT's, because Phase 3 is still ahead [G24, S32]. The 15% G-MELT unit rate is a task instruction; a 10% current annual MKO share is not a verified printed figure in the sources used [P4, G22, G26].

Four views are recorded for each explicit year. Calibrated top-down is absent for FY2026E because first-half 2026 revenue was below the original first-half range of $133–153, and that miss is not applied to the reaffirmed full-year $350–365 range [G2, G4, C3, P1]. No post-Q3 2026 Consensus pull was taken [P1]. The revised Adjusted EBITDA outlook is a single-point floor of more than $40, including more than $33 in the fourth quarter [G1]. The FY2026E revenue base of $348 sits about $2 below the $350 low end [C1, C15]. The FY2026E Adjusted EBITDA base of $43.3 is the cost build and sits above the floor of more than $40 [C5].

Adjusted EBITDA is revenue minus cash cost. In this build that is product gross profit before amortization minus cash operating expenses, the same identity checked on the Q3 2026 letter: gross profit plus amortization minus cash operating expenses, where cash operating expenses are GAAP operating expenses minus stock-based compensation minus depreciation [C4, A4, C13, C14]. Inventory step-up is not listed as an add-back and is not added back [S11]. Melt and TYRVAYA contingent cash and stock are modelled as contingent M&A and dilution, not as EBITDA deductions [S12]. Milestone payments the company owes, similar contingent cash outside EBITDA, and equity offerings are a schedule in the forecast file under cash_share_adjustments [S24, S25, A15]. The base schedule records the $30 TYRVAYA close cash paid on 1 October 2026, Melt FDA-approval cash of $87.2 at 31 December 2027 with probability 1, consistent with the unweighted 2028 launch already in the revenue path, the first commercial Annual Net Sales cash milestone of $10.0 at 31 December 2030, and a year-0 equity raise under David May's standing instruction [C19, S24, A15, S34, A18, C21, P6]. A second FDA-approval cash payment is not added for YOCHIL [S25]. A valuation discounts that schedule at the cost of equity and adjusts year-0 cash and the current share count; the worked figures are the Balance Sheet Adjustments subsection of Section 9, and they are not written up in the Forecast section [C25, P5]. Forward gross margin is a weighted product-level build minus amortization [C13, S19]. Forward cash opex is an explicit bridge from the Q3 2026 cash run rate. The core is that quarter annualized and inflated at a named 4% rate [S20, S40]. The verified TYRVAYA add-on enters once, and the G-MELT and YOCHIL programs are assumed [S17, S33, G5]. A variable cost of 4%, the central rate in a 2–8% band, applies only to same-store revenue above the Q3 2026 annualized revenue that the run rate already pays for; the prior year is only the base for growth rates [S41, C14, C17]. Where a later-year margin moves well beyond the history, the report flags it, shows the bridge, and names a bear lever; it does not haircut the base [S42, C14].

The unit and net-price arithmetic for VEVYE, IHEEZO, and TRIESENCE is in Appendix B under S21, S22, and S23. G-MELT and YOCHIL are memo lines so that they are not mixed into the Other branded residual; compounded MKO Melt remains in ImprimisRx and is not double-counted [P3, P4]. The compounding path was not cut further for the higher 15% G-MELT share, because current annual MKO volume is undisclosed [S13]. Tags follow the method's letters: A for actuals, G for guidance and management statements, E for Consensus (none here), S for assumptions, C for calculations, D for documents, and P for task overrides.
